

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

# TWENTY-FOURTH ANNUAL REPORT.

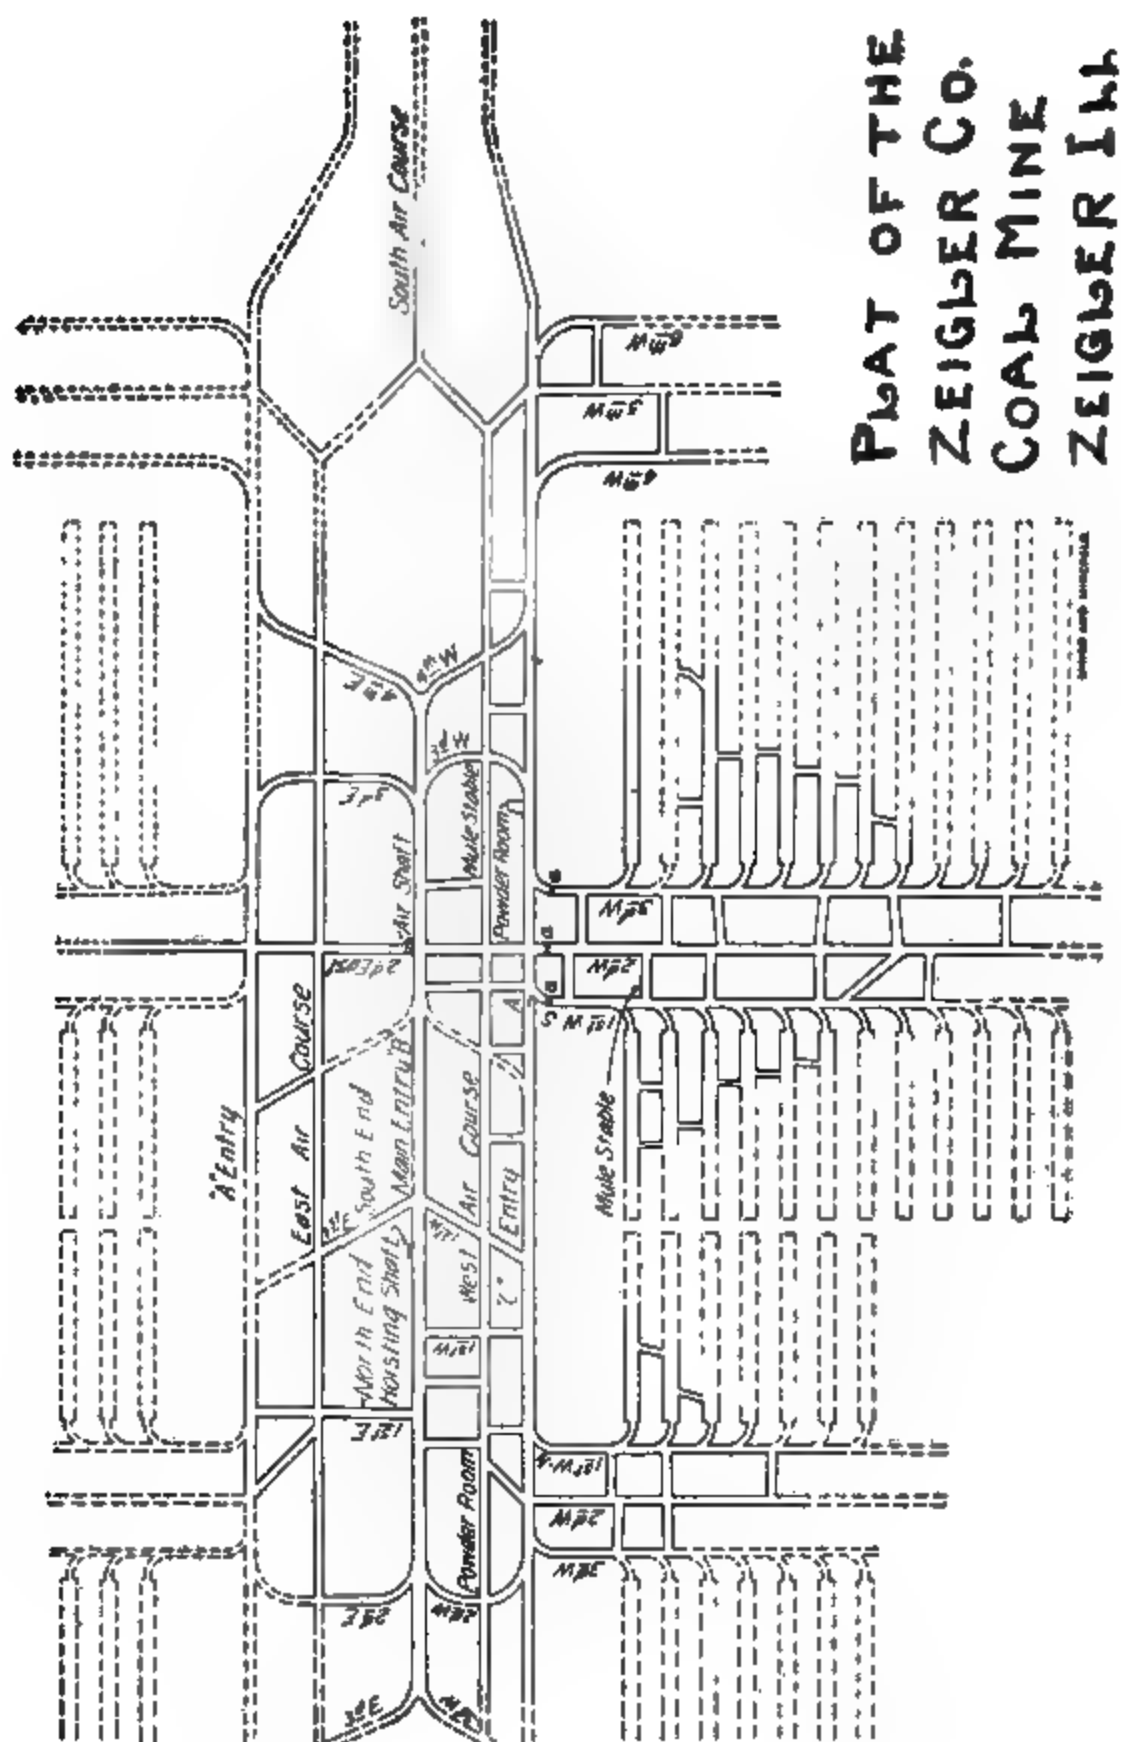

---

STATISTICS OF COAL IN ILLINOIS FOR THE YEAR ENDED JUNE 30, 1905.

---

## THE DISASTER AT ZEIGLER.

On the morning of April 3, 1905, an explosion occurred in the coal mine at Zeigler, Franklin county, Illinois, as a result of which 50 men lost their lives. Of this number William Atkinson, district mine inspector; John Graham, mine examiner; and John Lindsey, miner; died in the mine on the evening of the same day, from the effects of after-damp, while engaged in the work of rescue. Excepting the catastrophe at Braidwood in 1883, where 69 men were lost in consequence of the flooding of the Diamond mine, this was the greatest loss ever sustained in the mining industry of the State at any one time. Immediately after being informed of the explosion, Governor Deneen summoned the State Mine Inspectors and the members of the State Mining Board, and requested them to at once proceed to Zeigler, make a careful and thorough investigation of the premises and the cause of the explosion, and report their findings to him. They found upon their first visit that the conditions existing in the mine prevented a complete examination. Several days later a second visit was made, as a result of which the report following, including plat of the mine, showing the system of underground development was submitted.

APRIL 20, 1905.

*To His Excellency, CHARLES S. DENEEN, Governor of the State of Illinois.*

SIR: In compliance with your request, we the undersigned State Mining Board and State Inspectors of Mines, have visited the Zeigler Coal Company's mine, located at Zeigler, Illinois, for the purpose of investigating the recent explosion at their mine (Apr. 3, 1905), at which place 51 persons lost their lives, and we have the honor herewith to submit the following report:

We find that the mine had not been legally examined since March 23, 1905. Under the Mining law in force in this State, every mine must be examined every morning before the men are permitted to enter the mine. The examination to be made by a duly qualified person, whose ability to perform such duties are certified to by the State Mining Board. This requirement was not observed during the period herein stated.

We also find that the mine had been operated in violation of the Mining laws, in not having the cross-cuts made at the proper distance, which is sixty (60) feet apart.

We find from our own observation, and the plat herewith submitted shows, that entries and rooms have been driven a distance of two hundred and fifty (250) to three hundred and fifty (350) feet ahead of the last cross cut.

We further find that this mine is generating Marsh gas, and when mixed with a certain quantity of air becomes explosive.

Commencing on the south side of the mine, we found explosive gas at the face of entry A, also at the face of crosscut, from east airway leading to entry A, also at the face of the east airway.

We found a large quantity of explosive gas at the face of the south airway.

On opening up numbers one, two and three, west entries, which had been closed on account of a fire originating from the explosion: we examined room number one on third west entry, which had been driven three hundred and fifty (350) feet without a crosscut and found it full of explosive gas.

At the face of the first east crosscut of the east airway, we found a small quantity of explosive gas.

At a distance of five hundred (500) feet north of the hoisting shaft, on main entry B, fire was found, which was caused by the explosion.

On entry C, two hundred and twenty-five (225) feet south of the second west entry, is located a powder room, the dimensions of which are approximately seven (7) feet high, ten (10) feet wide and twenty (20) feet deep, in which the officials of the company state that forty-three (43) kegs of powder, one and one-half boxes of Masurite (which is a low grade of dynamite), also a quantity of detonating caps, the number unknown, all of which had been exploded.

Having this powder and explosives stored in the mine is a violation of the Mining Law.

There was also stored in the powder room a quantity of fuse, which was all burned.

From the statement made by the officials of the company, in which they say the fan was stopped at eleven-thirty (11:30) P. M., March 31, 1905, at which time all of the men were called out of the mine, owing to the ventilation being cut off and the mine generating Marsh gas.

When the fan was stopped, they depended upon the three air compressors to produce ventilation, which was not sufficient to ventilate the mine.

Notwithstanding the above condition, the men were permitted to enter the mine Saturday night, Sunday night and Monday morning and at seven-ten (7:10) A. M., April 3, 1905, the explosion occurred.

The fan was again started at five-thirty (5:30) P. M. on the same day, before the rescuing party entered the mine.

We are of the opinion that the amount of air furnished by the three air compressors was not sufficient to ventilate the mine, but was sufficient to render the Marsh gas explosive.

From the above conditions, we are of the opinion that the explosive gas was first ignited, which caused the powder to explode, thus increasing the intensity of the explosion, thereby destroying life and property.

Respectfully submitted,

*State Mining Board:*

RICHARD NEWSAM, *President.*  
LEE KINCAID, *Treasurer.*  
DANIEL REESE, *V. P.*  
ANDREW FLESHER, *H. E.*

*State Inspectors of Mines:*

HECTOR McALLISTER, *1st District.*  
THOMAS HUDSON, *2d District.*  
JAMES TAYLOR, *3d District.*  
THOMAS WEEKS, *4th District.*  
WALTON RUTLEDGE, *5th District.*  
JOHN DUNLOP, *6th District.*

In order to fully ascertain all the facts, in addition to the investigation made by the State Mining board, and Mine inspection Corps, the Governor delegated Mine Inspector James Taylor, of Peoria, and John G. Massie of Belleville, men of ability and long experience in mining affairs, to supplement the work of the others, each to make a separate investigation and report. The results of their examinations are given in the reports following:

PEORIA, ILL., April 22, 1905.

*To His Excellency, CHARLES S. DENEEN, Governor of the State of Illinois:*

SIR—Complying with your instructions of April 10, 1905, I have made an investigation of the cause of the explosion which took place at the Ziegler Coal Company's mine, April 3, 1905, in which fifty-one lives were lost.

My investigation covered a period of eight days, from April 12 to April 20, 1905.

I found the mine in a very dangerous condition, owing to falls and accumulation of a large quantity of "fire damp." That the few men working in it were being lowered in a bucket attached to a rope with two strands that had been burned through with an electric current, while in use at or near the hoisting shaft. The condition of the rope was known at the time that it was placed on the bucket at the escapement shaft. I immediately had this rope taken off and replaced with a new one, thereby increasing the safety of lowering the men into the shaft with the bucket, a distance of 417 feet, until we were able to place the hoisting shaft in condition to use the cages.

While making an inspection of the mine, I found it in a very dangerous condition owing to the large accumulation of fire damp and an extensive fall on B entry. I immediately secured the services by wire of the following mine managers: Mr. Harry Barlow, Johnson City; Mr. Robert Winning, Carterville; Mr. D. Church, and Mr. Harry Jones, Marissa. The last two named gentlemen I placed in charge, as mine examiners, and they reported each examination to me in person night and morning, filing the same report in the new inspection book secured for that purpose. Mr. Harry Barlow had charge of the day shift, and Mr. R. Winning the night shift. Mr. Thomas Watson, having a thirty day permit to act as mine manager, and being one of the company's employes, had charge of securing men for each gang and acted as my assistant in going through the mine while making the investigation.

Having restored the ventilation in part, I measured the air-current, April 13, 1905, between the first crosscut and the first east at B north, and found the velocity of the air to be 860 cubic feet per minute, and the area of the entry to be 87 square feet. The quantity of air passing at this point being 76,820 cubic feet per minute. With this quantity of air passing down the shaft we found that ventilation could not be restored at the working faces of the north A entry, 3d east crosscut, 4th east crosscut, east air-course, west air-course, south air-course and C entry, which were full of fire damp, until we had placed brattice cloth along the rib of each entry, to conduct the air-current to the working face, which in some instances was a distance of 325 feet ahead of the last crosscut. Had the crosscuts been placed in compliance with the mining law (not more than 60 feet apart) we should have met with little difficulty in removing the gas; but having to put up a brattice cloth the distance above mentioned and remove this amount of gas safely required the most careful attention, but we succeeded in finally removing all the gas that had accumulated in these entries.

From an examination of the mine examiner's report book, we find that explosive gas had been found and reported as being in the 4th east and airway off it, and in crosscut off 4th west on south, danger sign up, gas in 1st room on north in airway south, and in airway off 4th east south, gas in B airway south, and in 4th east south, and A airway; rooms on north side way have collected gas since time of last examination. Find gas in A and B airway south, gas in east off air shaft. These reports were made by John Graham, the certificated mine examiner, and extend from Sept. 1, 1904, to March 22, 1905. He made two examinations every twenty-four hours, one before the day men went in the mine and one before the night men entered. The report book shows that no examination had been made of the mine since March 31, 1905, and from the same source we learn that there had been no examination made since March 22, 1905, in compliance with the following section of the mining law:

Section 8, par. (g). "It shall be unlawful for the operator of any mine to employ, or suffer to serve as mine examiner, any person who does not hold a certificate of competency issued by the State Mining Board: *Provided*, that any one holding a mine manager's certificate may serve as mine examiner."

Mr. Thomas Carraher, a non-certificate man, made the examination March 23 and 24, and report book shows no examination March 25 and 26. Mr. Mike Canfield made the examination for March 27 and March 31, 1905. He is not a certificated mine examiner or mine manager.

I find that this mine is generating marsh gas at the working faces, which becomes explosive when mixed with a given quantity of air. I found explosive gas in large quantity in entry A and in crosscut leading from entry A to east air-course. In this crosscut which is 100 feet long they had been taking up the bottom to a depth of 3 to 4 feet, making the height at this place from 14 to 16 feet, where the gas had accumulated in large quantity. It was here where the mine manager, with sixteen men, on the morning of the explosion, had gone to work with naked lamp, and it was at this place these bodies were found after the explosion.

I found fire damp in large quantity in the fourth east and airway off it, on south side, also in the east airway, south, and in the south airway. In the crosscut and south airway there were no less than 24,000 cubic feet of explosive gas. In the fourth, fifth and sixth, west off entry C, and from the crosscut to the west airway to the face of entry C, explosive gas in large quantity was found on my first visit to this place. In the first, second and third west entries, a fire had been started by the explosion, and these entries had been closed up by wood stopping. On opening up these entries we found them full of gas and that there was a cloth brattice across the first west entry at a distance of about 50 feet from the wood brattice at the mouth of the entry. It became necessary for some one to take down this brattice cloth and go through the deadly gas in order to get to it. The company having two Vajen-Bader head protectors which had never been used, I put one on and entered the poisoned atmosphere of No. 1 entry and succeeded in taking down

the brattice, thereby allowing the fresh air to enter at No. 3 entry and drive out the gasses from Nos. 1 and 2 entries. This could not have been accomplished without a head protector. Every State inspector should be provided with a head protector.

We were able to get as far as the second crosscut by noon the following day and found that the room on the third entry was full of fire damp. The map shows this room to have been driven a distance of 350 feet without a crosscut. Two hundred and twenty-five feet south of the second west entry, on entry C, is located a powder room in the pillar, the dimensions of which are approximately seven (7) feet high, ten (10) feet wide and twenty (20) feet deep, in which the officials of the company stated that forty-three kegs of powder and one and one-half boxes of masurite had been stored, also a quantity of detonating caps, the number unknown, all of which had been exploded.

The storing of the above explosives in the mine was a violation of Section 20 of the mining law, which is: "No blasting powder or other explosive shall be stored in any coal mine, and no workman shall have at any time more than one 25-pound keg of black powder in the mine, nor more than three pounds of high explosives."

Directly in front of the opening into the powder room is a double track for hauling coal to the bottom of the shaft; also a double trolley wire for the electric motor. The track has not been disturbed and the trolley wire nearest the powder room is in the same position as before the explosion, while the second trolley wire is off three of its braces. In other parts of the mine, north and south, the trolley wires are twisted in every conceivable shape, and pit cars piled up on each other.

I found that the ventilating fan had been stopped at 11:30 p. m., Friday, March 31, 1905, at which time one of the mining officials gave instructions to call out all the men from the mine owing to the ventilation being cut off. The compressors were at work at the time of stopping the fan and were depended upon to produce ventilation from 11:30 p. m., March 31, to April 3, the morning of the explosion. The three compressors were expected to ventilate this mine, having no less than 1,786,000 cubic feet of space in entries and rooms opened up in which forty-seven men and five mules were working. The catalogue capacity of these compressors is given at 1,200 cubic feet of free air per minute. Taking this as a basis, we have for the three compressors 3,600 cubic feet of air per minute.

Section 19 of the mining law states that throughout every coal mine there shall be maintained currents of fresh air sufficient for the health and safety of all men and animals employed therein, and such ventilation shall be produced by fan or some other artificial means.

The fan being stopped, the men were permitted to enter the mine on Saturday and Sunday night, and again on Monday morning, the day of the explosion, without the mine having been examined by any one. This is shown by the inspector's book. The quantity of compressed air produced at the working face was sufficient to bring the marsh gas to the explosive point, but it was not sufficient to produce a lawful amount of ventilation for the men and mules in the mine at the time of the explosion.

In conclusion, I am of the opinion that the explosive gas in the third east crosscut from entry B to entry A, known to the miners as the stone heading, was ignited accidentally by a common miners' lamp (an open lamp) in possession of one of the seventeen men who had gone there to work, as all of these men had naked lamps.

This mine had been operated up to the time of the explosion in violation of the mining laws.

Respectfully submitted,

JAMES TAYLOR,  
*State Inspector of Mines, Third District.*

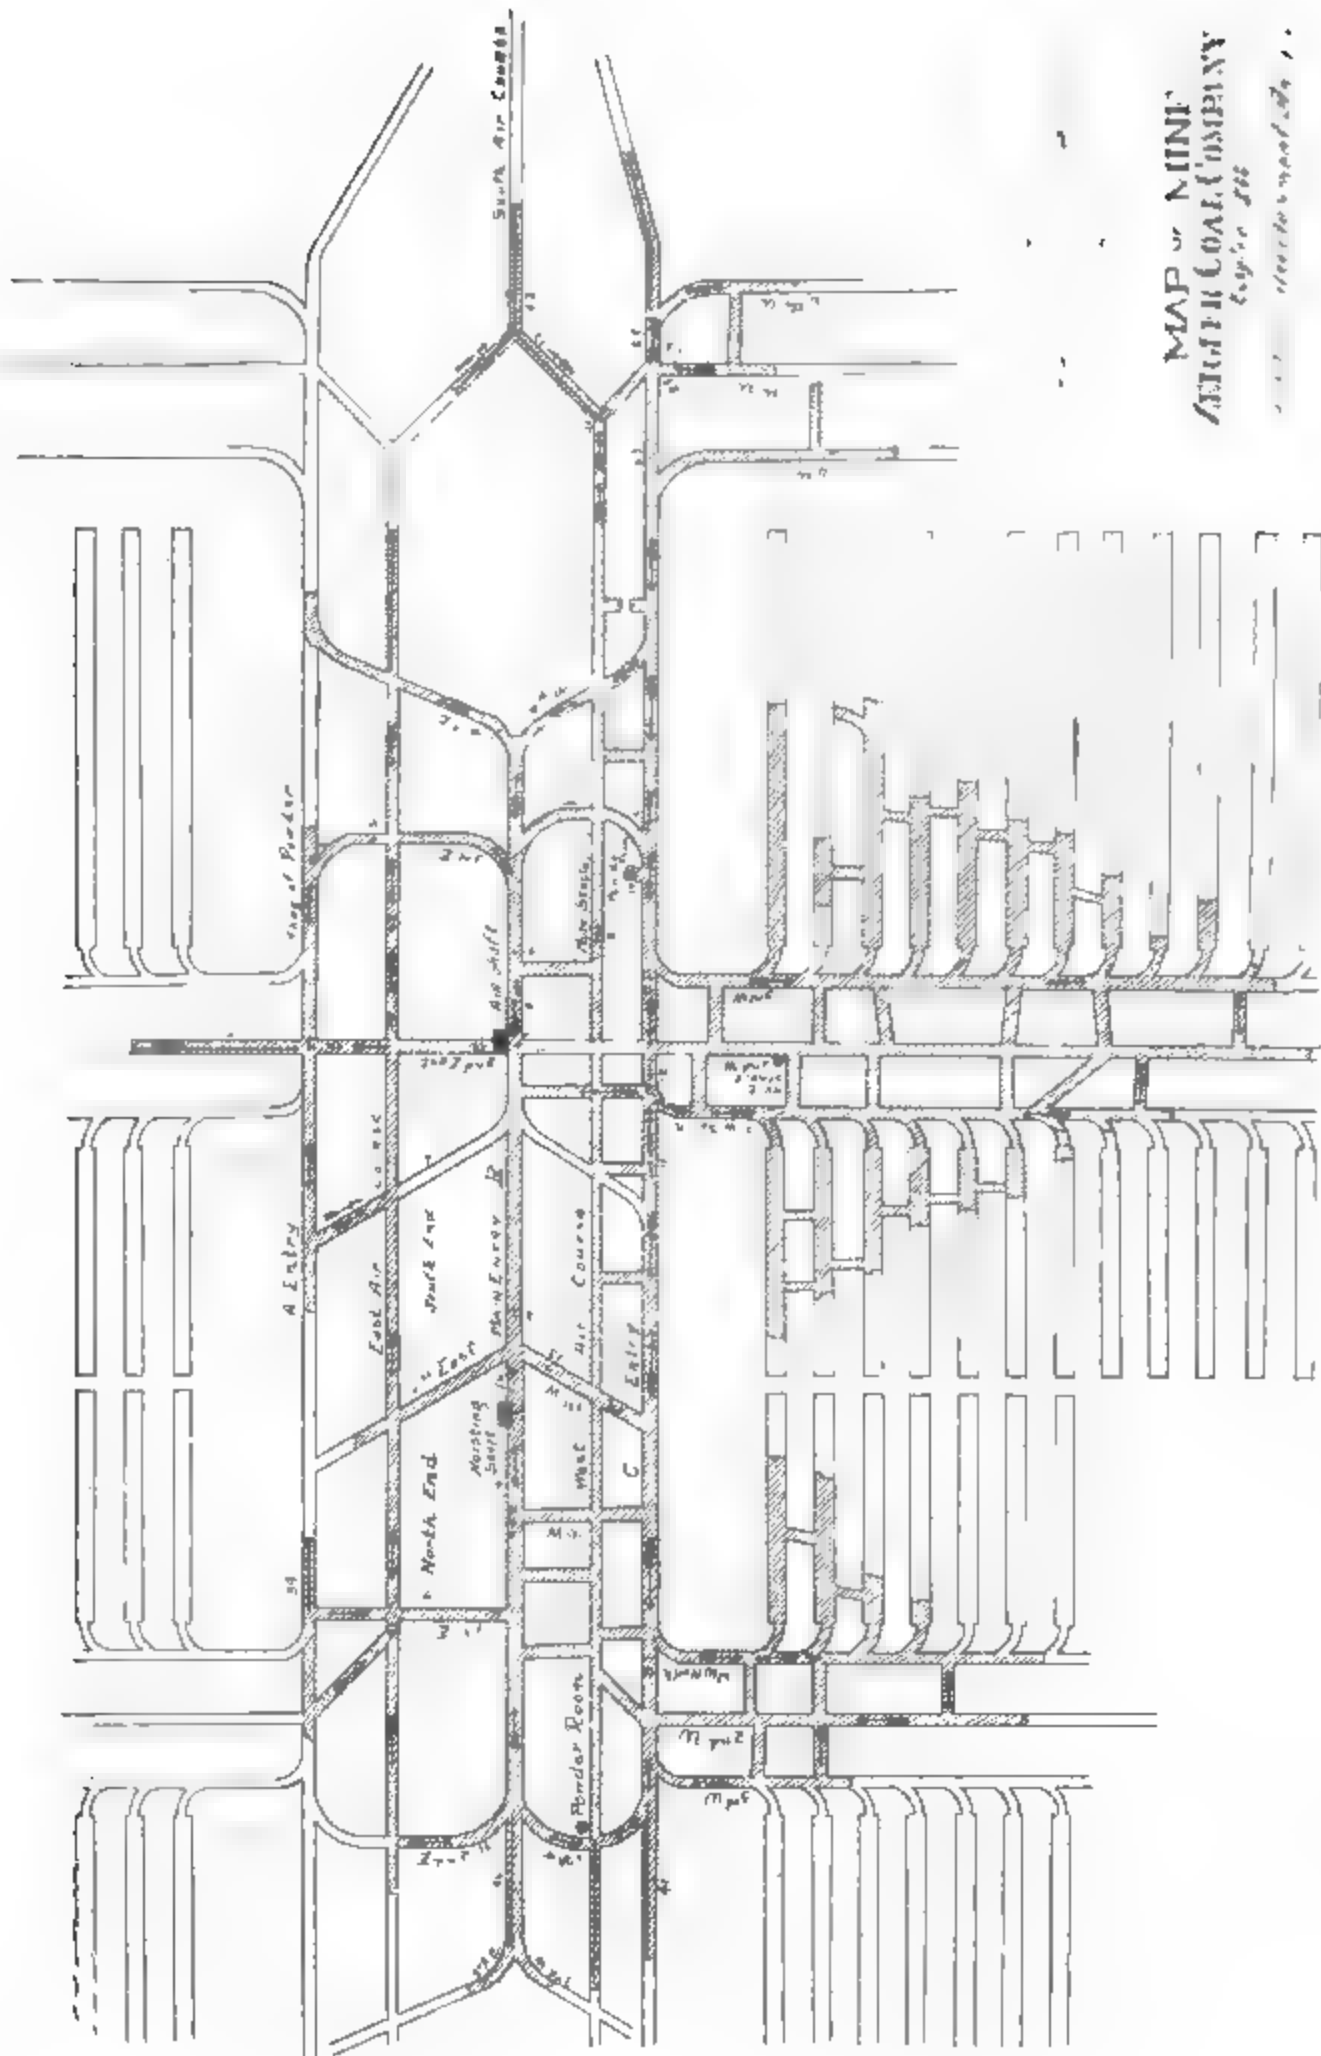

BELLEVILLE, Ill., April 25, 1905.

*Governor CHARLES S. DENEEN, Springfield, Ill.*

DEAR SIR—In obedience to your instructions, I started to Ziegler, Ill., on the 12th inst., arriving the morning of the 13th, and at once entered the mine for the purpose of investigating the cause of the disaster in which fifty men lost their lives.

The hoisting shaft, air and escapement shafts are 500 feet apart. They are timbered with 12 by 12 inch timbers about four feet apart and 3 by 12 inch backing, running up and down. The shafts are 417 feet deep and were lined inside with 1 by 12 inch boards. The air shaft was equipped with engine and bucket and a stairway; the lining of this shaft and most of the stairway were blown out, crushed to fragments and scattered over a large area. A skip in the hoisting shaft hanging twenty-five feet above the coal and weighing six and a half tons was blown up to the top of the tower, a distance of 527 feet, and wedged so tight that it stayed there until removed by the iron workers. The other skip was at the surface. Three iron workers were repairing it at the time it was blown out and up against a four-foot truss, bending it out of shape and badly injuring the workmen. On going to the bottom of the shaft I found the most complete wreck I ever saw. There were but few places at that time that could be entered with safety, owing to the presence of dangerous and deadly gases. We, however, after some time, restored the ventilation, so that all the mine except a small part of the first, second and third west entries could be explored.

I herewith submit a plan of the mine. The shaded lines show the work done, the plain lines show the work in contemplation. The single-head arrows show the travel of the air before the explosion; the double-head arrows show the direction of the forces, and the points where the greatest disturbances occurred. The small dots show where the men were found; the marks O show where the mules were found, the dotted lines show where the brattices were located; places marked D with a line across the entry is where doors were located. The line across the entry and letter C is where curtains were hung to change the course of the air. At the point marked 1 east side, south of the shaft, eighteen men were found, scattered along the entry for a distance of about 100 feet. At 2 Mr. Baxter, the mine manager, was found. At 3 I found a keg of powder; it had been opened and some powder taken out, possibly three to five pounds, a leather glove was stuffed in the hole for a stopper. About eight feet north of this keg was a pile of 60-pound rails, and on one of them was a powder keg which the rail had passed through about eight feet, when the powder had ignited; it is still on the rail. I may say here that only one keg of powder was found in the mine and it was within a few feet of where terrific forces and fire had passed through. At 4 one man was found; at 5 one man; at 6 one man; at 7 is where William Atkinson, State Inspector of Mines, and John Lindsay were found, between the rails; John Graham, mine examiner, was found just at the corner of the pillar of the first west entry. They had evidently gone due west after descending the shaft, to the mouth of the second west, then turned north for the purpose of exploring the first west entry. At 8 three men were found; at 9 two men; at 10 three men; at 11 five men; at 12 five men; at 13 two men; at 14 two men; at 15 one man; at 16 one man; at 17 one man; total, fifty men. There is one yet to be accounted for; it is believed he is under a large fall of rock at the hoisting shaft. At 15 three mules were found; at 16 one mule; at 18 there was a terrible wreck of mine cars for a distance of about 100 feet; at 19 there was a wreck of mine cars, the forces having come east out of the first west entry and met an equal or greater force coming south along C entry. This was a bad wreck, the fact of the cars being between the first and second west entries goes to show that the greatest force traveled south until the passage was partially blocked, then it turned east in the direction of the air shaft. At 20 there was another wreck; on the last car, on the north end of the wreck, there was a powder keg stuck fast on the corner of a car; it had struck the car while flying through the air and bent around the corner of the car and stuck fast; it required considerable force to remove it. At 21 the forces were exerted north, as shown by the double arrow; at 22 the forces were northeast; at 30 the forces were south; at 29

the forces were southeast; there was a wrecked motor and some wrecked mine cars here. At 32 there was a wrecked car and two forces met here, one going south and the other going east or rather northeast, as shown by the double arrows. At 23 the forces were south; there was a wrecked car here. At 24 there was a wrecked motor. At 25 the forces were south; at 33 was a wreck of mine cars; at 34 the powder room was located. There was said to be forty-one kegs of powder in it; I counted eighteen exploded kegs in the room in front of this room.

The track was uninjured; the trolley wire nearest the entrance to this room was not blown down; the trolley wire over the track farthest from the room entrance was blown loose and hanging midway between roof and track. North and south of this room the wreck of cars, track and timbers was most complete. The timbers in the mine were nearly all blown down, all over the mine, and nearly all of them, with but one exception, and that was on main B entry between the two shafts; and many of them were blown out and a large fall of rock on this entry, as a consequence. At 35 the forces were west; at 36 they were west; at 37 the forces were south; at 38 and 39 they were west; at 40 the forces were east; at 41 the forces were south.

This mine, I understand, was laid out by a Chicago firm of engineers; the bottom is their own work I suppose. After leaving the bottom, they have copied the three entry system of J. G. Massie, which was designed by him for a separate current of air for each entry, but you will observe from the map that this has not been carried out. At the third east, south side, the air was split and a part of the volume going east to the east air course, a part continuing to A entry, thence north to second east, thence north and west to second east, thence north to first east, thence southwest to main B entry and out to the surface. The other current went south to fourth west, to west air course to cross cut, southwest, thence up sixth west, through cross cut and down fifth west to C entry, thence down C to third west; up third west to last crosscut, thence through to second west, thence to first west, thence out to C entry, thence north to first west north, thence west to last crosscut, thence through last crosscut to second west, thence through third west, thence east to C entry, thence north to crosscut east, thence up second east, thence down east air course to first east, thence down first east to main B entry, thence north to shaft and out.

This mine is laid out for the adoption of the best system of ventilation now known to the science of mining, but the ventilation applied to this system is the oldest and most primitive known to mining. The brattices I have shown in this map for conducting the air around the mine were all blown out by the explosion. The general manager informed me that they were all in before the explosion, I could find no evidence that they were in, neither could I find any evidence that they were not in, but to take the most charitable view of it, and assume that they were all in, and the air passing, as indicated by the single arrows. How this system can dilute, and carry off the gases generated in the dead ends, is more than I can understand. From 29 to 30 and back northeast to 22 south air course, they had a brattice. At 35 they had a fan placed, exhausting air into a 10 x 12 inch box pipe, and discharging it at the face indicated by 22; on the supposition that the gases generated at the face, would be diluted and passed around the brattice and up the south air course to the face, perform a like mission there and be returned to 29, where the main ventilating current was passing, and from there be carried to the surface.

The brattice in main C south, was supposed to perform a like mission, only they had a two-inch air pipe in this entry. At 36, second east entry was another brattice, with a two-inch pipe to the face. At 39 A entry was another brattice.

On B entry, and third east and third west, at extreme north was a brattice, with a two-inch pipe to face; and in west air course and entry C were brattices, all expected to blow gas out on to the main ventilating current, thence to the surface. At 35 they had their fan. At 36 south air course is where I found it a total wreck. Their idea was to blow sufficient air to the face with this underground fan, to blow all gases around the entire length of the brattice and out to the main current. This is clearly an impossibility.

What it did do, was to force air from the fan through the pipe to the face until the entry was full, then it would flow back to the fan, reenter the fan and again be discharged at the face and continued to repeat this operation. With the entries that had the pipes in them they could partially dilute the gas while the air current passing the outer end of the brattice would back up for some distance into the entries and some of the gas would diffuse to such an extent as to permit them to work for a limited time.

Before proceeding further, I will briefly discuss pipe ventilation. The method of blowing air through pipes into a mine, is utterly impracticable and inimical to thorough ventilation; in effect it is nothing more or less than laying a pipe within a pipe and forcing a current of air through a passage that needs no ventilation, (that is the pipe), and conducting the air in a close pipe past the very object for which it is sent into and through a mine.

They have three Ingersoll-Sergeant compressors at this mine, each, when running up to the limit of its capacity, capable of compressing 1,100 cubic feet of free air per minute, or 3,300 for the three. With this air they run the engine at the air shaft to lower material; run a double ram in the bottom of the hoisting shaft to load the skips; and to run a pump at bottom of hoisting shaft; and to run three air drills; and for ventilating the places that are bratticed at 7. In number, I am informed, this machinery was run up to the time of the explosion, 7:15 a. m., April 3. I am further informed that on Sunday, April 2, that one compressor was shut down, and further that the other two were running at half speed, viz: 40 to 50 revolutions per minute. I was informed that at 5:00 a. m. Monday the 3d inst. that the three compressors were again running at full speed. I am informed that the fan was stopped Friday evening, March 31, and not started again until Monday, the 3d inst. at 5:30 p. m. They have a fan 6 by 18 feet, capable of delivering 75,000 cubic feet of air per minute; more than enough to ventilate this mine, if properly distributed.

Now, the facts briefly stated, as I believe, are: There were 41 kegs of powder in the powder rooms, below ground, and about 150 men on the two shifts, and it is only fair to assume that there were not less than 75 kegs of powder at the faces of the working places, that is to say, half a keg for each man. This would be 116 kegs of powder in all. Now, the fan stopped from Friday evening until the time of the explosion, so the ventilating current was also stopped, and all the air that went into the mine was sent in through the two-inch pipes to 7 dead ends, just barely sufficient to prepare an explosive mixture of the most violent nature. The mine was known to generate fire damp. This their report book shows. It also shows the mine was not examined Saturday or Monday. The result—a magazine ready for the flame to set it off. There were two separate and distinct explosions from two to three seconds apart. The first was the gas and the powder at the working faces, the second the 41 kegs in the powder room; the first explosion burst the kegs and set them off; the first explosion was the most violent; it went up the air shaft; the second went up the hoisting shaft, that being the line of least resistance. I further believe the mine manager is the man who ignited the gas, he having been found about 75 feet further in advance of the workmen. I asked the general manager why he took such desperate chances, or words to that effect. He replied, that at every step since the mine had been started, the State Inspector of Mines had been consulted and all their work had the stamp of approval of the State. I asked him if he could produce that evidence, if called upon to do so, and he replied that he could. The facts herein stated are self evident.

I enclose map of their mine, showing how they were attempting to ventilate it. I also enclose one of my maps, from which their mine was copied, all except the bottom. The ventilation was intended to be carried out as laid in my map.

Respectfully,

JOHN G. MASSIE.

The reports made by the different investigators are substantially the same. As to the cause of the explosion all agree in attributing it to gas. That the mine was being operated in violation of the plain provisions of the mining law of this State no one seriously disputes. The records kept by the company itself show that the mine generated gas, furthermore that certain daily examinations were made by employes who did not have the certificate authorizing them to perform such work, and that for several days just preceding the explosion the mine had not been examined at all. Upon the strength of this testimony the Attorney General of the State secured several indictments against the company and its agents. The verdict of the coroner's jury sought to exonerate the company by holding that the disaster was due to a powder explosion, thus indicating a criminal purpose to blow up the mine. Considering the special precautions the company had taken to protect its property, this conclusion reflected upon the integrity of the jurymen and invited the suspicion that the men conducting the inquest had been selected for the purpose of shielding the company. There was certainly no evidence to warrant such a finding. To support such a theory it would be necessary for the jury to suppose that certain men were willing, in their desire to destroy the property of the company, to sacrifice their own lives. This imposes too heavy a tax on human credulity. To fully understand this phase of the case and the occasion for such a verdict, the explanation should be made that for nine months preceding the explosion the company had been engaged in a bitter conflict with the miner's union. While the initial cause of the trouble was a disagreement over the scale rate for that mine, following a change from day work to a tonnage basis, this was later lost sight of in the apparent determination of the company to defy and defeat the union. Mr. Joseph Leiter, the owner, a man of most positive character, denied the right of the union to interfere in any way with the management of his property. Having decided upon this course and appreciating the power and influence of the miners' unions, he immediately prepared for a seige. A stockade was constructed, and men heavily guarded were stationed around the premises. On the top of the tall tower a rapid firing gun was placed, also a searchlight, by means of which objects moving in the night could be seen within a radius of several miles. The method of protection was so complete as to make it impossible for any one to approach within a reasonable distance of the property, without being subject to the closest scrutiny. If the person was properly identified and vouched for he was permitted to enter. Notwithstanding this system of espionage the company's officials are represented as contending that some time during the night preceding the explosion, some maliciously disposed people eluded the guards, scaled the stockade, descended the mine, and exploded the powder magazine. It would seem that a mere statement of the facts is sufficient to disprove such a contention without attempting any argument to further expose the patent weakness of such a defense. The fact that a jury, in the absence of any investigation, would lend the influence of its verdict

to a statement of that kind, testifies not so much to the unreliable character of such agencies, as to the strong local control exercised by the company's officials in a community of that kind.

The investigation and reports of the several experts who were detailed to examine the premises are notably clear, strong and unanimous in the opinion that the explosion was the result of gas, which, on account of the impaired condition of the ventilating apparatus, had been allowed to accumulate in excessively dangerous quantities. While the judgment of the investigators is that the powder stored in the magazine and at other places in the mine intensified the power of the explosion, the increased damage from that source must have been comparatively slight. The exploding of forty or more kegs of powder in the face of such force would have no more effect than the throwing of a splinter into a raging furnace or the pop of a firecracker in the roar of a cannon.

In the report of the Seventh district, in which the mine was then located, appears quite a full description of the equipment of the Zeigler coal plant. Everything connected with it is more than up to date, and of a model type in every respect. The company has strong financial backing, and money has not been spared in the installation of modern improvements. It is but fair to say that particular care has been taken for the comfort and welfare of the employés. The homes of the miners in point of architecture and capacity are superior to the class of dwellings usually found in an exclusively mining village. These accommodations are furnished at reasonable rentals. A commodious brick school house, one of the best in the country, was erected by the company, at considerable expense. A hospital, with many modern facilities, is maintained on the premises, a specific sum being collected each month from the employés for its support. At the mine, adjoining the engine room, there has been constructed a large cement wash house for the convenience of the employés. It is supplied with hot and cold water, including lockers for the workmen's clothes. The manager, in conversation with the writer, explained that this and other arrangements for the comfort of its employés had been made, not because the law demanded them, but that ordinary considerations for the comfort of workingmen required them.

How striking the contrast between this statement and the general protest of mine owners against the passage of a law requiring that such facilities should be supplied at all coal mines in this State! It is a subject of sincere regret that a company equipped as it is, with so many laudable achievements to its credit, should have become involved in such a conflict or have felt compelled to resort to such forms of defense. The memory of Virden is still fresh. Stockades are not popular in Illinois. Men who are worth their salt will not work under guards. Private industry can never flourish in the face of a gun, and a victory, if won by such methods, has been purchased at too great a price.

The following summary presents the specific features of this report for the year:

## COAL IN ILLINOIS.

This is the twenty-fourth annual report of the statistics of the coal mining industry in Illinois, compiled by the Bureau of Labor Statistics, and is for the fiscal year ended June 30, 1905. The report embraces, in a general way, the same facts for the year that have appeared in former reports; so that comparisons can be made with any of the topics treated in previous reports.

The groundwork of all the conclusions reached in the summaries presented, is founded on the reports made to the Bureau by the several State inspectors. The facts produced have been obtained on schedules furnished by the inspectors to the operators and is the best and only authority for the particulars concerning the production of coal in the State.

## SUMMARY FOR THE YEAR ENDED JUNE 30, 1905.

Number of counties producing coal.....	56
Number of mines and openings of all kinds.....	990
New mines or old mines reopened during the year .....	168
Mines closed or abandoned since last report .....	110
Total output of all mines, in tons of 2,000 pounds .....	37,183,374
Number of shipping or commercial mines.....	397
Total output of shipping mines, tons.....	35,956,543
Number of mines in local trade only .....	593
Output of local mines, tons.....	1,226,831
Total tons of mine-run coal.....	9,248,558
Total tons of lump coal.....	16,819,321
Total tons of egg coal.....	1,716,219
Total tons of nut coal.....	2,036,152
Total tons of pea coal.....	6,247,511
Total tons of slack coal.....	1,115,613
Total tons shipped.....	31,667,073
Tons supplied to locomotives at the mines .....	1,178,237
Tons sold to local trade .....	2,600,808
Tons consumed (or wasted) at the plant .....	1,737,256
Average days of active operation for shipping mines .....	198
Average days of active operation for all mines .....	175
Average value per ton all grades at the mines .....	\$1.041
Average value per ton of mine-run coal at the mines .....	\$1.062
Average value per ton of lump coal at the mines.....	\$1.291
Average value per ton of egg coal at the mines.....	\$1.237
Average value per ton of nut coal at the mines.....	\$0.865
Average value per ton of pea or screenings coal at the mines .....	\$0.48
Average value per ton of slack coal at the mines .....	\$0.301
Aggregate home value of total product .....	\$38,689,858
Number of mines in which mining machines are used .....	78
Number of mining machines in use .....	784
Number of tons undercut by machines.....	8,202,066
Number of tons mined by hand .....	28,981,308
Average number of miners employed during the year.....	41,202
Average number of other employes underground.....	10,694
Average number of boys employed underground.....	1,540
Average number of employes above ground .....	5,794
Total employes.....	59,230
Number of men at work underground.....	53,436
Number at work on surface .....	5,794
Average price paid per gross ton for hand mining, shipping mines.....	\$2
Average price paid per gross ton for machine mining .....	

Number of kegs of powder used for blasting coal.....	938,500
Number of kegs of powder used for other purposes .....	4,158
Number of men accidentally killed .....	199
Number killed inside of the mines .....	197
Number killed outside of the mines .....	2
Number of wives made widows .....	102
Number of children left fatherless.....	231
Number of men injured so as to lose a month or more of time .....	535
Number of gross tons mined to each life lost.....	186,851
Number of employes to each life lost .....	298
Number of deaths per 1,000 employed.....	3.4
Number of gross tons mined to each man injured.....	69,502
Number of employes to each man injured .....	111

The number of counties producing coal this year is 56, this is two more than was reported last year; the additional counties are Putnam and White.

There are 990 mines, or openings of all kinds reported, this is a gain of 58 mines over the number shown last year; of the total number 397 are shipping mines, and 593 are styled local mines, their output being used entirely to supply local trade. Of the increased number of mines 17 are of the shipping class and 41 engaged in the local trade. The total production of coal was 37,183,374 tons, being a gain over last year of 105,477 tons. The aggregate value of the total product at the mines was \$38,689,858, being \$1,041 per ton.

The shipping mines produced 35,956,543 tons, or 96.7 per cent of the total product; this had an aggregate value at the mines of \$36,711,630 or \$1.021 per ton. The total number of persons employed was 59,230, this is an increase of 4,456 or 8.14 per cent over last year.

The average number of days of active operation of the shipping mines was 198, this is 15 days less than shown for last year.

#### CLASSIFICATION OF MINES.

The presentation shown in the following table is that of the number of mines, men and tons, by districts and for the State, the same facts are also given both for the shipping and local mines:

TABLE 1—*Mines, Men and Tons, Shipping and Local Mines by Districts, 1905.*

DISTRICT.	TOTAL.			SHIPPING.			LOCAL.		
	Mines.	Men.	Tons.	Mines.	Men.	Tons.	Mines.	Men.	Tons.
First.....	89	8,157	3,396,807	39	7,716	3,252,282	50	441	144,525
Second .....	178	7,761	3,212,728	29	6,932	2,942,229	149	829	270,499
Third .....	262	5,397	3,107,379	55	4,336	2,774,498	207	1,061	332,881
Fourth .....	101	7,441	4,477,632	45	7,050	4,303,295	56	391	174,337
Fifth .....	112	10,175	7,435,952	56	9,869	7,329,825	56	306	106,127
Sixth.....	127	10,636	8,506,929	92	10,401	8,392,443	35	235	114,485
Seventh .....	121	9,663	7,045,947	81	9,439	6,961,971	40	224	83,976
The State.	990	59,230	37,183,374	397	55,743	35,956,543	593	3,487	1,226,831

The percentages of mines, men and tons, for the State and for the shipping and local mines, are shown in the table following by districts:

TABLE 2—*Percentages of Mines, Men and Tons, all Mines, and of Shipping and Local Mines, 1905.*

DISTRICT.	PERCENTAGES.								
	ALL MINES.			SHIPPING.			LOCAL.		
	Mines.	Men.	Tons.	Mines.	Men.	Tons.	Mines.	Men.	Tons.
First.....	8.99	13.77	9.13	43.82	94.59	95.75	56.18	5.41	4.25
Second .....	17.98	13.10	8.64	16.29	89.32	91.58	83.71	10.68	8.42
Third. ....	26.47	9.11	8.36	20.99	80.34	89.29	79.01	19.66	10.71
Fourth .....	10.20	12.56	12.04	44.55	94.75	96.11	55.45	5.25	3.89
Fifth .....	11.31	17.18	20.00	50.00	96.99	98.57	50.00	3.01	1.43
Sixth.....	12.83	17.96	22.88	72.44	97.99	98.65	27.56	2.21	1.35
Seventh .....	12.22	16.32	18.95	66.94	97.68	98.81	33.06	2.32	1.19
The State.....	100.00	100.00	100.00	40.10	94.11	96.70	59.90	5.89	3.30

The shipping and local mines each have about the same proportion to the total number of mines as was shown for last year. The number of shipping mines has increased 17 or 4.47 per cent; this increase is shown in the second, fifth, sixth and seventh districts, while there has been a slight decrease in the first and fourth districts, the third district has the same number as last year. As to mines, men and tons, it will be seen that the shipping class represents only 40 per cent of the mines, while they employed 94 per cent of the men and produced 97 per cent of the product.

The increase or decrease in the number of mines, men and tons, is shown in a comparative table for the year 1904 and 1905 as follows:

TABLE 3—*Mines, Men and Tons for the Years 1904 and 1905, with the Increase or Decrease by Districts.*

DISTRICTS.	TOTALS—1904.			TOTALS—1905.			INCREASE ( + ) OR DECREASE ( - ) FOR YR. 1905.		
	Mines.	Men.	Tons.	Mines.	Men.	Tons.	Mines.	Men.	Tons.
First .....	88	8,038	3,450,315	89	8,157	3,396,807	+ 1	+119	— 53,508
Second .....	171	7,362	3,322,490	178	7,761	3,212,728	+ 7	+399	—109,762
Third .....	238	4,808	3,058,414	262	5,397	3,107,379	+24	+589	+ 48,965
Fourth .....	96	7,293	5,142,786	101	7,441	4,477,632	+ 3	+148	—665,154
Fifth .....	102	9,541	7,280,287	112	10,175	7,435,952	+10	+636	+155,665
Sixth.....	117	9,665	8,634,726	127	10,636	8,506,929	+10	+971	—127,797
Seventh .....	120	8,067	6,188,879	121	9,663	7,045,947	+ 1	+1,596	+857,068
The State....	932	54,774	37,077,897	990	59,230	37,183,374	+56	+4,458	+105,477

All of the districts show an increase in the number of mines and men, while only the third, fifth and seventh districts show an increase in the output, all of the other districts showing a decrease, the largest being in the fourth district.

Much the largest increase in the tonnage is shown in the seventh district.

### SHIPPING AND LOCAL MINES.

The totals, mines, men and tons, are given for 13 years in the table following:

TABLE 4—*Mines, Men and Tons, Shipping and Local Mines, for Thirteen Years.*

YEAR.	TOTAL.			SHIPPING.			LOCAL.		
	Mines.	Men.	Tons.	Mines.	Men.	Tons.	Mines.	Men.	Tons.
1893.....	788	35,390	19,949,564	310	28,737	19,257,682	478	6,653	691,882
1894.....	836	38,477	17,113,576	319	31,243	16,106,613	517	7,234	1,006,963
1895.....	874	38,630	17,735,864	319	31,174	16,578,890	555	7,456	1,156,974
1896.....	901	37,032	19,786,626	330	28,185	18,263,056	571	8,847	1,523,570
1897.....	853	33,788	20,072,758	310	31,322	19,386,573	543	2,466	686,185
1898.....	881	35,026	18,599,299	329	32,297	17,655,561	552	2,729	943,738
1899.....	889	36,991	23,434,445	323	34,307	22,531,356	566	2,684	903,089
1900.....	920	39,384	25,153,929	323	36,298	24,056,996	597	3,086	1,096,933
1901.....	915	44,143	26,635,319	331	40,926	25,526,816	584	3,217	1,108,503
1902.....	915	46,005	30,021,300	332	42,807	28,824,750	583	3,198	1,196,550

\*Decrease.

Referring to the first three columns it will be seen that, for the past seven years, there has been a gradual increase in the number of men employed and the number of tons of coal produced; while the number of mines has varied slightly from year to year, this year shows the largest number ever reported.

During these seven years the increase in the number of men and the number of tons produced has been very nearly parallel; the number of men has increased 60.12 per cent and the number of tons 58.67 per cent.

Observing the columns of the same table under the heading of shipping mines, it will be found that, for the past seven years, the number of this class of mines has increased 22.91 per cent; the number of men 62.48 per cent, and the tonnage 59.58 per cent. During the same years the mines in the local trade have increased 5.11 per cent, the number of men 29.92 per cent, and the tonnage 35.85 per cent. Attention is directed to the two bottom lines of the table; here is shown for the 13 years the increase in the number of mines, men and tons, with percentages in the different classifications; the only decrease shown is in the number of men employed at the local mines. Regarding the operations of the two classes of mines, which are observed in all these exhibits, the following table presents the mines, men and tons by percentages for 13 years:

TABLE 5—*Mines, Men and Tons, With Percentages of Shipping and Local Mines for Thirteen Years.*

YEARS.	TOTALS—ALL MINES.			PERCENTAGES.					
				SHIPPING.			LOCAL.		
	Mines.	Men.	Tons.	Mines.	Men.	Tons.	Mines.	Men.	Tons.

1904.....	932	54,774	37,077,897	40.77	93.81	96.50	59.23	6.19	3.50
1905.....	990	59,230	37,183,374	40.10	94.11	96.70	59.90	5.89	3.30

The mines of the shipping class show a gradual increase in number for the past five years; this year, compared with the whole number of mines in the State, the number of shipping mines is about two-thirds of one per cent less than last year. However, for this year, the showing is that the shipping mines are only 40 per cent of all the mines, but employed 94 per cent of all the men and produced

97 per cent of the tonnage. The record of the output of the shipping mines for the 13 years is set forth in the following table by districts:

TABLE 6—*Percentage of the Tonnage of Shipping Mines of Each District, and of the State, for Thirteen Years.*

YEAR.	First.	Second.	Third.	Fourth.	Fifth.	Sixth.	Seventh.	The State.
1893 .....	97.2	88.8	93.1	98.9	98.6	.....	.....	96.53
1894 .....	93.8	83.0	91.7	98.8	93.7	.....	.....	94.10
1895 .....	93.7	86.8	90.6	99.0	91.3	.....	.....	93.48
1896 .....	96.2	92.6	76.9	95.1	99.2	98.7	96.6	96.26
1897 .....	97.29	92.99	78.91	95.20	99.32	98.55	97.82	96.53
1898 .....	91.35	88.61	78.59	93.69	99.12	98.48	98.11	94.93
1899 .....	94.73	92.53	79.93	95.43	98.81	98.57	98.52	96.15
1900 .....	95.81	89.14	87.18	95.47	98.39	98.84	93.47	95.64
1901 .....	96.68	89.38	85.98	94.65	98.65	98.64	97.63	95.84
1902 .....	94.93	91.89	85.54	95.36	98.82	98.73	98.37	96.01
1903 .....	94.78	92.16	85.65	95.83	98.86	98.98	95.96	96.34
1904 .....	96.20	91.38	88.51	95.31	98.58	98.79	98.65	96.50
1905 .....	95.75	91.58	89.29	96.11	98.57	98.65	98.81	96.70

But little variation will be seen in the output of the shipping mines from year to year in the several districts; compared with last year the gain or loss does not reach one per cent in any of the districts.

GROUPING OF MINES.

The grouping of the mines of the State are shown in the following table:

TABLE 7—*Grouping of Mines by Tonnage and Districts—1905.*

DISTRICT.	TONNAGE AND MINES PRODUCING—											
	Under 1,000.		1,000 and under 10,000.		10,000 and under 50,000.		50,000 and under 100,000.		100,000 and under 200,000.		200,000 and over.	
	○ Z	Tons.	○ Z	Tons.	○ Z	Tons.	○ Z	Tons.	○ Z	Tons.	○ Z	Tons.
First .....	20	8,089	33	112,615	11	226,010	10	761,508	14	2,066,715	1	221,870
Second .....	78	32,189	77	238,595	8	151,361	4	268,974	3	419,573	8	2,102,037
Third .....	138	53,705	74	265,687	29	730,142	14	981,685	5	626,089	2	450,071
Fourth .....	18	9,482	41	134,430	18	393,470	4	281,466	11	1,361,938	9	2,296,846
Fifth .....	35	13,384	22	62,907	10	276,758	11	810,058	22	3,108,159	12	3,164,686
Sixth .....	11	4,775	27	94,233	40	1,099,215	19	1,291,121	18	2,501,847	12	3,515,738
Seventh .....	21	7,806	25	84,928	31	975,609	21	1,473,221	15	2,073,769	8	2,430,544
The State.	321	129,430	299	993,394	147	3,852,565	83	5,868,103	88	12,158,090	52	14,181,792

Here are six classes of the mines, by districts, grouped according to tonnage. These may be subdivided into two classes; those that produce less than 50,000 tons, and those having an output of 50,000 tons and over. The mines whose output was less than 50,000 tons each, number 767 or 77.47 per cent of all the mines, and produced 4,975,389 tons or 13.38 per cent of the total tonnage. This leaves 223 or 22.53 per cent of all the mines, but yielding 32,207,985 tons, or 86.62 per cent of all the coal produced.

The further comparison of the two classes of mines and their output is presented, by districts in the following table:

TABLE 8—Percentages of Mines and Tons in Two Specified Classes, by Districts.

DISTRICT.	MINES PRODUCING—			
	LESS THAN 50,000 TONS.		OVER 50,000 TONS.	
	Mines.	Tons.	Mines.	Tons.
First .....	71.91	10.21	28.09	89.79
Second .....	91.57	13.14	8.43	86.86
Third .....	91.98	33.78	8.02	66.22
Fourth .....	76.24	12.00	23.76	88.00
Fifth....	59.82	4.75	40.18	95.25
Sixth .....	61.42	14.09	38.58	85.91
Seventh .....	63.64	15.16	36.36	84.84
The State.....	77.47	13.38	22.53	86.62

The largest percentages of mines producing less than 50,000 tons are shown in the second and third districts, while much the largest percentage of tons produced is to be seen in the third district.

Referring to the class of mines producing over 50,000 tons, both the second and third districts are much below any of the other districts. All of the mines, of this class, in each district, however, produce much the largest percentage of the output.

The table following presents the final showing of this classification:

TABLE 9—Classification of Mines as to Tonnage, with Percentages of Mines and Tons— 1905.

MINES PRODUCING—	Number of mines.	TONNAGE.	PERCENTAGE OF	
			Mines.	Tons.
Less than 1,000 tons .....	321	129,430	32.43	.35
One thousand and less than 10,000 tons .....	299	993,394	30.20	2.67
Ten thousand and less than 50,000 tons.....	147	3,852,565	14.85	10.36
Fifty thousand and less than 100,000 tons .....	83	5,868,103	8.38	15.78
One hundred thousand and less than 200,000 tons....	88	12,158,090	8.89	32.70
Two hundred thousand tons and over .....	52	14,181,792	5.25	38.14

By dividing this grouping of mines, and noting the number producing less than 10,000 tons each, it is found that these mines represent 62.63 per cent of all the mines, but yield only 3.02 per cent of the output, thus leaving 37.37 per cent of the mines that furnish 96.98 per cent of all the coal output.

The different classes of mines as indicated in previous tables are shown in the following table for 23 years.

TABLE 10—*Number of Mines in Specified Groups of Tonnage for a Series of Twenty-three Years.*

YEAR.	NUMBER OF MINES PRODUCING.						Total mines.
	Under 1,000 tons.	1,000 and under 10,000 tons.	10,000 and under 50,000 tons.	50,000 and under 100,000 tons.	100,000 and under 200,000 tons.	200,000 tons and over.

1905.....	321	299	147	83	88	52	990
Increase in 23 years..	112	66	14	44	78	37	351

The increase in the number of mines producing less than 50,000 tons, for the 23 years, has been 192 or 33.39 per cent, while the increase in the number of mines producing 50,000 tons and over has been 159 or 248.44 per cent.

The percentages of the six classes of mines for the 23 years are shown in the following table:

TABLE 11—*Percentages of Mines in Specified Grouping of Tonnage for a Series of Twenty-three Years.*

YEAR.	Total Mines.	PERCENTAGES OF MINES PRODUCING.					
		Under 1,000 tons.	1,000 and under 10,000 tons.	10,000 and under 50,000 tons.	50,000 and under 100,000 tons.	100,000 and under 200,000 tons.	200,000 tons and over.

Percentages of increase 23 yrs. ....		53.59	28.32	10.53	112.92	780.00	246.67

The final line in this table gives the percentage of increase in each of the six classes of mines for the 23 years. Notably is the large increase in each of the three classes whose annual output is 50,000 tons and over.

The total output in tons, of the six classes of mines shown, for 14 years will be found in the following table:

TABLE 12—*Grouping of Mines by Tonnage for a Series of Fourteen Years.*

YEAR.	TONNAGE OF MINES PRODUCING—					
	Under 1,000 tons.	1,000 and under 10,000.	10,000 and under 50,000.	50,000 and under 100,000.	100,000 and under 200,000.	200,000 and over.

1905.....	129,403	993,394	3,852,565	5,868,103	12,158,090	14,181,792
Increase (+) or decrease (—) in 14 years...	—18,374	—64,684	—281,694	+1,574,631	+6,302,999	+11,808,193

The last line in this table gives the increase or decrease in each of the six classes for 14 years, or the difference in the tonnage of each class as shown for the year 1892, and that for 1905.

It is here shown that the tonnage of each of the three classes of mines producing less than 50,000 tons has decreased, while a very noted increase is shown in the increased tonnage of the mines, where the annual output has been 50,000 tons and over. The last line in the table presents the increase and decrease in tons of each class for the past 14 years.

The foregoing is amplified by the percentages to be found in the following table:

TABLE 13—*Percentages of Tons Produced by Specified Grouping of Tonnage for Fourteen Years.*

YEARS.	Total tons.	PERCENTAGE OF TONS PRODUCED BY MINES PRODUCING—					
		Under 1,000 tons.	1,000 and under 10,000 tons.	10,000 and under 50,000 tons.	50,000 and under 100,000 tons.	100,000 and under 200,000 tons.	200,000 tons and over.

Percentage of increase (+) or decrease (—) in 14 years.....	+51.96	—12.43	—6.11	—6.81	+36.68	+107.65	+497.48

Observing the last line in this table it will be seen that the total tonnage of coal produced has increased 52 per cent this year, over that of 1892, while in the classification it is noticable that the mines whose output is less than 50,000 have all decreased; the class of less than 1,000 tons shows the largest decrease. Combining the three classes showing a production of less than 50,000 tons the decrease for the 14 years has been 93.17 per cent. The two classes producing 100,000 tons and 200,000 tons and over, show much the largest increase, the latter reaching nearly 500 per cent.

## COLLIERIES OF LARGEST OUTPUT.

The coal mines of the State, which have each produced 100,000 tons and over and those producing 200,000 and over during the year are shown in the two tables following:

TABLE 14—*Mines from which more than 100,000 Tons and less than 200,000 Tons of Coal have been delivered during the Year 1905.*

	Total tons .....	.....	12,158,090

This table gives the operators and locations of the mines producing 100,000 tons and less than 200,000, during the year. The number in this class of mines is 10 less than last year, the output being 1,595,885 tons less. The total number in this class for the year is 88 with an output of 12,158,090 tons. The next table also gives the names of the operators and locations of mines, and, in addition, the number of days that each mine was in operation, the depth of the coal below the surface, the thickness of the seam and the manner of working, by hand or machine, or by both.

52	Big Muddy Coal & Iron Co.....	Murphysboro...	221	150	6.3	H-M.	200, 406
	Total tons.....	.....	.....	.....	.....	.....	14, 181, 792

The number of this class of mines for the year is 52, which is six more than last year, with a total output of 14,181,972 tons, which is 721,520 tons more than the 46 mines of the same class last year. Combining the two classes of these large producing mines, we have 140 mines with an output of 26,339,882 tons. These represent 35.26 per cent of the shipping mines, and 73.23 per cent of the tonnage of the same mines.

The following table shows these mines with their tonnage for 10 years:

TABLE 16—*Mines Producing 100,000 Tons and Less than 200,000 Tons, Also Mines Producing 200,000 Tons for 10 Years.*

YEAR.	MINES PRODUCING 100,000 TONS AND LESS THAN 200,000 TONS.		MINES PRODUCING MORE THAN 200,000 TONS.	
	Num- ber of mines.	Tons.	Num- ber of mines.	Tons.
1896.....	45	6,557,545	16	3,962,435
1897.....	41	5,778,374	17	4,514,507
1898.....	42	5,893,596	7	1,709,457
1899.....	56	7,443,023	25	6,556,651
1900.....	65	8,995,963	27	6,769,328
1901.....	58	8,008,897	33	8,370,234
1902.....	72	9,923,538	38	10,101,867
1903.....	87	12,387,437	45	12,728,405
1904.....	98	13,753,973	46	13,460,272
1905.....	88	12,158,090	52	14,181,792

It is here shown that the mines of the minor class have increased during the 10 years from 45 to 88, or 95.56 per cent, while the output has increased 5,600,545 tons or 85.51 per cent. During the same period the mines shown in the greater class have increased from 16 in 1896 to 52 for the present year, or 225 per cent. The increase in the product of these mines, for the same period has been 10,219,357 tons or 257.91 per cent.

NUMBER OF MINES.

The gain or loss in the number of mines for the year is shown in the following table:

TABLE 17—*Gain and Loss in Number of Mines 1904-1905, by Districts.*

	Total number of mines 1904.	Number new mines opened 1905.	Total.	Number of mines aban- doned 1905.	Total number of mines 1905.	YEAR 1905.	
						Gain.	Loss.
First.....	88	17	105	16	89	1	.....
Second.....	171	43	214	36	178	7	.....
Third.....	238	35	273	11	262	24	.....
Fourth.....	96	26	122	21	101	5	.....
Fifth.....	102	16	118	6	112	10	.....

Gain.....	1	.....	28	5	6	20	32	75	63	
Loss.....	.....	17	.....	.....	.....	.....	.....			20

All the districts show a gain in the number of this class of mines, excepting the second, during the ten years. The second district shows a loss of 17 mines; the largest gains are shown in the seventh, third and sixth districts; the total gain for the State is 75 for this class of mines, mainly for the years 1898, 1903 and 1904 and the present year. The gain was 22 in the number of local mines during the same period.

A list of the shipping mines, their location and activity as producers and distributors of the coal output of the State, has been published each year for several years. The number of this class of mines in the year 1905 is 397, their combined output being 35,556,043 tons or 14.5 per cent of the total output of the State; while the number of these mines in 1904 was 353, their output being 30,000,000 tons or 14.1 per cent of the total number. The Consolidated Illinois Coal Company is the largest with 18 mines, and an output of 1,600,000 tons. The Kewanee Coal Company had first place with 15 mines, and an output of 1,400,000 tons. Five of these companies show an output of over 1,000,000 tons each. The following table shows the output of the several companies in the several years, and the total output of the State for each year.

The number of coal mines opened and closed, with the gain and loss each year for the past 16 years is presented in the following table:

TABLE 18—*Total Number of Mines, the Number Opened and Closed, also the Gain and Loss for Sixteen Years.*

YEAR.	NUMBER OF MINES.					
	At beginning of year.	Opened.	Closed.	Gain.	Loss.	At close of year.

Totals.....	.....	1,911	1,775	338	202	.....

The number of new mines opened during the year was 168; this is the largest number opened in any one year since 1890; the number closed during the year was 110, the same as shown for last year.

#### SHIPPING MINES.

This class of mines has, for several years, produced a very large proportion of the coal output of the State, and, as a consequence, has been the large employer of the labor in bringing the coal to the surface, and loading it on to the cars for shipment to the various markets.

The number of these mines, located in the different districts, and the total number in the State, also the gain and loss from year to year for 10 years is shown in the following table:

TABLE 19—*Number of Shipping Mines, by Districts, with Gain and Loss, for Ten Years.*

YEAR.	DISTRICTS.							Total.	Gain.	Loss.
	First.	Second.	Third.	Fourth.	Fifth.	Sixth.	Seventh.

1905.....	39	29	55	45	56	92	81	397	17	.....
Gain .....	1	.....	28	5	6	20	32	75	95	.....
Loss.....	.....	17	.....	.....	.....	.....	.....	.....	.....	20

All the districts show a gain in the number of this class of mines, excepting the second, during the ten years. The second district shows a loss of 17 mines; the largest gains are shown in the seventh, third and sixth districts; the total gain for the State is 75 for this class of mines, mainly for the years 1898, 1903 and 1904 and the present year. The gain was 22 in the number of local mines during the same period.

A list of the shipping mines, their location and activity as producers and distributors of the coal output of the State, has been published each year for several years. The number of this class of mines for this year is 397, their combined output being 35,956,543 tons or 97 per cent of the total output of the State; while the number of these mines represent 40 per cent of the total number. The Consolidated Coal Company heads the list with 18 mines, and an output of 1,688,560 tons; last year the Kellyville Coal Company had first place with nearly 2,000,000 tons. Five of these companies show an output of over 1,000,000 tons, last year seven companies had a like output. These mines are operated at 173 different localities, in the several districts of the State, with a total output, as before noted, of 35,956,543 tons; the total product of all the mines of the State for the year being 37,183,374 tons.

Notwithstanding the reports which have recently been quite generally and repeatedly published, concerning the consolidations of the coal mining companies of Illinois, and the making over of coal mine properties and lands during the past year, the list that follows reveals that, compared with last year, there has been an increase both in the number of shipping mines operated and the number of operators. This is shown in the following statement:

OPERATORS.

Year.	Number of mines operated.	Corporations.	Firms.	Individuals.	Totals.
1905	397	242	21	17	280
1904	380	228	20	25	273

Here it is shown that the coal corporations of the State have increased from 228 in 1904 to 242 for this year. The firms or partnerships operating mines have only increased by one, while the individual operators have diminished from 25 to 17; however, showing a net increase of seven in the number of operators. The increase has been 17, in the number of these large mines.

The list of mines follows:

TABLE 20—Shipping or Commercial Collieries—Distribution of Output—1905.

GRADED OUTPUT FOR THE YEAR.

The production of the coal mines of the State, by districts, which is subdivided into different grades of coal, known to the trade, is shown in the following table:

TABLE 22—Output of the Shipping and Local Mines of the State with Tons of the Different Grades of Coal by Districts—1905.

DISTRICTS.	Total output tons.	TONS OF THE DIFFERENT GRADES OF COAL.					
		Mine run	Lump.	Egg.	Nut.	Pea or scre'n'gs	Slack or waste.
First.....	3,252,282	304,356	1,821,149	339,780	66,349	631,586	89,062
Second.....	2,942,229	262,953	2,038,825	25,660	14,390	524,313	76,088
Third.....	2,774,498	580,447	1,289,164	228,639	150,467	376,569	149,212
Fourth.....	4,303,295	2,639,164	978,614	51,471	193,142	314,155	126,749
Fifth.....	7,329,825	1,650,109	3,540,991	182,132	271,313	1,550,711	134,569
Sixth.....	8,392,443	1,503,788	4,494,302	268,567	399,094	1,421,287	305,405
Seventh.....	6,961,971	1,843,385	1,934,729	619,862	933,591	1,401,135	229,269
Shipping mines.....	35,956,543	8,784,202	16,097,774	1,716,111	2,028,346	6,219,756	1,110,354
Local mines.....	1,226,831	464,356	721,547	108	7,806	27,755	5,259
Totals.....	37,183,374	9,248,558	16,819,321	1,716,219	2,036,152	6,247,511	1,115,613

The tonnage of the shipping mines has an increase of 177,026 tons over last year, while the output of the local mines shows a decrease of 71,549 tons.

The percentages of the different grades of coal is presented by districts in the table following:

TABLE 23—Percentages of the Total Output of the Different Grades of Coal, Shipping and Local Mines, by Districts.

DISTRICT.	Percent of total output.	PERCENTAGES OF THE DIFFERENT GRADES OF COAL.					
		Mine run	Lump.	Egg.	Nut.	Pea or scre'n'gs.	Slack or waste.
First.....	9.04	9.36	56.00	10.42	2.04	19.43	2.75
Second.....	8.18	8.94	69.30	.87	.49	17.82	2.58
Third.....	7.72	20.92	46.46	8.24	5.43	13.57	5.38
Fourth.....	11.97	61.33	22.74	1.20	4.49	7.30	2.94
Fifth.....	20.39	22.51	48.31	2.48	3.70	21.16	1.84
Sixth.....	23.34	17.92	53.55	3.20	4.76	16.94	3.63
Seventh.....	19.36	26.48	27.79	8.90	13.41	20.13	3.29
Shipping mines.....	100.00	24.43	44.77	4.77	5.64	17.30	3.09
Local mines.....	100.00	37.85	58.80	.01	.64	2.26	.44

The grades of mine-run and lump coal show a decrease in tonnage from last year; all of the other grades, excepting slack, show an increase. The graded tonnage of all the mines in the State is shown in the following table, for six years, with the percentages of each grade for the same period:

TABLE 24—Total Output of the Different Grades of Coal, All Mines, for Six Years, with Percentages.

YEAR.	Total output—tons.	TONS OF THE DIFFERENT GRADES OF COAL.					
		Mine run.	Lump.	Egg.	Nut.	Pea or screenings	Slack or waste.
1900.....	25,153,929	5,554,627	13,927,899	495,637	1,323,582	2,811,520	1,040,874
1901.....	26,635,319	6,882,740	13,321,124	486,596	1,217,127	3,667,591	1,060,141
1902.....	30,021,300	6,986,204	15,041,673	680,985	1,586,456	4,604,232	1,121,750
1903.....	34,955,400	10,373,098	15,874,509	995,163	1,775,704	4,540,431	1,416,495
1904.....	37,077,897	10,627,904	16,888,010	1,014,700	1,602,283	5,751,570	1,193,330
1905.....	37,183,374	9,248,558	16,819,321	1,716,219	2,036,152	6,247,511	1,115,613
Percentages.							
1900.....		22.08	55.37	1.97	5.26	11.18	4.14
1901.....		25.84	50.01	1.83	4.57	13.77	3.98
1902.....		23.27	50.10	2.27	5.28	15.34	3.74
1903.....		29.70	45.41	2.84	5.02	12.98	4.05
1904.....		28.66	45.55	2.74	4.32	15.51	3.23
1905.....		24.87	45.23	4.62	5.48	16.80	3.00

The grade of mine-run coal shows a decrease this year of about 4 per cent; lump coal is nearly the same as last year; egg, nut and pea grades show an increase, and the largest percentage of any of the six years; slack and waste coal show an even 3 per cent of the entire output.

The total tonnage of all the mines of the State is shown in the next table for three years by districts, with the tons of gain or loss, also the percentages of gain or loss for the same years:

**TABLE 25—Output for the Years 1903, 1904 and 1905, Compared by Districts.**

DISTRICT.	TOTAL OUTPUT—TONS.			GAIN (+) OR LOSS (—).		PERCENTAGES OF GAIN(+) OR LOSS(—)	
	1903.	1904.	1905.	1904 over 1903.	1905 over 1904.	1904 over 1903.	1905 over 1904.
First.....	3,748,651	3,450,315	3,396,807	— 298,336	— 53,508	— 7.93	— 1.55
Second.....	3,245,781	3,322,490	3,212,728	+ 76,709	— 109,762	+ 2.36	— 3.30
Third.....	2,708,350	3,058,414	3,107,379	+ 350,064	+ 48,965	+ 12.92	+ 1.60
Fourth.....	4,772,284	5,142,786	4,477,632	+ 370,502	— 665,154	+ 7.76	— 12.93
Fifth.....	7,070,903	7,280,287	7,435,952	+ 209,384	+ 155,665	+ 2.96	+ 2.14
Sixth.....	7,734,831	8,634,726	8,506,929	+ 899,895	— 127,797	+ 11.63	— 1.48
Seventh.....	5,674,600	6,188,879	7,045,947	+ 514,279	+ 857,068	+ 9.06	+ 13.85
The State..	34,955,400	37,077,897	37,183,374	+ 2,122,497	+ 105,477	+ 6.07	+ .28

It will be noticed that the increase in tonnage, this year over last, is very small, being only a little over one quarter of 1 per cent; by districts, the third, fifth and seventh show an increase, the seventh being much the largest; the other districts all show a decrease, the largest being in the fourth district.

### MINES, MEN AND TONS.

The following table presents the number of counties, mines, men and tons, for 24 years: also the percentages of lump, and other grades of coal.

TABLE 26—*Output of the State for 24 Years and the Mines and Men Producing the Same.*

YEAR.	NUMBER OF—				TONS OF—		PERCENTAGE OF—

Here is shown the leading information of the coal industry of the State for a series of 24 years. The percentages of lump, and other grades of coal are shown for all the years since 1889, a period of 16 years. Beginning with the year 1900, the several different grades of coal produced, and put on the market, have been shown separately, which accounts for the decreased percentages of lump coal for the past six years. The percentages of each of the different grades of coal produced is shown in table 22 for the six years.

The gain or loss of men employed and tons produced, is shown by percentages in the following table for a series of 24 years:

TABLE 27—*Total Number of Men and Total Tons Produced with Percentages of Gain or Loss for Twenty-four Years.*

YEAR.	Men.	Total output, tons.	PERCENTAGE OF MEN.		PERCENTAGE OF TONS.	
			Gain.	Loss.	Gain.	Loss.

A gain is shown in the number of men employed from year to year for the past eight years, and a gain in the tonnage for the past seven years. For the 24 years, only four years show a decrease in the number of men employed, and for five years a decrease in tonnage.

The proportion of the total tons of coal produced in each district, during the past 15 years, is shown by percentages in the following table:

TABLE 28—*Percentages of the Tonnage of Total Output of the State, Produced by Each District, for a Series of Fifteen years.*

YEAR.	DISTRICTS.						
	First.	Second.	Third.	Fourth.	Fifth.	Sixth.	Seventh.
1891.....	19.69	9.20	17.84	28.27	25.00	.....	.....

1899.....	15.08	14.19	3.11	14.33	20.53	18.28	14.48
1900.. ..	14.72	9.75	7.94	14.05	19.15	20.81	13.58
1901.....	13.40	10.40	7.45	12.22	20.33	21.76	14.44
1902.....	12.42	10.34	8.04	13.12	20.70	20.79	14.59
1903.....	10.73	9.29	7.75	13.65	20.22	22.13	16.23
1904.....	9.31	8.96	8.25	13.87	19.63	23.29	16.69
1905.....	9.14	8.64	8.36	12.04	20.00	22.87	18.95

Relatively there is a very slight variation to be observed in the tonnage contributed by each district from year to year. However, it will be seen that the fifth, sixth and seventh districts have furnished 62 per cent of the total product for this year.

#### OUTPUT BY SIX MONTHS PERIODS.

The schedule for this year, filled by the operators, of shipping mines, included an inquiry as to the tonnage or output of each mine for the six months ended December 31, 1904, and June 30, 1905. The returns resulting from this inquiry come from 377 of the 397 shipping mines, and accounting for 34,953,789 tons or 97.21 per cent of the total output of these mines, and 94.54 per cent of the total output of the State.

The presentation follows:

**TABLE 29—Output of Shipping Mines by Six-month Periods, ending Dec. 31, 1904, and June 30, 1905.**

NOTE.—Nine mines with an output of 667,526 tons not reported.

The table accounts for the total output of each mine for the fiscal year, by districts, divided into the two periods, with the percentages of the total tons accredited to each. The object sought in collecting and presenting these statistics as shown, has been to determine, if possible, the relative business activity of the large coal mining plants of the State, as a continuous or uninterrupted industry, regardless of any particular season or demand of the markets. The results of the inquiry also reveal the continuity of employment afforded to miners and other workmen in and about these mines, for the year round. It will be found in some instances, in the different districts, that the total output of a mine is given entirely to one of the periods, which doubtless means a new mine or the suspension of work at that particular mine.

The foregoing table is recapitulated by districts:

TABLE 30—*Recapitulation of Table 29.*

DISTRICT.	TOTAL NUMBER OF MINES AND OUT- PUT REPORTED.		PERCENTAGE OF TOTAL OUTPUT PRODUCED DURING THE SIX MONTHS ENDED—			
			DECEMBER 31, 1904.		JUNE 30, 1905.	
	Mines.	Tons.	Mines.	Percentage.	Mines.	Percentage.
First .....	39	3,252,282	35	50.42	38	49.58
Second .....	28	2,940,705	28	54.86	28	45.14
Third .....	50	2,467,876	50	51.92	49	48.08
Fourth .....	41	4,294,698	40	50.37	41	49.63
Fifth .....	56	7,329,825	55	48.00	56	52.00
Sixth .....	91	8,373,958	83	53.69	89	46.31
Seventh .....	72	6,294,445	66	48.81	72	51.19
The State .....	377	34,953,789	357	50.88	373	49.12

Here is presented a better view of the mining industry of the State for the two periods. For the six months ended December 31, 1904, 357 mines of the total number reporting produced 50.88 per cent of the total output, while for the other six months ended June 30, 1905, 373 mines furnished 49.12 per cent of the product; referring to the districts it will be seen that the fifth and seventh districts reverse this order. A similar report to the present exhibit was given in the coal report of the Bureau for the year 1897; however, that presentation was by counties, and for each month of the fiscal year. The results there found were that 51.44 per cent of the output was produced for the six months ending December 31, 1896, and 49.12 per cent for the six months ending June 30, 1897. By months the lowest per cent, 5.65, was shown for May, and the highest, 10.36, for October.

## HAULAGE IN THE MINES.

The record for the haulage of coal, in the shipping mines of the State for the year is shown in the following table, by districts, also the record for the past five years.

TABLE 31—*Haulage of Coal in the Shipping Mines of the State, by Districts, 1905.*

\* Cable, electric and mule.

† Dogs.

‡ Compressed air.

§ 677,495 tons hauled by electricity.

The number of mines using electrical power only for hauling coal to the bottom of the mines, has increased over last year; there are 19 of these mines reported this year, located in the third, fifth and seventh districts, the total tons hauled being 3,602,777 or 10 per cent of the output of the shipping mines. Electrical haulage is also employed in the other districts, but in combination with other appliances. The haulage by mule or horse power continues as the leading method, being used in 80 per cent of all these mines and pulling 68 per cent of all the coal.

The table following gives the percentages of the mines and tons hauled by the several systems:

TABLE 32—Percentages of the Shipping Mines and Tons, Showing Haulage for the years 1902, 1903, 1904 and 1905.

The last line of the table shows the increase or decrease in mines and tons as compared with last year.

OUTPUT BY COUNTIES.

The production of coal in the State, by counties, has been shown in these reports for the past several years. The following table gives a list of the counties furnishing over 500,000 tons for this year and the previous four years:

TABLE 33—Relative Rank of the Counties of the State Producing 500,000 Tons of Coal or over for a Series of Five Years.

COUNTY.	Rank.	Tonnage 1905.	Rank.	Tonnage 1904.	Rank.	Tonnage 1903.	Rank.	Tonnage 1902.	Rank.	Tonnage 1901.

The number of counties this year is nineteen, the same as last year; however, one county, Marshall, has been added while Menard county has failed to maintain its place in the list. Sangamon county holds first place in the list this year, where it has been for six years; St. Clair county has surrendered second rank to Williamson, which was fourth in rank last year.

A list of the fifty-six counties producing the coal of the State is shown as follows:

This table shows the mines, men and tons, for all mines and for shipping and local mines. The relative significance of these counties is here shown in operating and maintaining the coal mines of the State, the employing of the men and in the production of coal. Sangamon county gave employment to 5,885 men; Bureau, Williamson, Vermillion and St. Clair, to over 4,000 each as named; Madison, LaSalle, Macoupin and Grundy each accounted for over 3,000 men, while Fulton and Perry each gave employment to over 2,000 men. The eleven counties named furnished employment during the year to 41,694 men or 70 per cent of all employes at the mines in the State.

## DISPOSITION OF THE OUTPUT.

The output for the year and its distribution, are shown, by districts, in the table following:

TABLE 35—Disposition of the Output of Shipping Mines by Districts. Also Local Mines.

DISTRICTS.	Total output all grades— Tons.	Tons shipped from mines.	Tons sup- plied to lo- comotives at mines.	Tons sold to local trade.	Tons used and wasted at mines.
First .....	3,252,282	2,711,329	122,903	166,148	251,902
Second .....	2,942,229	2,665,629	57,804	89,641	129,155
Third .....	2,774,498	2,547,468	50,848	98,894	77,288
Fourth .....	4,303,295	3,517,943	196,029	391,159	198,164
Fifth .....	7,329,825	6,527,037	186,755	315,997	300,036
Sixth .....	8,392,443	7,505,551	291,423	219,696	375,773
Seventh .....	6,931,971	6,192,116	266,415	114,513	388,927
Shipping mines.....	35,956,543	31,667,073	1,172,177	1,396,048	1,721,245
Local mines.....	1,226,831	.....	6,060	1,204,760	16,011
The State .....	37,183,374	31,667,073	1,178,237	2,600,808	1,737,256

The foregoing statement is reduced to percentages, and gives a better reading of the distribution of the product of the coal mines, as follows, by districts:

TABLE 36—Percentages of the Output of Shipping and Local Mines, also Percentages of the Distribution, by Districts, 1905.

DISTRICT.	PERCENTAGES OF—				
	Total output.	Tons shipped.	Tons to locomotives	Tons sold to local trade.	Tons consumed or wasted at the mines.
First .....	9.04	83.37	3.77	5.11	7.75
Second .....	8.18	90.60	1.96	3.05	4.39
Third .....	7.72	91.82	1.83	3.56	2.79
Fourth.....	11.97	81.75	4.55	9.09	4.61
Fifth.....	20.39	89.05	2.55	4.31	4.09
Sixth.....	23.34	89.43	3.47	2.62	4.48
Seventh.....	19.36	88.94	3.83	1.64	5.59
Shipping mines.....	100.00	88.07	3.26	3.88	4.79
Local mines.....	100.00	...	.49	98.20	1.31

Compared with last year, the tons shipped from all the mines the present year, is only three-fourths of 1 per cent less.

The percentages of the distribution of the output of the coal of the State for six years is presented in the following table:

TABLE 37—Total Output of the Shipping Mines of the State, also Percentages of the Distribution for Five Years.

YEAR.	Total output.	PERCENTAGES OF—			
		Tons shipped.	Tons supplied to locomotives.	Tons sold to local trade.	Tons consumed or wasted at the mines.
1900.....	24,056,996	87.33	3.42	5.12	4.13
1901.....	25,526,816	88.34	3.46	4.12	4.08
1902.....	28,824,750	89.07	3.30	3.74	3.89
1903.....	33,676,537	89.33	3.27	3.59	3.81
1904.....	35,779,517	88.82	3.32	3.80	4.06
1905.....	35,956,543	88.07	3.26	3.88	4.79

LOCAL MINES.

1900.....	1,096,933	.....	5.66	85.57	8.77
1901.....	1,108,503	.....	5.84	86.62	7.54
1902.....	1,196,550	.....	1.54	89.05	9.41
1903.....	1,278,863	.....	1.29	86.86	11.85
1904.....	1,298,380	.....	2.75	89.46	7.79
1905.....	1,226,831	.....	.49	98.20	1.31

The shipping mines show quite a uniform percentage of their product, from year to year, loaded on to cars to go forward to the different markets; this year the tons shipped are slightly less than for the previous four years, the balance of the product of these mines was quite evenly divided, as supplied to locomotives at the mines, the local trade and used at the mines. The local mines show a marked decrease in tons to locomotives and used at the mines, and a like increase in tons to the local trade.

### DISPOSITION BY DISTRICTS AND COUNTIES.

For several years the disposal of the product of the coal mines of the State has been given by counties and by districts, and is again presented for the past year, in the following table:

**TABLE 38—Disposition of the Output of Shipping Mines by Counties and Districts.**

#### FIRST DISTRICT.

COUNTY.	No. of mines.	Total tons.	Tons shipped.	Tons supplied to locomotives at the mines.	Tons sold to local trade.	Tons consumed or wasted at the mines.
Grundy.....	12	1,299,247	1,230,436	.....	20,085	48,726
Kankakee.....	1	700	350	.....	.....	350
La Salle.....	18	1,633,009	1,196,873	115,903	130,442	189,791
Livingston .....	4	197,199	177,175	7,000	8,109	4,915
Will .....	4	122,127	106,495	.....	7,512	8,120
The district.....	39	3,252,282	2,711,329	122,903	166,148	251,902
Percentages .....	.....	100.00	83.37	3.78	5.11	7.74
Local mines.....	50	144,525	.....	.....	144,525	.....

#### SECOND DISTRICT.

COUNTY.	No. of mines.	Total tons.	Tons shipped.	Tons supplied to locomotives at the mines.	Tons sold to local trade.	Tons consumed or wasted at the mines.
Bureau.....	7	1,722,063	1,591,798	23,370	31,562	75,333
Henry .....	3	83,618	73,217	.....	8,101	2,300
Knox .....	2	23,800	18,120	480	4,200	1,000
Marshall .....	3	503,776	426,331	32,242	21,119	24,084
Mercer.....	9	529,992	489,967	1,712	17,728	20,585
Putnam .....	1	42,964	37,768	.....	972	4,224
Rock Island .....	2	23,256	22,055	.....	212	989
Stark .....	2	12,760	6,373	.....	5,747	640
The district.....	29	2,942,229	2,665,629	57,804	89,641	129,155
Percentages .....	.....	100.00	90.60	1.96	3.05	4.39
Local mines.....	149	270,499	.....	.....	265,154	5,345

Table 38—Continued.

## THIRD DISTRICT.

COUNTY.	No. of mines.	Total tons.	Tons shipped.	Tons supplied to locomotives at the mines.	Tons sold to local trade.	Tons consumed or wasted at the mines.
Fulton .....	20	1,379,604	1,286,138	32,435	26,258	34,773
Hancock .....	1	8,500	8,000	.....	500	.....
McDonough .....	2	12,175	12,175	.....	.....	.....
Menard .....	9	435,793	383,454	3,103	25,443	23,793
Peoria .....	19	768,278	706,695	15,310	30,281	15,992
Tazewell .....	4	170,148	151,006	.....	16,412	2,730
The district .....	55	2,774,498	2,547,468	50,848	98,894	77,288
Percentages .....	.....	100.00	91.82	1.83	3.56	2.79
Local mines .....	207	332,881	.....	.....	332,881	.....

## FOURTH DISTRICT.

COUNTY.	No. of mines.	Total tons.	Tons shipped.	Tons supplied to locomotives at the mines.	Tons sold to local trade.	Tons consumed or wasted at the mines.
Christian .....	7	837,890	630,335	89,044	63,312	75,199
Logan .....	4	384,288	293,319	25,052	42,359	23,558
Macon .....	5	196,628	50,992	.....	137,449	8,187
McLean .....	3	175,010	31,072	32,178	93,860	17,900
Shelby .....	2	105,928	69,630	16,778	13,191	6,329
Vermillion .....	22	2,464,872	2,350,294	27,383	27,149	60,046
Woodford .....	2	118,679	92,301	5,594	13,839	6,945
The district .....	45	4,303,295	3,517,943	196,029	391,159	198,164
Percentages .....	.....	100.00	81.75	4.56	9.09	4.60
Local mines .....	56	174,337	.....	.....	174,337	.....

## FIFTH DISTRICT.

COUNTY.	No. of mines.	Total tons.	Tons shipped.	Tons supplied to locomotives at the mines.	Tons sold to local trade.	Tons consumed or wasted at the mines.
Macoupin .....	17	2,514,804	2,256,842	74,200	64,156	119,606
Montgomery .....	6	468,198	411,950	9,556	32,534	14,158
Sangamon .....	33	4,346,823	3,858,245	102,999	219,307	166,272
The district .....	56	7,329,825	6,527,037	186,755	315,997	300,036
Percentages .....	.....	100.00	89.05	2.55	4.31	4.09
Local mines .....	56	106,127	.....	6,060	95,138	4,929

Table 38—Concluded.

## SIXTH DISTRICT.

COUNTY.	No. of mines.	Total tons.	Tons shipped.	Tons supplied to locomotives at the mines.	Tons sold to local trade.	Tons con- sumed or wasted at the mines.
Bond.....	1	129,815	122,274	.....	3,321	4,220
Clinton .....	7	904,826	796,272	47,834	25,386	35,334
Madison .....	19	2,935,749	2,726,788	31,162	51,068	126,731
Marion .....	7	1,086,350	796,254	169,449	58,506	62,141
St. Clair.....	58	3,335,703	3,063,963	42,978	81,415	147,347
The district.....	92	8,392,443	7,505,551	291,423	219,696	375,773
Percentages .....	.....	100.00	89.43	3.47	2.62	4.48
Local mines.....	35	114,486	.....	.....	110,004	4,482

## SEVENTH DISTRICT.

COUNTY.	No. of mines.	Total tons.	Tons shipped.	Tons supplied to locomotives at the mines.	Tons sold to local trade.	Tons con- sumed or wasted at the mines.
Franklin.....	3	136,788	122,741	.....	2,097	11,950
Gallatin.....	2	73,529	55,561	2,186	9,678	6,104
Jackson .....	9	793,890	631,829	63,626	10,296	88,139
Perry.....	22	1,253,208	1,056,095	142,131	26,249	28,733
Randolph .....	10	498,812	467,208	.....	12,001	19,603
Saline .....	5	319,295	284,249	16,383	8,107	10,556
Washington.....	2	78,315	16,582	38,230	21,122	2,381
Williamson.....	28	3,808,134	3,557,851	3,859	24,963	221,461
The district.....	81	6,961,971	6,192,116	266,415	114,513	388,927
Percentages .....	.....	100.00	88.94	3.83	1.64	5.59
Local mines.....	40	83,976	.....	.....	82,721	1,255

A detailed account has also been shown in these reports in tabular form, of the Illinois railroads, and the tonnage which each road has taken from the several coal-producing counties of the State, and transported to the markets of the country. The following table presents the record for the year:

TABLE 39—*Railroads Which Have Hauled the Coal Output of Shipping Mines of the State and the Tonnage Contributed to Each Road, by Counties—1905.*

Number.	RAILROADS AND COUNTIES.	Number mines.	TONS RECEIVED BY EACH ROAD FOR—		PERCENTAGE.	
			Shipment.	Locomotives.	Shipped.	Supplied to locomotives.
1	Illinois Central—22 counties.....	104	7,223,132	464,714	100.00	100.00

Here are forty-two railroads represented in the list; this is two more roads than shown last year. The foregoing is supplemented by an abridged table, which presents the showing more favorably. Here is brought together the activity and energy of the forty-two railroads, both in handling and consuming the coal product of the mines located in the several counties contributing the same.

The Illinois Central railroad again heads the list where it has been for the past eight years. This road for this year has received coal for transportation from 104 mines, located in twenty-two counties; the total tons carried to the markets were 7,223,132, being more than any other two roads shown in the list, and 23 per cent of all the coal hauled by all the roads.

The list follows and is given in the order of the tonnage transported by each road:

TABLE 40 — *Illinois Coal Delivered to Illinois Railroads at the Mines for Shipment and for Use on Locomotives—1905.*

This year forty-two of the fifty-six coal producing counties of the State, supplied the coal transported by the forty-two railroads as shown in the previous tables. Sangamon county, for the past several years, has held first place as supplying the largest number of tons for shipment, St. Clair county has been second for the past two years. This year Williamson takes second place, and also furnishes the largest number of tons shipped by any one county over one road.

The table by counties and railroads follows:

TABLE 41—Counties which have Produced the Commercial Coal of the State and the Tonnage Delivered to the Several Railroads in each for Transportation.

Number.	COUNTIES AND RAILROADS.	Number of railroads.	Number of mines.	Tons delivered to each railroad.	Total tons shipped and per cent to each road.

The foregoing presentation is recapitulated, with additions, showing the number of mines in each county, thus accounting for all of the shipping mines of the State, also the tons delivered to locomotives, sold to local trade, and consumed at the mines.

The recapitulation is presented according to the largest number of tons produced.

**TABLE 42—Recapitulation of Counties from which Coal is Shipped, Number of Mines, Total Tons Shipped, Supplied to Locomotives, Sold to Local Trade and Consumed or Wasted at the Mines.**

DAYS OF ACTIVE OPERATION.

The number of days of active operation of all the coal mines of the State, also the shipping and local mines, in connection with the number of mines and the number of men employed, is shown in the following table, by districts:

TABLE 43—Days of Active Operation, by Districts.

1901.....	915	44,143	174.30	331	40,940	204.40	584	3,217	157.00
1900.....	920	39,384	182.60	323	36,298	214.00	597	3,084	166.40

The flat average of working time for all the mines this year is shown to be 173.70 days; this is nearly one month of working days less than last year, and is less than shown for the past five years. The average working days, however, for the 397 shipping mines is 198.49; which is the correct standard by which to compute the possible time that miners and others were privileged to work. This class of mines, during the year, gave employment to 94.11 per cent of all the employés, and they put out 97 per cent of the total tons mined.

The average number of working days this year shows a decline of 15 days; however, employment was given to 8.48 per cent more men.

Considered by districts, it is found that the first, second, third and fourth, embracing what is known as the northern coal field, declined, on an average, more working days than the other three districts, while the latter gave work to 14.12 per cent more men than the first four districts named. The record of the State for the previous five years is also shown in the table.

The days of active operation of the shipping mines are shown in the following table, by districts for 13 years:

TABLE 44—*Days of Active Operation of Shipping Mines for a Series of 13 years.*

Examined by districts, the range of activity, in the average days, is from 185.7 in the fifth to 216.19 in the first; while the fifth and sixth districts show an average less than is found for the State. Viewing the averages for the State for the series of years, this year discloses a less number of days of operation than for any year since 1898.

### AVERAGE VALUE OF COAL.

The computations, to determine the average value of the different grades of coal at the mines, are based on the rate reported by each mine operator, and are arrived at by dividing the sum total of the sales of each grade by the number of tons sold. This average value for each grade is then applied to the total tons of coal of such grade, and the process followed and applied to the tonnage of the county, then to the district and finally to the State.

The table of total tons and values per ton is shown by districts and for the State for shipping mines, also for the state for local mines:

TABLE 45—*Total Tons and Average Value Per Ton of the Different Grades of Coal at the Shipping and Local Mines, by Districts, 1905.*

The record of the total tons of coal and of each grade, with the value per ton at the mines, has been brought forward and is presented for the past five years, in connection with the record for this year. This statement is for shipping mines only, excepting the years 1900 and 1901, which includes all mines, and offers an opportunity for a comparison of the tons of coal produced, of each grade; and the values of same per ton at the mines for a series of six years. The average value per ton of all grades this year is some less than for the two previous years, but it is considerably more than for the three years prior to the last named. For mine run coal the value this year shows a higher range than for any of the previous years, though the tonnage is less than for the two years preceding. Lump coal shows a decline of 12 cents per ton from last year, but a larger tonnage than for any previous year. However, the selling value is substantially the same as that for 1903, and, with the exception of this and last year, the highest value for the previous 18 years. Egg coal had a falling off in value from last year of 14 cents per ton, however, the number of tons sold this year were 70 per cent larger. Nut coal shows an increase in tonnage over last year of 28 per cent, with a diminution in value per ton of 18 cents, or 21 per cent. Pea coal shows an increase in tonnage from last year, but a decline of 8 cents per ton in value, while slack shows a slight decline in both tonnage and value.

The record of the tonnage of lump coal and its value per ton at the mines, has been a feature in these reports from year to year, and is again presented for 24 years:

TABLE 46—Average Value of Lump Coal Per Ton at the Mine for a Series of 24 Years, 1882-1905.

\*Shipping mines.

The tons of coal produced by the shipping mines, each year, for four years, has been divided into the several grades, as known to the trade. The percentages of these grades are given in the following table for four years.

TABLE 47—Percentages of the Different Grades of Coal of Shipping Mines for Four Years.

YEAR.	PERCENTAGES OF—					
	Mine run.	Lump.	Egg.	Nut.	Pea.	Slack.
1902 .....	23.43	49.23	2.35	5.45	15.76	3.78
1903.....	29.39	45.05	2.95	5.17	13.29	4.15
1904.....	28.66	45.55	2.74	4.32	15.51	3.22
1905.....	24.43	44.77	4.77	5.64	17.30	3.09

The grades, mine run, lump, and slack coal show a slight decrease from last year, combined, amounting to only 5.14 per cent, while egg, nut and pea coal have increased correspondingly.

## MINE EMPLOYES.

The usual classification of employés engaged working in and around the mines of the State is shown by districts in the following table:

**TABLE 48—***Classification of Employes in the Shipping Mines, by Districts, with the Employes in Local Mines.*

DISTRICTS.	ALL EMPLOYES UNDERGROUND.				Above ground.	Total.
	Miners.	Other employés.	Boys.	Total.		
First.....	5,663	1,211	253	7,127	589	7,716
Second.....	5,070	1,137	190	6,397	535	6,932
Third.....	3,078	782	46	3,906	430	4,336
Fourth.....	4,694	1,499	224	6,417	633	7,050
Fifth.....	6,646	1,957	326	8,929	940	9,869
Sixth.....	6,989	2,084	261	9,534	1,067	10,401
Seventh.....	6,279	1,845	228	8,352	1,807	9,439
The State.....	38,419	10,515	1,528	50,462	5,281	55,743
Local mines.....	2,783	179	12	2,974	513	3,487
Total.....	41,202	10,694	1,540	53,436	5,794	59,230

The whole number of employés returned for the year is 59,230, of this number 55,743 or 94 per cent are employed at the shipping mines; this is an increase of 4,359 over last year of employés in this class of mines. Compared by districts, it is found, that, of the increased number, 1,591 are reported from the seventh district, which is more than double the number of any two of the other districts. The first, second, third and fourth districts combined, show an increase of 1,192, while the fifth, sixth and seventh have an increase of 3,167. In the classification, the number of miners shown as employed in shipping mines, includes all machine operatives working in the mines; of the total increase in the number of all employés, in the shipping mines, the class designated as miners proper has increased 3,125 or 71.7 per cent, leaving an increase of 1,234 or 28.3 per cent apportioned in all other classes of employés.

Separating the employés working underground from those above, shows that 10 per cent of all employés are on the surface; while of the number of of all working underground about 24 per cent are workmen of various kinds, including boys as distinct from miners.

The classification of all employés working in and about all of the mines in the State is shown for seven years in the table following:

TABLE 49—*Classification of Employes in all Mines for Seven Years.*

YEAR.	ALL EMPLOYES UNDERGROUND.				Above ground.	Aggregate
	Miners.	Other employés.	Boys.	Total.		
1899.....	26,449	5,455	1,295	33,199	3,792	36,991
1900.....	27,875	6,047	1,281	35,203	4,181	39,384
1901.....	30,829	7,595	1,326	39,750	4,893	44,143
1902.....	32,875	7,273	1,397	41,518	4,487	46,005
1903.....	34,904	8,523	1,276	44,793	5,111	49,814
1904.....	37,987	9,812	1,562	49,361	5,413	54,774
1905.....	41,202	10,694	1,540	53,436	5,794	59,230

The total number of employés at the mines in the State has increased, during the seven years shown in this table from 36,991 to 59,230, a gain of 22,239 or 60 per cent, which is an average of 3,177 for each year. This increase has been substantially in the class of workmen known as miners; considered separately it is found that the number has advanced from 26,449 in 1889 to 41,202 for the present year, being a gain of 14,753 or 55.78 per cent.

The number of boys employed underground in the mines shows a slight decrease from last year; the total number reported for the year is 1,540 which is an increase of 245 or 19 per cent during the seven years.

A full and comprehensive presentation of the number of employés in and about the mines is disclosed in the following table, by districts, and years, for 23 years:

TABLE 50—*Employes in Coal Mines of the State for a Series of Twenty-three Years, by Districts.*

YEAR.	DISTRICTS.							
	First.	Second.	Third.	Fourth.	Fifth.	Sixth.	Seventh.	The State.

During the last nine years the average number of all employés has been returned for each year; previous to this period the largest number employed at any one time was returned and taken as the number employed.

#### PRICES PAID FOR MINING.

The prices computed as paid for both hand and machine mining, shown in these reports from year to year, are based on the prices paid at each individual mine. The county tables returned to this office give the price paid at each mine; if more than one price prevails in any one county, which quite frequently occurs, the tons and prices

are computed separately, and from such calculations, an average is found for each county, then for the district and finally for the State. The shipping mines only are considered in these reckonings:

TABLE 51—Average Prices Paid for Mining by Hand and with Machine, at Shipping and Local Mines, by Districts—1905.

DISTRICT.	MINING BY HAND.				MACHINE MINING.	
	SHIPPING MINES—GROSS WEIGHT.		LOCAL MINES—SCREENED.		GROSS WEIGHT.	
	Tons.	Price per ton.	Tons.	Price per ton.	Tons.	Price per ton.
First .....	3,252,282	\$0.7769	144,525	\$0.8199	.....	.....
Second .....	2,942,229	0.7577	270,499	0.9532	.....	.....

Fourth .....	3,994,728	0.5425	174,337	0.6223	308,567	\$0.4493
Fifth .....	4,463,383	0.5251	97,636	0.7576	*2,866,442	0 45
Sixth.....	4,616,490	0.5131	114,486	0.595	3,775,953	0.4505
Seventh.....	5,719,358	0.4699	83,976	0.5499	1,242,613	0.3923
The State.....	27,762,968	\$0.5782	1,218,340	\$0.7606	8,193,575	\$0.4432

\*In this district 8,491 tons were mined by machine in local mines at \$0.467 per ton, making a total of 8,202,066 tons mined by machines.

The average price paid for the year for hand mining is found to be 57.82 cents for the State; and ranging from 46.99 cents in the seventh district to 77.69 cents in the first.

The prices paid per ton for machine mining are found by the same process as stated for hand mining. The average prices paid in the four districts where machines are used, are found to be from 39.23 cents in the seventh district to 45.05 in the sixth, forming an average of 44.32 cents for the State.

The differential for the year between hand and machine mining in the fourth district was 9.32 cents; in the fifth 7.51; in the sixth 6.26; in the seventh 7.76.

The average prices paid for hand and machine mining for the past four years is shown, by districts, in the following table:

TABLE 52—Average Prices Paid at Shipping Mines for Both Hand and Machine Mining by Districts for Four Years, 1902-1905.

DISTRICT.	HAND MINING FOR THE YEARS—				MACHINE MINING FOR THE YEARS—			
	1902.	1903.	1904.	1905.	1902.	1903.	1904.	1905.

Here is presented in a condensed form the average prices paid for both hand and machine mining, in shipping mines only, for the past four years:

PAYMENT OF WAGES.

The payment of wages to the men working at the mines is next in importance to the rate of wages. The following table presents the record for the year:

TABLE 53—Frequency of the Payment of Wages at Shipping and Local Mines, by Districts—1905.

DISTRICT.	PAYMENTS MADE.								
	WEEKLY.			SEMI-MONTHLY.			MONTHLY.		
	Mines.	Men.	Tons.	Mines.	Men.	Tons.	Mines.	Men.	Tons.
First .....	.....	.....	.....	39	7,716	3,252,282	.....	.....	.....
Second .....	5	73	23,724	23	6,829	2,909,463	1	30	9,040
Third .....	1	14	8,500	54	4,322	2,765,998	.....	.....	.....
Fourth .....	.....	.....	.....	45	7,050	4,303,295	.....	.....	.....
Fifth .....	.....	.....	.....	56	9,869	7,329,825	.....	.....	.....
Sixth .....	.....	.....	.....	92	10,401	8,392,443	.....	.....	.....
Seventh .....	.....	.....	.....	81	9,439	6,961,971	.....	.....	.....
Shipping mines.	6	87	32,224	390	55,626	35,915,279	1	30	9,040
Local mines .....	209	1,008	272,622	383	2,439	944,509	1	40	15,700
The State .....	215	1,095	304,846	773	58,065	36,859,788	2	70	24,740

This record shows that, at the large mining plants, the payment of wages semi-monthly to mine employés, has now become quite general. The percentages of mines, men and tons, in the matter of the payment of wages are shown in the following table for 13 years.

TABLE 54—*Percentages of Mines, Men and Tons in Reference to Payment of Wages for a Series of Thirteen Years.*

YEAR.	WAGES PAID WEEKLY.			WAGES PAID SEMI-MONTHLY.			WAGES PAID MONTHLY.		
	Mines.	Men.	Tons.	Mines.	Men.	Tons.	Mines.	Men.	Tons.
1893.....	67	27.6	26.2	25	56	56.4	8	16.4	23.4
1894.....	43	11.7	9.7	46	66.6	67.2	11	21.7	23
1895.....	31	6.5	4.2	57	78.3	74.4	12	1.52	21.4
1896.....	49	7.8	5.3	37.5	74.6	12	12	17.6	21.2
1897.....	46.78	6.91	4.34	39.04	74.60	73.71	14.18	18.4	21.9
1898.....	32.23	5.36	4.99	62.32	90.25	89.78	5.45	4.38	5.23
1899.....	24.75	4.67	3.04	71.54	93.02	95.75	3.71	2.31	2.21
1900.....	33	4.12	2.57	64.8	95.04	96.84	2.2	.48	.59
1901.....	28.85	2.79	1.44	70.60	97.03	98.44	.55	.18	.12
1902.....	47	4.55	1.84	52.13	95.12	98.06	.87	.33	.1
1903.....	27.76	2.63	1.10	71.70	97.14	98.78	.54	.23	.12
1904.....	34.22	3.23	1.86	65.35	96.65	96.07	.43	.12	.07
1905.....	21.72	1.85	.82	78.08	98.03	99.11	.20	.12	.07

Here it will be noticed that, for the past eight years, wages have been paid semi-monthly to over 90 per cent of the employés at the larger plants; this year less than 2 per cent of the men are paid weekly and monthly.

#### EARNINGS OF MINERS.

The earnings of coal miners, have been shown in these reports from year to year, and are here presented for this year in connection with the same record for the past four years.

The showing for the year is by districts, with totals and averages for the State:

TABLE 55—*Hand Mining, Earnings of Coal Miners in Shipping Mines for the Year Ended June 30, 1905—By Districts.*

DISTRICT.	No. of miners.	Average days worked.	Total tons mined.	Average rate per ton.	Gross earnings.	Average tons per man per year.	Average earnings per man per year.	Average tons per man per day.	Average earnings per man per day.

Seventh.....	4,764	203.35	5,029,281	0.4699	2,363,259	1,055.68	496.07	5.19	2.44
The State.....	31,185	198.49	26,566,481	\$0.5782	\$15,353,039	851.90	\$492.32	4.29	\$2.48
1904.....	28,717	213.3	27,091,501	\$0.5989	\$16,233,869	943.39	\$565.30	4.42	\$2.65
1903.....	25,878	224.1	24,455,228	0.5699	14,043,280	944.63	542.67	4.22	2.42
1902.....	24,229	209.8	20,616,155	0.5645	11,638,120	850.88	480.34	4.06	2.29
1901.....	22,206	203.0	18,227,130	0.5690	10,372,670	821.00	467.11	4.04	2.30

In the exhibit only miners are considered, working at the mines where coal is mined by hand.

## MACHINE MINING.

The record of the undercutting of coal by machines for the year is shown in the table following, by districts, and, in the same connection the record for the past five years:

TABLE 56—*Machine Mining—Mines, Men, Machines, Tons; by Districts—1905.*

DISTRICTS.	MINES IN WHICH MACHINES ARE USED.									
	EXCLUSIVELY.				IN PART.			TOTAL.		
	Mines.	Men.	Machines.	Tons.	Mines.	Machines.	Tons.	Mines.	Machines.	Tons.

1900 .....	38	3,883	272	3,765,601	29	158	1,817,993	67	430	5,583,594

The number of mines using machines exclusively has increased over last year 30 per cent; the number of men employed at these mines 25.58 per cent; the number of machines used 40 per cent; the tons of coal cut 30.66 per cent. The growth in each particular named has been more than for any previous year. The total number of machines in use has increased from last year 25.84 per cent, and the number of tons cut 13.47 per cent. The increase in the number of machines, in mines where exclusively used, has been 106 per cent during the six years shown in the table; the number of mines, 36.84 per cent; men employed 19.37 per cent; tons undercut 70.13 per cent. For the past two years machine mining has been confined exclusively to the fourth, fifth, sixth and seventh districts.

The different machines in use and the districts where used is shown in the following table:

TABLE 57—Name and Number of Mining Machines in Use, by Districts—1905.

DISTRICT.	Harrison.	Ingersoll-Sergeant.	Sullivan.	Morgan-Gardner.	Yock.	Jeffrey.	Herzler & Henninger.	Goodman.	Link Belt.	Butler.	Total.

The number of machines in use at all mines has increased from 430 in 1900 to 784 for this year; the table reveals the increase or decrease in the number of each particular kind of coal cutting machine employed.

The mines in which machines are used exclusively for mining coal are shown in the following table, also the number and kind of machine with number of tons produced at each mine:

TABLE 58—Mines in which Machines are Used Exclusively.

			224		

In this class of mines, 224 machines have been used, producing 1,795,495 tons of coal. The same class of mines last year operated 223 machines and produced 2,237,243 tons of coal.

### POWDER USED IN MINES.

The shipping mines in which powder is used as a force in bringing down the coal, are set forth in the following table, arranged by districts. The different mines are tabulated according to output, the largest producer heading the list in each district.

TABLE 60—*Shipping Mines in which Powder is Used for Blasting Coal.*

\* Blasted off the solid.

The recapitulation of the foregoing table follows:

TABLE 61—*Recapitulation of Table 60—Shipping Mines in Which Powder is Used for Blasting Coal.*

DISTRICT.	Number of mines.	Total tons.	Number of men.	Number of kegs of powder.	Number of kegs per man.	Number of tons per keg.
First.....	30	2,384,716	4,015	28,120	7.00	84.80
Second.....	19	1,079,313	1,564	35,641	22.79	30.28
Third.....	52	2,753,823	2,999	139,770	46.61	19.70
Fourth.....	39	3,874,587	3,986	110,736	27.78	34.99
Fifth.....	56	7,329,825	6,646	207,961	31.29	35.25
Sixth.....	92	8,392,443	6,989	190,877	27.31	43.97
Seventh .....	76	6,479,404	5,808	202,703	34.90	31.97
The State.....	364	32,294,111	32,007	915,808	28.61	35.26

The foregoing gives the record concerning 364 of the shipping mines using powder for blasting down the coal. The number of men considered here are only those reported as miners.

For the State the number of kegs per man was 28.61, and the number of tons produced was 35.26 for each keg consumed. A similar statement is presented giving, by districts, an account of all the powder used in all the mines of the State, together with the number of miners, the kegs used and the tons of coal produced; also the number of kegs per man and the number of tons per keg.

TABLE 62—*Distribution of Powder Used in all Mines, by Districts.*

DISTRICT.	POWDER USED IN BLASTING COAL.					
	Mines.	Men.	Kegs.	Tons of coal.	Kegs per man.	Tons per keg.

1900.....	621	29,667	490,713	19,979,219	16.5	40.71

For the purpose of comparison the totals of the State are reproduced and added to the table for the five preceding years.

### FATAL ACCIDENTS IN MINES.

There have been 199 fatal accidents reported by the inspectors for the year; this is forty-two more than reported for last year. Omitting the fifty men killed in the explosion at the Zeigler mine, the number killed would have been 149 as against 157 reported last year. The record, however, for the year is that one man was killed out of every 299 employed underground. Considered by districts it is found that the number killed is less than last year in the first, third, fifth and sixth, the other three districts showing an increase. The seventh district shows seventy-nine men killed; this is the same number of men losing their lives, as was reported from the first district for the year 1883, when sixty-nine men met death by drowning in one mine at Braidwood.

The table following is the record for the year.

TABLE 63—*Fatal Casualties by Districts for the Year Ended June 30, 1905.*

DISTRICT.	Total number killed.	WHERE EMPLOY'D		EMPLOYES.			Total number of tons of coal mined.	Number of employés to each death.	Rate per 1,000.	Number of tons coal mined to each death.

The death rate this year, to 1,000 persons employed, is 3.4; this is the highest rate reached since the year 1883, when the exceptional disaster occurred at Braidwood. The number of employés to each man killed for the year is 298, which is the lowest number obtained for the past twenty-two years.

The record for twenty-three years is presented in the table following:

TABLE 64—*Fatal Accidents for Twenty-three Years.*

YEAR.	Number killed.	Total number of employés.	Total tons of coal mined.	Number of employés to each life lost.	Rate per 1,000.	Number of tons of coal produced to each life lost.

Averages for 23 years	83	35,410	20,166,377	427.7	2.34	243,607

Here is shown that, during the period of twenty-three years, 1,904 persons have lost their lives at the coal mines of the State; the average number of deaths per annum is eighty-three and the rate 2.34 per 1,000 employés. The average number killed, also the average number of miners and others employed at the mines, with the average

tons produced, and the proportions as to employés and tons, also the ratio of deaths to each 1,000 employed at the mines, has been compiled and is presented in the table following:

**TABLE 65—Fatal Accidents, Averages and Proportions for Nine Years, 1883-1891, and for the Succeeding Fourteen Years, 1892-1905.**

NUMBER OF YEARS.	AVERAGES.			PROPORTION OF—		Ratio per 1,000.
	Killed.	Employés.	Tons mined.	Employés to each life lost.	Tons to each life lost.	
9 years .....	58	27,623	13,227,245	476.3	208,899	2.1
10 years .....	58	28,224	13,610,748	487.5	235,073	2.1

20 years .....	70	32,531	17,730,508	467.4	254,748	2.1
21 years .....	74	33,354	18,550,741	452.5	251,657	2.2
22 years .....	78	34,328	19,392,884	442.9	250,231	2.3
23 years .....	83	35,410	20,166,384	427.8	243,607	2.3

The first line in the table gives the averages, proportions and rate for nine years, and is followed by the succeeding years, covering in all a period of twenty-three years.

Referring to the past fourteen years, it is found that the average number of killed has increased from fifty-eight to eighty-three, or 43.1 per cent; the average number of employés has increased from 27,623 to 35,410, or 28.19 per cent; the tons of output from 13,227,245 to 20,166,384, or 52.46 per cent.

The average number of employés to each life lost is forty-eight less than shown fourteen years ago; while the number of tons is less than appears for the past nine years.

The causes resulting in the death of the 199 men during the year is set forth in the following table by districts:

TABLE 66- *Fatal Accidents by Causes for 1905, by Districts, With Totals and Averages for 16 Years.*

The different causes number twenty-two, and are represented in the several districts. Falling coal and rock accounts for 40 per cent of the total number of deaths. Following the list of causes the total number of fatalities in each district is shown for sixteen years; the final line in the table of years gives the percentages for each district for the past ten years; the fourth, fifth, sixth and seventh districts are answerable for seventy-three per cent of the total number during that period.

The numerous causes reported from year to year, resulting in the killing of men working in and about the mines, have, for several years, been shown in an abridged form, under eight headings. These are continued in these reports every year, and are here presented for eighteen years.

TABLE 67—Fatal Accidents for Eighteen Years, by Leading Causes.

Percentages, 18 years..	18.72	4.33	54.46	4.33	2.45	8.61	1.26	6.84	100.00

The first column of the table, comprehends the number of deaths from all blasts and explosions; this is intended and does include all accidents resulting from the handling and burning of powder or the igniting of explosive gases, also coal, rock or clod flying or thrown in consequence of any explosion by blasting. During the eighteen years it is found that 298 men have been killed, resulting from accidents by these causes, which is an average of seventeen for each year.

Considering the past eight years, 1898-1905, covering the period in these reports, within which gross-ton mining has prevailed throughout the State, it is shown that 221 deaths have occurred resulting from these sources, this is an average of twenty-eight for each of the eight years.

The deaths resulting from falling coal and rock in the mines continues to show the preponderance of deaths brought to the working miner. The total number from these causes, for the eight years, was 479, or an average of sixty for each year.

A classification has been made of the fatal casualties by causes for the past year, also by districts, with the totals for the four previous

years. The number killed by explosions of all kinds are designated under five separate headings, the primary causes being from the explosion of powder or the igniting of gas.

For the present year eighty-two deaths occurred resulting from these explosions. Omitting from this number the forty-seven men killed by the unusual disaster at the Zeigler mine, we have thirty-five killed from these causes, which is less than for either of the two preceding years.

The record is shown in the following table:

TABLE 68—*Fatal Accidents Caused Primarily by Explosions, Falling Coal and from Other Causes, by Districts, for the Year 1905 and for the Four Preceding Years.*

DISTRICT AND YEARS.	CAUSES.					Total from blasts, etc.	CAUSES.		Total all causes.

Percentages by divisions of State, where coal is chiefly blasted from the solid.....	16.90		83.10				100.00	

This is a division of the causes of fatalities in the mines, shown by districts for five years. Observing the line of totals from explosions, the range is from five in the first district to eighty-five in the seventh; in the totals for all causes, the range is from forty-four in the third district to 163 in the seventh. The total number of men killed during the five years was 710, of this number 202 or 28.45 per cent lost their lives by explosions or resultant causes; 333 or 46.90 per cent from falling coal, rock, slate or clod, in the mines, while 175 or 24.65 per cent met their death from all other causes.

The fatal and non-fatal accidents for the year have been brought together and classified, as shown for fatal accidents in the preceding tables. The number of both classes of accidents for the year was 734, of these 199 or 27.11 per cent were fatal and 535 or 72.89 per cent non-fatal. It is shown in the table that a total of 138 are chargeable to explosions of all kinds; eighty-two or 59.42 per cent were fatal, and fifty-six or 40.58 per cent non-fatal.

The following table presents the number and causes in detail:

TABLE 71—*Fatal and Non-Fatal Accidents for the Year caused by Explosions, Falling Coal and Rock, and by All Other Causes.*

CAUSES.	CASUALTIES.		PERCENTAGES OF—		All casualties.	Percentages.

We reproduce here two tables of fatal accidents, published in the Engineering and Mining Journal, New York, in its issue of Dec. 2, 1905, for the United States and Canada, prepared by Frederick L. Hoffman, covering ten years 1895-1904.

The first of these tables, No. 72, gives the actual number of persons killed in coal mining for each of the several years by states, while the second table, No. 73, presents the number killed per 1,000 persons employed.

\* Ten years.

(Observing the totals for the whole number of years, it is found that 1,904 men have been killed in the coal mines of the State; of this number 1,015 or 53.31 per cent were killed by falling roof and sides.

The numbers shown in the foregoing table have been reduced to percentages, showing by districts for 23 years the per cent of the fatal accidents caused by falling roof and sides. While some of the districts show a large increase of this class of fatal accidents over last year, and some of the preceding years, other districts show a decided decrease. For the State the accidents from these causes for the year is only 40 per cent, being less than for any year since 1883.

	Total.....	9	14	9	40	23	25	79	199	116	83	114	270	380

It will be seen that the occupations of the miner is much more hazardous than that of any other workman in and about the coal mines; this year 162 were killed, which is 3.9 out of every 1,000 miners employed.

For the year there were 114 wives made widows and 270 children left without a father, and in all leaving 380 persons dependent.

## NON-FATAL ACCIDENTS.

The number of non-fatal accidents which have occurred in the coal mines of the State during the year is 535; this number are those who have sustained a loss of thirty or more days of time; 507 or 95 per cent of the injured were employed underground.

Considered by districts, it will be seen that the proportion of this class of accidents, compared with the number employed and the tons produced, is wholly irregular.

The following table presents the record for the year:

TABLE 77—*Non-Fatal Accidents, By Districts—1905.*

DISTRICT.	Number of men injured.	INJURED WORKING.		WHOLE NUMBER EMPLOYED.		Total number of employes.	Total tons of coal mined.	Number of employes to one man injured.	Ratio per 1000.	Number of tons of coal mined to each man injured.
		Under ground.	Above ground.	Under ground.	Above ground.					
First.....	102	100	2	7,520	637	8,157	3,396,807	80	12.50	33,302
Second.....	83	77	6	7,125	636	7,761	3,212,728	94	10.69	38,708
Third.....	23	23	.....	4,839	558	5,397	3,107,379	243	4.26	135,103
Fourth .....	102	95	7	6,727	214	7,441	4,477,632	73	13.71	43,907
Fifth .....	81	75	6	9,186	989	10,175	7,435,952	126	7.96	91,802
Sixth .....	59	59	.....	9,520	1,116	10,636	8,506,929	180	5.55	144,185
Seventh.....	85	78	7	8,519	1,144	9,663	7,045,947	114	8.79	82,894
The State.....	535	507	28	53,436	5,794	59,230	37,183,374	111	9.03	69,502

The number of persons injured per 1,000 employed is 9.03; the number per 1,000 working underground is 9.49, while the ratio is 4.85 of those employed on the surface.

The following table presents the record of non-fatal accidents for twenty-three years:

TABLE 78—*Non-Fatal Accidents for Twenty-three Years.*

YEAR.	Number of men injured.	Total number of employes.	Total number of tons of coal mined.	Number of employes to one man injured.	Rate per 1,000.	Number of tons of coal produced to one man injured.
1883.....	231	23,939	12,123,456	104	9.6	52,482

Averages, 23 years..	392	35,411	20,166,384	90.3	11.07	51,445

The number of this class of accidents for this year is considerably in excess of the number for either of the past four years.

The following table shows the occupation of those suffering injuries in the mines for the past year:

TABLE 79—Non-Fatal Accidents by Occupation and Districts With Totals and Percentages.

Observing the last column of the table, it will be seen that miners represent 57 per cent of the total number injured; this is the same per cent as reported last year. Drivers in the mines account for 19 per cent. Considered by districts, it is shown that the first, second and fourth, report much the largest number of miners injured, combined, amounting to 63.5 per cent.

The following table presents the conjugal relationship of the injured, as well as the time lost for injuries:

**TABLE 80—*Conjugal Relations of the Injured in Non-Fatal Accidents, and Time Lost, by Districts.***

DISTRICT.	Total.	Married.	Single.	Children	Depend- ents.	Number recov- ered and losing time.	Total days lost	Aver- age days lost.
First .....	102	60	42	181	202	84	5,928	70.60
Second .....	83	51	32	147	198	74	4,112	55.60
Third .....	23	12	11	12	34	23	994	43.20
Fourth.....	102	52	50	139	189	99	7,110	72.00

Sixth .....	59	39	20	102	135	51	2,611	51.20
Seventh .....	85	59	26	96	153	70	4,304	61.49
The State....	535	312	223	749	1,022	466	28,309	60.70

Of the total number injured 312 or 58.32 per cent were married men, each having an average of 2.4 children, and 3.28 persons to a family.

At the date of this report, 466 or 87.1 per cent of the men injured, had recovered so as to resume work, leaving sixty-nine or 12.9 per cent whose injuries were of such serious nature that, in all probability, very few of them will again be able to resume work in the mines. The 466 men having recovered and able to resume work lost on an average of 60.7 days each.

The causes leading up to the injuries of the men accounted for in these tables are shown in the following table. These causes are given in detail every year; this year there are twenty-four, last year the

number was thirty-two; falling coal and rock continues as the principal cause of this class of accidents. The table follows:

TABLE 81—*Causes of Non-Fatal Accidents, by Districts.*

Number.	CAUSE.	DISTRICT.							The State.	Percentages.
		First.	Second.	Third.	Fourth.	Fifth.	Sixth.	Seventh.		
1	Blasts.....			1			2	4	7	1.31

13	Falling from trestle.....				1			1	2	0.37
14	Falling into pit.....		1					1	2	0.37
15	Falling on top-landing.....		1						1	0.19
16	Flying coal.....	4			2	2	1	4	13	2.42
17	Flying iron.....		1						1	0.19
18	Gas and smoke.....				1	1	1		3	0.56
19	Machines and motors.....				1		3	7	11	2.06
20	Mule.....			1	1	4		1	7	1.31
21	Pit cars.....	21	25	6	12	38	15	12	129	24.11
22	Premature blasts.....			1		3			4	0.75
23	Railroad cars.....				2	3		3	8	1.50
24	Tail chains.....						2	1	3	0.56
	Totals.....	102	83	23	102	81	59	85	535	100.00

The final column in the table gives the percentages of the different causes; falling roof and sides represents 50.66 per cent of the total, while pit cars accounts for 24.11 per cent; these two causes comprise 400, or 74.77 per cent of the total number injured, thus leaving only 25.23 per cent distributed amongst the other twenty-two causes.

The non-fatal accidents resulting from explosions of all kinds, including flying coal, also from falls in the mines and from other causes, are tabulated in similar form and under the same headings as fatal accidents, shown in table 68, and for the past five years.

TABLE 82—*Non-fatal Accidents Caused Primarily by Explosions, Falling Coal, Rock, etc., and by Other Causes, by Districts, for the Year 1905, and for the Four Preceding Years.*

DISTRICTS AND YEARS.	Blast ex- plosion.	Blast pre- mature.	Blown out shots.	Powder ex- plosions.	Flying coal.	Total from blasts, etc.	Falling coal, rock, etc.	Other causes.	Total all causes.

\* Three explosions of gas.

† Three explosions of gas, three fire damp.

‡ Five explosions of gas.

§ Two explosions of gas.

|| Explosion of gas.

The total number of non-fatal accidents was 535 for the past year, of these fifty-three or 9.91 per cent occurred, or was traceable to explosions of different kinds; 269 or 50.28 per cent were from falling coal, rock, etc., in the mines, and 213 or 39.81 per cent from all other causes. For the five years, covered in the table, there have been 2,280 of this class of accidents. By the divisions observed, it is found that 225 or 9.87 per cent sustained injuries from explosions; 1,128 or 49.47 per cent from falls in the mines, and 927 or 40.66 per cent from all other causes. The percentages for the five years correspond very closely to those of the present year.

The non-fatal accidents for twenty-three years is shown in the following table:

TABLE 83—*Non-Fatal Accidents from Falling Roof and Sides, and Other Causes, with Percentages Caused by Falling Roof—23 Years.*

YEAR.	NON-FATAL ACCIDENTS.				YEAR.	NON-FATAL ACCIDENTS.

1894.....	521	294	227	56.43	Totals.	9,011	5,149	3,862	57.14

This table shows the total number injured, also those injured from falling roof and sides, in all the mines of the State, for a series of years. Separated from those resulting from all other causes, the total number for this year is larger than for the past four years; however, the per cent from falls in the mines is less than last year, but larger than for the two previous years. With the exception of the year 1901 the percentage of accidents from falls in the mines has been less for the past six years, than for the seventeen previous years.

The fatal and non-fatal accidents in the coal mines of the State are presented in parallel columns for a series of twenty-three years:

TABLE 84—*Total Number Killed and Injured, with Percentages of all Accidents Caused by Falling Roof or Sides for 23 Years.*

1905.....	199	535	734	40.20	50.66	47.82
Twenty-three years.....	1,904	9,011	10,915	53.31	57.14	56.47

The total number of persons killed and injured in and about the mines during the twenty-three years shown in the table, was 10,915; of this number 1,904 or 17.44 per cent were killed outright or died soon after meeting the accident, while 9,011 or 82.56 per cent were seriously injured, many of whom were crippled for life. The bottom line in the table discloses that, during the series of years presented, 53.31 per cent of the killed was caused by falling roof and sides, and 57.14 per cent were injured by the same cause.

The following table shows by percentages the increase or decrease in the number of persons employed at the mines, the tons produced and the killed and injured for twenty-three years.

TABLE 85—*Percentages of Increase and Decrease from Year to Year of Men Employed, Tons Produced, Men Killed and Men Injured for a Series of Twenty-three Years.*

### BLASTING DOWN COAL IN THE MINES.

The schedules prepared by the Bureau this year and furnished to the State inspectors, on which to collect statistics of the coal industry from the operators, contained an inquiry as to the methods used in blasting coal; whether from the solid, or, undercut before blasting, or, by both of these methods. The returns received came from 385

of the 397 shipping mines, showing, by districts, each mine, its location and the method practiced, also the tons of coal produced. The twelve mines failing to make any report on this matter, had an output of 544,003 tons.

The table following presents the record for the year, and is immediately succeeded by a summing up of the matter by districts.

The recapitulation of table 86 shows that at 242, or 62.86 per cent of the shipping mines, 20,004,242 or 56.49 per cent of the tons were reduced by the method, commonly known as blasted from the solid. At ninety-one or 23.64 per cent of the mines, 9,331,124, or 26.35 per cent, of the tons were undercut before being blasted down; while at fifty-two or 13.5 per cent of the mines 6,077,174, or 17.16 per cent, were produced by both methods.

The recapitulation follows:

TABLE 87—*Recapitulation by Districts of the Method of Mining Coal by Blasting, 1905.*

DISTRICT.	BLASTED FROM THE SOLID.		UNDERCUT BEFORE BLASTING.		BOTH METHODS USED.		TOTALS.	
	Number of mines.	Tons.	Number of mines.	Tons.	Number of mines.	Tons.	Number of mines.	Tons.

The State ...	242	20,004,242	91	9,331,124	52	6,077,174	385	35,412,540

NOTE—Twelve mines producing 544,003 tons did not report the method used in blasting.

### PHYSICAL CHARACTER OF THE COAL MINES IN ILLINOIS.

The usual table of the physical characteristics of the coal mines of the State is presented in the following table, arranged alphabetically by counties.

TABLE 88—*Physical Character of Coal Mines, 1905.*

## BOND COUNTY.

Number.	NAME OF OPERATOR.	Postoffice address of mine.	PHYSICAL CHARACTER OF MINE.								Total tons.
			Geological number of seam.	Depth of coal—feet and inches.	Thickness of seam—feet and inches.	Shaft—slope, drift.	Hoisting—steam, horse, hand.	Long wall, pillar and room.	Haulage—hand, mule, cable, electric.	Mine—hand, machine, both.

## FIRST INSPECTION DISTRICT—1905.

### TWENTY-SECOND ANNUAL REPORT.

Counties—Grundy, Kankakee, LaSalle, Livingston, Will.

HECTOR McALLISTER, *Inspector*, Streator.

HON. DAVID ROSS,

*Secretary, State Bureau of Labor Statistics, Springfield, Ill.*

SIR—In compliance with section 12 of an act of the General Assembly of the State of Illinois, defining the duties of the State inspectors of coal mines, and providing for the health and safety of persons employed therein, I herewith submit the twenty-second annual report of coal mines in the first inspection district for the year ended June 30, 1905.

The district includes the coal producing counties of Grundy, Kankakee, LaSalle, Livingston and Will. The report contains tabulated statements, showing the number of mines in operation, both shipping and local; the depth of the shafts, and the thickness and geological number of the different seams; the number of new and abandoned mines; the total number of persons employed at each mine; the tons of lump and other grades of coal produced; the price per ton paid for mining; the value of lump and other grades of coal per ton at the mine, and the aggregate value of the total product; the number of kegs of powder and the number of pounds of dynamite consumed; the casualties in and around the mines, both fatal and non-fatal; the number of wives made widows, and of children left fatherless, caused by fatal accidents; also the number of days of active operation of every mine in the district.

The following is a summary for all the counties in the district:

Total number of mines.....	89
Number of shipping mines.....	39
Number of local mines.....	50
Number of new mines.....	17
Number of abandoned mines.....	16
Number of miners.....	6,010
Number of others underground.....	1,254
Number of boys underground.....	256
Number of employes above ground.....	637
Total number of employes.....	8,157
Total tons of coal produced, all grades.....	3,396,807
Total tons of mine run.....	448,881
Total tons of lump.....	1,821,149
Total tons of egg.....	339,780
Total tons of nut.....	66,349
Total tons of screenings.....	631,586
Total tons of slack, burned or wasted.....	89,062
Average value per ton of mine run at the mine, shipping mines.....	\$1.57
Average value per ton of lump.....	\$1.581
Average value per ton of egg.....	\$1.582
Average value per ton of nut.....	\$1.31
Average value per ton of screenings.....	\$0.5581
Average value per ton of slack or waste.....	\$0.648
Aggregate value of the total product, all mines.....	\$4,630,859

Average price paid per gross ton for hand mining, shipping mines.....	\$0.7769
Average number of days of active operation, shipping mines.....	211
Number of kegs of powder used.....	30,456
Number of pounds of dynamite used.....	9,178
Tons of coal shipped from the mines.....	2,711,329
Tons supplied to locomotives.....	122,903
Tons sold to local trade, shipping mines.....	166,148
Tons sold to local trade, local mines.....	144,525
Tons sold to local trade, all mines.....	310,673
Tons consumed and wasted at the plant, shipping mines.....	251,902
Number of fatal accidents.....	9
Number of non-fatal accidents.....	102
Number of wives made widows.....	3
Number of children left fatherless.....	11
Tons of coal mined to each fatal accident.....	377,423
Tons of coal mined to each non-fatal accident.....	33,302
Number of employes to each fatal accident.....	906
Number of employes to each non-fatal accident.....	80
Rate of fatal accidents to 1,000 persons employed.....	1.1

*The following statement gives the coal production, by counties, in the First district, with the increase or decrease in each, for the years ended June 30, 1904 and 1905.*

COUNTIES.	TOTAL OUTPUT OF ALL GRADES OF COAL IN TONS.		Increase.	Decrease.
	1904.	1905.		
Grundy.....	1,405,158	1,326,109	.....	79,049
Kankakee.....	53,405	700	.....	52,705
LaSalle.....	1,773,189	1,498,853	.....	76,336
Livingston.....	150,467	244,394	93,927	.....
Will.....	68,096	128,751	60,655	.....
Total.....	3,450,315	3,396,807	154,582	208,090
Net decrease.....	.....	.....	.....	53,508

The counties of Grundy, Kankakee and LaSalle show a decrease in output of 208,090 tons for 1905; the counties of Livingston and Will show an increase of 154,582 over that of 1904, leaving a net decrease for the district of 53,508 tons. The cause of the small output shown for Kankakee county results from the closing down of the Gardner-Wilmington Coal Company's mine at Clark City for nearly eleven months.

#### 'NEW MINES.

The Wilmington Coal Mining and Manufacturing Company has opened out a new mine at Torine, Will county. This mine is located three miles southeast of Braceville. A town site has been laid out and about twenty houses have been erected. The shaft is 90 feet deep, thickness of coal seam three feet, and is No. 2 of the geological section; this will be one of the largest coal producers in the county.

The Joliet-Wilmington Coal Company has sunk a new shaft about one mile southeast of Braidwood, Will county, known as its No. 1. mine. All the machinery and top works of the old Reliance mine have been removed to the new shaft, and the old mine has been abandoned. The new shaft is 115 feet deep, thickness of coal seam three feet and is No. 2 of the geological section. This mine is equipped for a large output.

The Braidwood-Wilmington Coal Company has opened out a new mine one mile east of Braceville, Grundy county.

William Mitchell and Max Davis & Sons have opened out new mines near Morris, Grundy county.

William Bottomley and L. D. Morse have opened out new mines at Lowell, LaSalle county.

Adam Crompton, Chas. Hepp, George Steel and Harvell & Baker have opened out new mines southwest of Ottawa, LaSalle county.

Lockwood & Dietman have sunk a new shaft three miles north of Wilsman, LaSalle county.

The Star Coal Company of Kangley has sunk a new hoisting shaft at the face of No. 2 workings, about two miles west of the old shaft, doing away with the endless rope haulage.

#### ABANDONED MINES.

The following mines have been abandoned in Grundy county: The Big Four-Wilmington Coal Company No. 2, at Carbon Hill; Taylor & Cavanaugh's No. 4, at Carbon Hill; R. Blair's mine, east of Morris.

The Star Coal Company has abandoned its No. 2 mine at Kangley, LaSalle county; Thomas Smith & Sons, William Thomas & Company and Bargreen Bros. have abandoned their mines near Streator, LaSalle county.

T. B. Farrell, James Edson and William Saxby have abandoned their mines southwest of Ottawa, LaSalle county.

Alex Steel & Company, John Westerlund and Harry Wonders have abandoned their mines near Coalville, Livingston county. Beggs, Davis & Company have abandoned their mine at Fairbury, Livingston county.

#### CHANGES IN OWNERSHIP.

The Consolidated Coal & Iron Company of Chicago has purchased the mine formerly operated by the Gardner-Wilmington Coal Company at Clark City, Kankakee county. This mine was closed down in February, 1904; at that time the lower seam was being worked. The new company is now opening up the upper seam, and has purchased 80 acres of coal land, which is situated 400 feet west of the shaft. All the old workings have been closed off except the pair of entries leading toward the new coal fields; the parting and roadways around the bottom of the shaft have been retimbered and put in safe condition.

The Phoenix Coal & Mining Company of Chicago has purchased the mine formerly operated by the Manhattan Coal Company of Cornell, Livingston county.

#### IMPROVEMENTS.

##### Installation of Electric Haulage Plant.

The most notable improvement in this district made during the year has been that at the Oglesby mine of the Oglesby Coal Company, LaSalle county. This company has installed two high pressure tubular boilers, 125-horsepower, 6x18 feet, made by the Atlas Engine works; one electric generator, 125 K. W., made by the Goodman Manufacturing Company of Chicago; one high speed generator engine, 200-horsepower, made by the Ridgeway Dynamo & Engine Company, Ridgeway, Pa. The company has also installed an electric mine motor, 80-horsepower of the third rail type, also furnished by the Goodman Manufacturing Company. About 4,500 feet of entry has been laid with third rail track. An improved Ottumwa box car loader has been installed with an 80-horsepower electric motor for driving the same. Electric lights have been put in the boiler and engine rooms, shops and the entire top works, also at the bottom of the shaft, at each switch and place of refuge on the main hauling road. Four arc lights have been put in the yard adjacent to the works. About 100 pit cars have been added to the equipment of the mine; a heater has been installed for heating, with exhaust steam from the generator engine, the water for the boiler feed. A plant has also been installed for heating the main office, store buildings and the president's residence, with exhaust steam from the fan engine.

The Acme Coal Company, Streator, LaSalle county, has installed in its mine a tail-rope haulage, which has increased their output 150 tons daily.

## MINE FIRES.

On the evening of July 16, 1904, a disastrous fire broke out in the tower of the Acme Coal Company's mine at Streator, LaSalle county, by which the tower, coal washer, storage bins, engine house, and boiler rooms were destroyed. The fire also extended down the hoisting shaft about 70 feet, burning the inside curbing which had to be renewed. The fire is supposed to have originated from a spark from a locomotive, which had just pulled a train of coal cars from the mine, setting fire to the tower. The loss was about \$30,000.00, insurance \$7,500. The company at once began repairs. A new tower, coal washer, storage bins, engine house and boiler room have been erected, and the plant is now first class in every particular. The mine was again in operation September 22, 1904.

The engine house and boiler room of the Marseilles Coal Mining Company, Marseilles, LaSalle county, were destroyed by fire July 24, 1904. New brick engine house and boiler room have been erected. The mine renewed operation September 5, 1904.

## FATAL ACCIDENTS.

July 21, 1904. Robert Duffey, miner, aged 20 years, single, was instantly killed by falling rock at the face of his working place in the Brady Coal Company's mine, Pontiac, Livingston county.

August 16, 1904. Domnic Formea, miner, age 31 years, single, was killed instantly by a blast blowing through the pillar in the No. 3 mine of the Big Four Coal Company, Eileen, Grundy county.

September 29, 1904. John Delpus, miner, age 46 years, married, was killed instantly by falling rock on the entry, 42 feet from the face, in the Brady Coal Company's mine, Pontiac, Livingston county. He leaves a widow and five children.

November 25, 1904. John Corrilli, pusher, age 19 years, single, was severely injured by a loaded pit car running over him in the No. 7 mine of the Wilmington Star Mining Company, Coal City, Grundy county. Deceased was in front of the car on a steep grade, but lost control of the car. He died six days after the accident occurred.

December 9, 1904. Anton Sgro, miner, aged 30 years, single, was killed instantly by falling down the No. 1 shaft of the C. W. & V. Coal Co., South Wilmington, Grundy county. The accident occurred about 6:45 a. m. The engineer was letting down the men, nine in number, they getting on the cage at the lower landing; when they were down about 30 feet the engineer suddenly reversed the engine, hoisting them to the top at a very high speed; the cage being self dumping the men were thrown out at the top; unfortunately one fell down the shaft, the other eight were more or less injured.

December 31, 1904. John Wendel, miner, age 24 years, single, was severely injured by a fall of rock on his roadway, 45 feet from the face of his working place in the No. 5 mine of the Braceville Coal Company, Braceville, Grundy county. Deceased had quit work about 3:00 o'clock p. m., and was going out when a large rock fell on him. He was conveyed to his home where he died about 6 o'clock the same day.

January 12, 1905. John Gatti, miner, age 45 years, single, was instantly killed by falling rock at the face of his working place in the No. 3 mine of the Big Four Coal Co., Carbon Hill, Grundy county.

February 28, 1905. Louis Galetti, miner, age 50 years, married, was killed instantly by falling rock at the face of his working place in the No. 5 mine of the Braceville Coal Co., Braceville, Grundy county. He leaves a widow and six children.

May 29, 1905. Lawrence Kinder, miner, age 45 years, married, was killed instantly by a falling rock at the face of his working place in the Matthiesson & Hegeler Zinc Co's. mine, LaSalle, LaSalle county. The partner of the deceased fired a shot in the entry. Kinder was turning a room off the entry, he returned to observe the effects of the shot; his partner told him not to go

into the entry as there was a loose rock at the face; deceased sounded the stone, and said it was all right, at that moment the stone fell with the result as stated. He leaves a widow.

The tables of the fatal and non-fatal casualties follow, also the statistical tables by counties, of the output, prices and values and other detailed information, regarding the coal industry of this state.

Respectfully submitted,

HECTOR McALLISTER,  
*State Inspector of Mines, First District, Streator, Ill.*

## SECOND INSPECTION DISTRICT—1905.

### TWENTY-SECOND ANNUAL REPORT.

Counties—Bureau, Henry, Knox, Marshall, Mercer, Putnam, Rock Island, Stark, Warren.

THOMAS HUDSON, *Inspector, Galva.*

HON. DAVID ROSS,

*Secretary, State Bureau of Labor Statistics, Springfield, Ill.*

SIR—In compliance with section 12 of an act of the General Assembly of Illinois, defining and setting forth the duties of State inspectors of coal mines, and providing for the better preservation of the health, safety and comfort of persons employed in the coal mines of Illinois, I have the honor of herewith submitting to you, the twenty-second annual report of the coal mines located in the second inspection district, comprising the coal producing counties of Bureau, Henry, Knox, Marshall, Mercer, Putnam, Rock Island, Stark and Warren.

The tabular information contained in this report gives all the necessary information in regard to the number of mines, miners and other employes; the various grades of coal produced and the number of tons of each, with the selling price thereof, per ton at the mine; the disposition of the product of the mines is given, whether shipped by rail, sold to local consumers, or used for steam producing purposes at the mines; the amount of powder and dynamite used at the mines is given, with a full statement of all fatal and non-fatal accidents, ratios, averages and percentages.

The following summary for the district is presented for the year ended June 30, 1905:

Number of shipping mines .....	29
Number of mines in local trade only .....	149
Total number of mines .....	178
Number of miners employed .....	5,759
Number of others employed underground .....	1,176
Number of boys underground .....	190
Number employed on the surface .....	636
Total number of employes .....	7,761
Number of kegs of powder consumed, for all purposes .....	45,495
Tons of lump coal produced .....	2,286,758
Tons of all other grades, combined .....	925,970
Total product in tons of 2,000 pounds .....	3,212,728
Tons shipped on cars at mines .....	2,665,765
Tons sold to local consumers, shipping mines .....	89,641
Tons sold to local consumers, local mines .....	265,154
Total tons to local trade .....	354,795
Tons used for steam purposes—at mines .....	134,500
Tons supplied to locomotives—at mines .....	57,804
Aggregate value of the total product .....	\$4,611,234
Number of fatal accidents .....	14
Number of non-fatal accidents .....	83
Total number of accidents .....	97
Number of employes to each fatal acci <sup>r</sup> .....	554

Number of employes to each non-fatal accident .....	94
Tons of coal produced to each fatal accident.....	229,480
Tons of coal produced to each non-fatal accident .....	38,708
Tons of coal produced to each miner employed.....	558
Tons of coal produced to each employé—all classes.....	414
Ratio of fatal accidents per 1,000 persons employed .....	1.8
Ratio of non-fatal accidents per 1,000 persons employed.....	10.7

The following comparative table shows the product in tons of the different coal producing counties in the district, for the years ended June 30, 1904 and 1905.

COUNTIES.	TOTAL PRODUCT OF ALL GRADES OF COAL— IN TONS.		Increase.	Decrease.
	1904.	1905.		
Bureau .....	1,832,577	1,751,875	.....	80,702
Henry .....	151,887	159,019	7,132	.....
Knox .....	89,992	68,981	.....	21,011
Marshall .....	476,239	510,968	34,729	.....
Mercer .....	601,508	544,220	.....	57,288
Putnam .....	.....	42,964	42,964	.....
Rock Island .....	91,793	78,784	.....	13,009
Stark .....	61,040	38,431	.....	22,609
Warren .....	17,454	17,486	32	.....
Totals .....	3,322,490	3,212,728	84,857	194,619

Net decrease, 109,762 tons.

The counties of Henry, Marshall, Putnam and Warren show a combined gain of 84,857 tons over the year previous, while the counties of Bureau, Knox, Mercer, Rock Island and Stark combined show a loss of 194,619 tons, leaving a net loss for the district, compared with the year previous, of 109,762 tons. Putnam county enters into the computation this year, for the first time, having gone into the coal producing list by the opening of the St. Paul Coal Company's mine at Granville.

NEW MINES.

Two mines of the shipping class have gone into operation during the year. The Atlas Coal Co.'s shaft No. 2, located at Galva, Henry county, went into operation Sept. 15, 1904. It is connected by switch to the C., R. I. & P. R. R. The St. Paul Coal Co.'s shaft No. 1, located at Granville, Putnam county, went into active operation March 9, 1905. It is connected by switch with the C. M. & St. P. R. R., over which the product of the mine will be carried. This mine is of the first class. A substantial steel tower has been erected; winding engines, of the Litchfield type, have been set up, with cylinders 24 inches in diameter and 42-inch stroke, drum, 8 feet in diameter. The engine is direct acting, or first motion. A battery of four boilers has been put in, the boilers are 60 inches in diameter and 16 feet long, in fact no expense has been spared. The main object has been to make the machinery and equipment first class in every particular.

ABANDONED MINES.

One mine only of the shipping class has been abandoned during the year. The Alden Coal Co.'s mine No. 2, located at Wanlock, Mercer county, has been worked, and abandoned June 30, 1905.

CONDITIONS OF THE COAL TRADE, PROSPECTIVE MINES, IMPROVEMENTS.

The year ending June 30, 1905, when compared with the five or six years previous, has been an extremely dull one for miners and operators alike.

In the second district, the mines have been in operation a less number of days than any year since 1899; about 400 more employes have been engaged at the mines this year than last, but nearly 110,000 tons less of coal have been produced. This, added to the fact that both the mining and selling price of coal has been less per ton, it requires no stretch of the imagination to see that the financial condition of both operator and employes, during the year, in a comparative sense, has not been propitious, to say the least.

Notwithstanding the rather depressed condition of the coal trade, one new mine, at least, is being developed, which, in a short time, will materially increase the output of the district. The St. Paul Coal Co., located at Cherry, a new mining town, three miles north of Ladd, in Bureau county, has completed the sinking of both main and escapement shafts, and the shafts are already connected underground. Seam No. 2, known locally as the La Salle third vein, was pierced at a depth of 487 feet from the surface. The seam is three and one-half feet thick, with conditions excellent for long-wall mining. In sinking these shafts, however, seam No. 6 was struck at a depth of 317 feet from the surface. This seam is five feet in thickness, of seeming good quality and comparatively free from "clay slips," "horsebacks," and other irregularities so prevalent in this seam, but conditions are very favorable for the "room and pillar" system of mining. This seam, No. 6, known locally as the second vein, is being opened out on the "room and pillar" system. A steel tower is being erected; Litchfield engines—direct acting—cylinders 24x42 inches with an 8-foot drum, a battery of four boilers, 72 inches in diameter and 18 feet long, are already in position, and in a few months Bureau county will have another first class coal mine in active operation.

Among the many improvements that have been made in the district during the year, might be mentioned the very complete auxiliary air and escape shaft, 195 feet deep, sunk by the Coal Valley Mining Company at Sherrard, Mercer county.

ESCAPEMENT SHAFTS.

The following escapement shafts, with the name of the operator, location of the mine, and the depth thereof in feet, have been sunk during the year ended June 30, 1905:

OPERATOR.	Location.	County.	Depth in feet.
Atlas Coal Co., No. 2.....	Galva .....	Henry.....	61
Bates Bros.....	Kewanee .....	do .....	55
Stoddard & Summerson.....	Coal Valley.....	Rock Island ....	35
Etherly Coal Co., No. 3.....	Etherley †.....	Knox .....	57
North Main Coal Co.....	Kewanee .....	Henry.....	35
St. Paul Coal Co., No. 2.....	Cherry .....	Bureau .....	486

Nicholas Peterson* .....	Bradford .....	do .....	112

\* NOTE—This escapement shaft was sunk, but underground connections with the main shaft had not been made Aug. 1, 1905.  
† Auxiliary.

FATAL ACCIDENTS.

The following is a statement in detail of the fatal accidents that have occurred in the second inspection district, during the year ended June 30, 1905.

Aug. 1, 1904. Benjamin Clina, miner, aged seventeen years, single, was severely burned and bruised by an explosion of powder in the Alden Coal

Company's mine, No. 4, located near Viola, Mercer county. Deceased was working in partnership with his grandfather. On the Saturday evening previous a blast had been prepared but missed fire, or failed to explode; the first act of the young man Monday morning following, was to commence drilling out the missed shot, using a common steel pointed churn drill. When the work had progressed far enough to reach the powder, the drill undoubtedly struck a piece of sulphur on the side of the drill hole; this generated a spark and an explosion as a matter of course followed, burning him severely on the face, breast and arms. The force of the explosion threw him ten or twelve feet across the room, breaking his leg and otherwise severely bruising him. He died, from the injuries received, twelve hours after the accident.

Aug. 10, 1904. Joseph Ferrari, miner, aged forty-one years, was severely crushed on the head and body by a fall of coal at the face of his working room, in the Illinois Third Vein Coal Company's mine No. 1, Ladd, Bureau county. Deceased was working with his partner and was in the act of taking down a fall of coal when a large mass, weighing about two tons, came down suddenly, crushing him against the pack-wall or building. He died from the injuries sustained forty-eight hours after the accident. He leaves a widow and four children in Italy.

Sept. 26, 1904. B. Angilo, miner, aged forty-two years, married, was severely crushed internally by a fall of coal at the face of his working room in shaft No. 2, operated by the Spring Valley Coal Company, Spring Valley, Bureau county. Deceased was in the act of taking out a sprag to let down a fall of coal when a large piece weighing about one ton fell suddenly and caught him against a standing prop. He was removed to the hospital and died from the injuries received October 11, about fifteen days after the accident. He leaves a widow and two children in Italy.

Oct. 19, 1904. Joseph Benedetti, miner, aged thirty-five years, single, and Louis Paganessi, miner, aged forty years, married, were both killed instantly by being struck with the descending cage while attempting to climb to the top of the main shaft of the Marquette Coal Company, Marquette, Bureau county. The two men who lost their lives by this accident were Italians, and had been in the employ of the company about six weeks. It is customary for the men to come out of the mine from 4:00 to 4:30 o'clock, but these two men did not come out this day until about 6:00 o'clock. On their way to the bottom of the shaft, they passed some workmen making repairs on the roadway and were informed by them to wait a short time and they would have company as one of their number was going up the shaft for something that was needed on the repairs being made. They paid no attention to this advice, probably because of their ignorance of the English language, but passed on to the bottom of the main shaft, passing on their way the opening which led to the escapement in which was a proper stairway. Without notifying the engineer by signal they commenced climbing the buntons in the main shaft and when about 140 feet from the bottom the engineer, not knowing any one was making such an attempt, run the east cage down to take the water out of the cylinders, as a party intended going down; he felt a slight resistance or jar to the descending cage at a certain point, about 140 feet from the bottom. It was at this point the men, in all probability, were struck and hurled to the bottom. Their bodies were found about an hour later in the sump or cage seat at the bottom of the shaft. Paganessi leaves a widow and one child in Italy.

Dec. 10, 1904. James Gregg, stationary engineer, aged fifty-five years, married, had his skull fractured by being struck with the hauling rope of the local coal chute incline at the Spring Valley Coal Company's shaft No. 1, Spring Valley, Bureau county. Deceased was operating the stationary engine, used to haul the coal, sold to local consumers, up an incline plane to where the wagons are loaded; the car is hauled by the main rope system; then the engine is thrown out of gear and the empty car runs down the incline by force of gravity, controlled by a brake on the drum. The bolt or pin in the fulcrum broke, which rendered the brake useless, and the car, quite naturally, ran away, causing the rope to vibrate violently. Deceased was in all proba-

bility struck by the vibrating rope, and thrown against the brake band and from there to the floor where he was found a few minutes later. He did not regain consciousness and died fifty hours later. He leaves a widow and three children.

Jan. 6, 1905. John N. Gavin, miner, aged forty years, married was severely crushed by a fall of roof at the face of his working room in the Wyoming Coal Company's mine, Wyoming, Stark county. Deceased and his partner were working a room. Gavin was in the act of loading a car with coal, when a large mass of roof seven feet long and nearly five feet wide, with an average thickness of six inches, suddenly fell crushing him underneath. He died one hour after the accident. He leaves a widow and three children.

Jan. 18, 1905. Mathias Hoge, miner, aged fifty years, widower, was severely crushed by a fall of roof at the face of his working room, in the Wenona Coal Company's mine, Wenona, Marshall county. Deceased with his partner was at work in a room and had passed through a fault, which had destroyed the uniformity of the roof, and left it in a loose, broken and dangerous condition. A large mass of the roof suddenly fell without warning, crushing him underneath. The weight of the mass was about one and one-half tons; he died about thirty minutes after the accident. He is reported to have five children in Austria.

January 26, 1905. Enoch Stone, miner, aged 32 years, married, was killed instantly by a fall of roof, at the face of his working room, in the Coal Valley Mining Co's. shaft No. 2, Sherrard, Mercer county. Deceased was working alone in a room; shortly after 3 o'clock p. m., several miners working near by heard a heavy fall, but, assuming it was top coal, paid no attention to it. As none of those working near saw nor heard him for nearly half an hour, they went into his room to investigate, and found him under a heavy fall of roof, dead. The mass that fell was fifteen feet long and twelve feet wide, with an average thickness of three inches. He leaves a widow and two children.

February 8, 1905. James Reid, sinker, aged 27 years, single, was killed by being struck on the head with a sinking bucket, in the new shaft being sunk by the St. Paul Coal Co., Cherry, Bureau county. Deceased was at work at the bottom of the shaft, 230 feet from the surface; the top of the shaft was protected by the usual folding doors, with two topmen in attendance. The empty bucket had been lifted from the doors, and the top-man in charge of the signals had raised his half of the doors, the other attendant had not gotten his half raised, when the signal was given to the engineer to lower; the bottom of the bucket struck on the edge of the half raised door, tipped over, and the safety hook, so called, became detached, the bucket falling to the bottom of the shaft, with the result as stated.

February 27, 1905. Lolli Telespero, miner, aged 44 years, married, was killed instantly by a fall of coal at the face of his working place in shaft No. 1, of the Spring Valley Coal Co., Spring Valley, Bureau county. Deceased was in his regular working place and in the act of cutting a sprag to let down the coal, when a large mass of coal and roof suddenly fell, crushing his head. The mass of coal and roof that fell would weigh about one ton. He leaves a widow and six children.

March 1, 1905. Frank Romesburg, driver, aged 27 years, married, was severely crushed by falling in front of a trip of loaded pit cars, in the Empire Coal Co's. mine, No. 3, Gilchrist, Mercer county. Deceased was coming out of the main north entry with a trip of six loaded pit cars, riding on the tail chain and draw-bar of the front car—a customary but very dangerous proceeding—when by some means he lost his footing and fell in front of the trip. One car passed over him, and he was found under the second one. He died twenty hours after the accident. He leaves a widow and one child.

April 12, 1905. M. L. Kearns, miner, aged 66 years, married, received a severe jar by the cage, on which he was coming up the shaft, dropping about thirty feet to the bottom, in Ed. Donahue's local mine, near Sheffield, Bureau county. Deceased and another miner were coming up the shaft, which is seventy-five feet deep and operated by horse power; the descending cage stuck in the shaft, and the gin-horse kept going; this caused the rope on the *drum to drop down on the spindle*, and the ascending cage, on which the men

were, dropped slowly to the bottom of the shaft, injuring the foot and leg of Kearns, the other man on the cage was not injured. Kearns did not seem badly hurt, but in about six days pneumonia set in, and he died ten days after the accident. The opinion of a physician was that the shakeup to the system by the cage dropping, was a potent factor in setting up the pneumonia, therefore, this is given as a fatal accident, due to injuries received in a coal mine. He leaves a widow but no minor children.

June 28, 1905. A. B. Moore, miner, aged 36 years, married, was killed instantly by being struck on the head with coal flying from a blast, in the Alden Coal Co's. mine, No. 2. Wanlock, Mercer county. Deceased, with his partner, was driving an entry north, coming towards them from the south was a room, to be used as an air course, when connection was made. These places had come so close together that the mine manager, fearing that one or the other might blow through, had given orders to the miner driving south not to fire his shots, but leave them ready, and company men would fire them after quitting time. The last named miner disregarded the orders, and agreed with deceased to give him due notice before lighting his shot, the intervening coal had become so thin that they could talk to each other. Both parties prepared their shots, the miner driving south gave the usual signal that he was going to light his shot, and did so. The flame from his shot evidently exploded the powder in the hole coming from the opposite direction, tearing off the heel of the shot in the entry, and coal flying therefrom, struck deceased. He leaves a widow and one child.

Following are the usual tables and schedules for each county in the second inspection district.

Respectfully submitted,

THOMAS HUDSON,

*State Inspector of Mines, Second District, Galva, Ill.*

## THIRD INSPECTION DISTRICT---1905.

### TWENTY-SECOND ANNUAL REPORT.

Counties—Cass, Fulton, Hancock, McDonough, Menard, Peoria,  
Schuyler, Tazewell.

JAMES TAYLOR, *Inspector*, Peoria.

HON. DAVID ROSS,  
*Secretary, State Bureau of Labor Statistics, Springfield, Ill.*

SIR—I have the honor to submit the twenty-second annual report of coal mines located in the third inspection district. The coal producing counties of which are Cass, Fulton, Hancock, McDonough, Menard, Peoria, Schuyler and Tazewell.

The tabular part of the report gives the number of tons of coal mined; the number of kegs of powder consumed; the number of boys over 16 years of age working in the mines, also the number of miners and other employes; the number of shipping and local mines; the aggregate value of the total product at the mines; the thickness of the coal seams, with the geological numbers and the depth of the seams below the surface; the number of casualties, fatal and non-fatal; the number of mines, old, new, and abandoned; the total tons of the different grades of coal produced, and the number of days of active operation of each mine during the year.

The whole number of mines reported for the year is 262, this is twenty-four mines more than reported for last year. In the following summary may be found the salient features given in detail in the county tables:

Number of counties producing coal .....	8
Total number of mines.....	262
Number of shipping mines.....	55
Number of local mines .....	207
Number of new mines.....	35
Number of mines abandoned .....	11
Total number of employes.....	5,397
Number of miners .....	3,952
Number of other employes, under ground, including boys .....	887
Number of employes above ground.....	558
Number of kegs of power used .....	142,231
Total tons of coal produced .....	3,107,379
Tons of mine run .....	624,400
Tons of lump.....	1,577,792
Tons of egg .....	228,659
Tons of nut.....	150,467
Tons of pea or screenings.....	376,569
Tons of slack or waste.....	149,512
Tons of coal shipped from mines.....	2,547,463
Tons supplied to locomotives.....	50,848
Tons sold to local trade.....	431,775
Tons consumed or wasted at the mines.....	77,288
Aggregate value of the total product.....	\$3,570,324
Average value per ton, all grades.....	\$1.149

Average number of days, shipping mines .....	198
Average price paid for hand mining, shipping mines.....	\$0 5841
Number of fatal accidents .....	9
Number of non-fatal accidents.....	23
Number of tons of coal to each fatal accident.....	345,284
Number of tons of coal to each non-fatal accident.....	135,103
Number of employes to each fatal accident.....	600
Number of employes to each non-fatal accident.....	235
Ratio of fatal accidents per 1,000 persons employed.....	1.7

The following table shows the product of each county in the district for the years 1904 and 1905, with the gain and loss in tonnage:

COUNTY.	TOTAL PRODUCT OF ALL GRADES OF COAL—TONS.		Increase.	Decrease.
	1904.	1905.		
Cass .....	2,780	2,490	.....	190
Fulton.....	1,284,279	1,439,489	155,210	.....
Hancock .....	12,270	11,560	.....	710
McDonough.....	60,574	43,944	.....	16,630
Menard.....	543,763	448,433	.....	95,330
Peoria.....	939,737	904,892	.....	34,845
Schuyler .....	18,400	21,470	3,070	.....
Tazewell.....	196,611	235,001	38,390	.....
Totals .....	3,058,414	3,107,379	196,670	147,705

Net increase.....48,965 tons.

The counties of Fulton, Schuyler and Tazewell, show a combined increase over last year of 196,670 tons, while the other counties show a decrease aggregating 147,705 tons, leaving a net gain over last year of 48,965 tons. The increase in the output this year over that of 1903 is approximately 400,000 tons.

The number of shipping mines in the district is 55, the same as last year, while the number of local mines has increased from 183 to 207; there has been an increase of 589 in the number of employes, of whom 480 were miners proper.

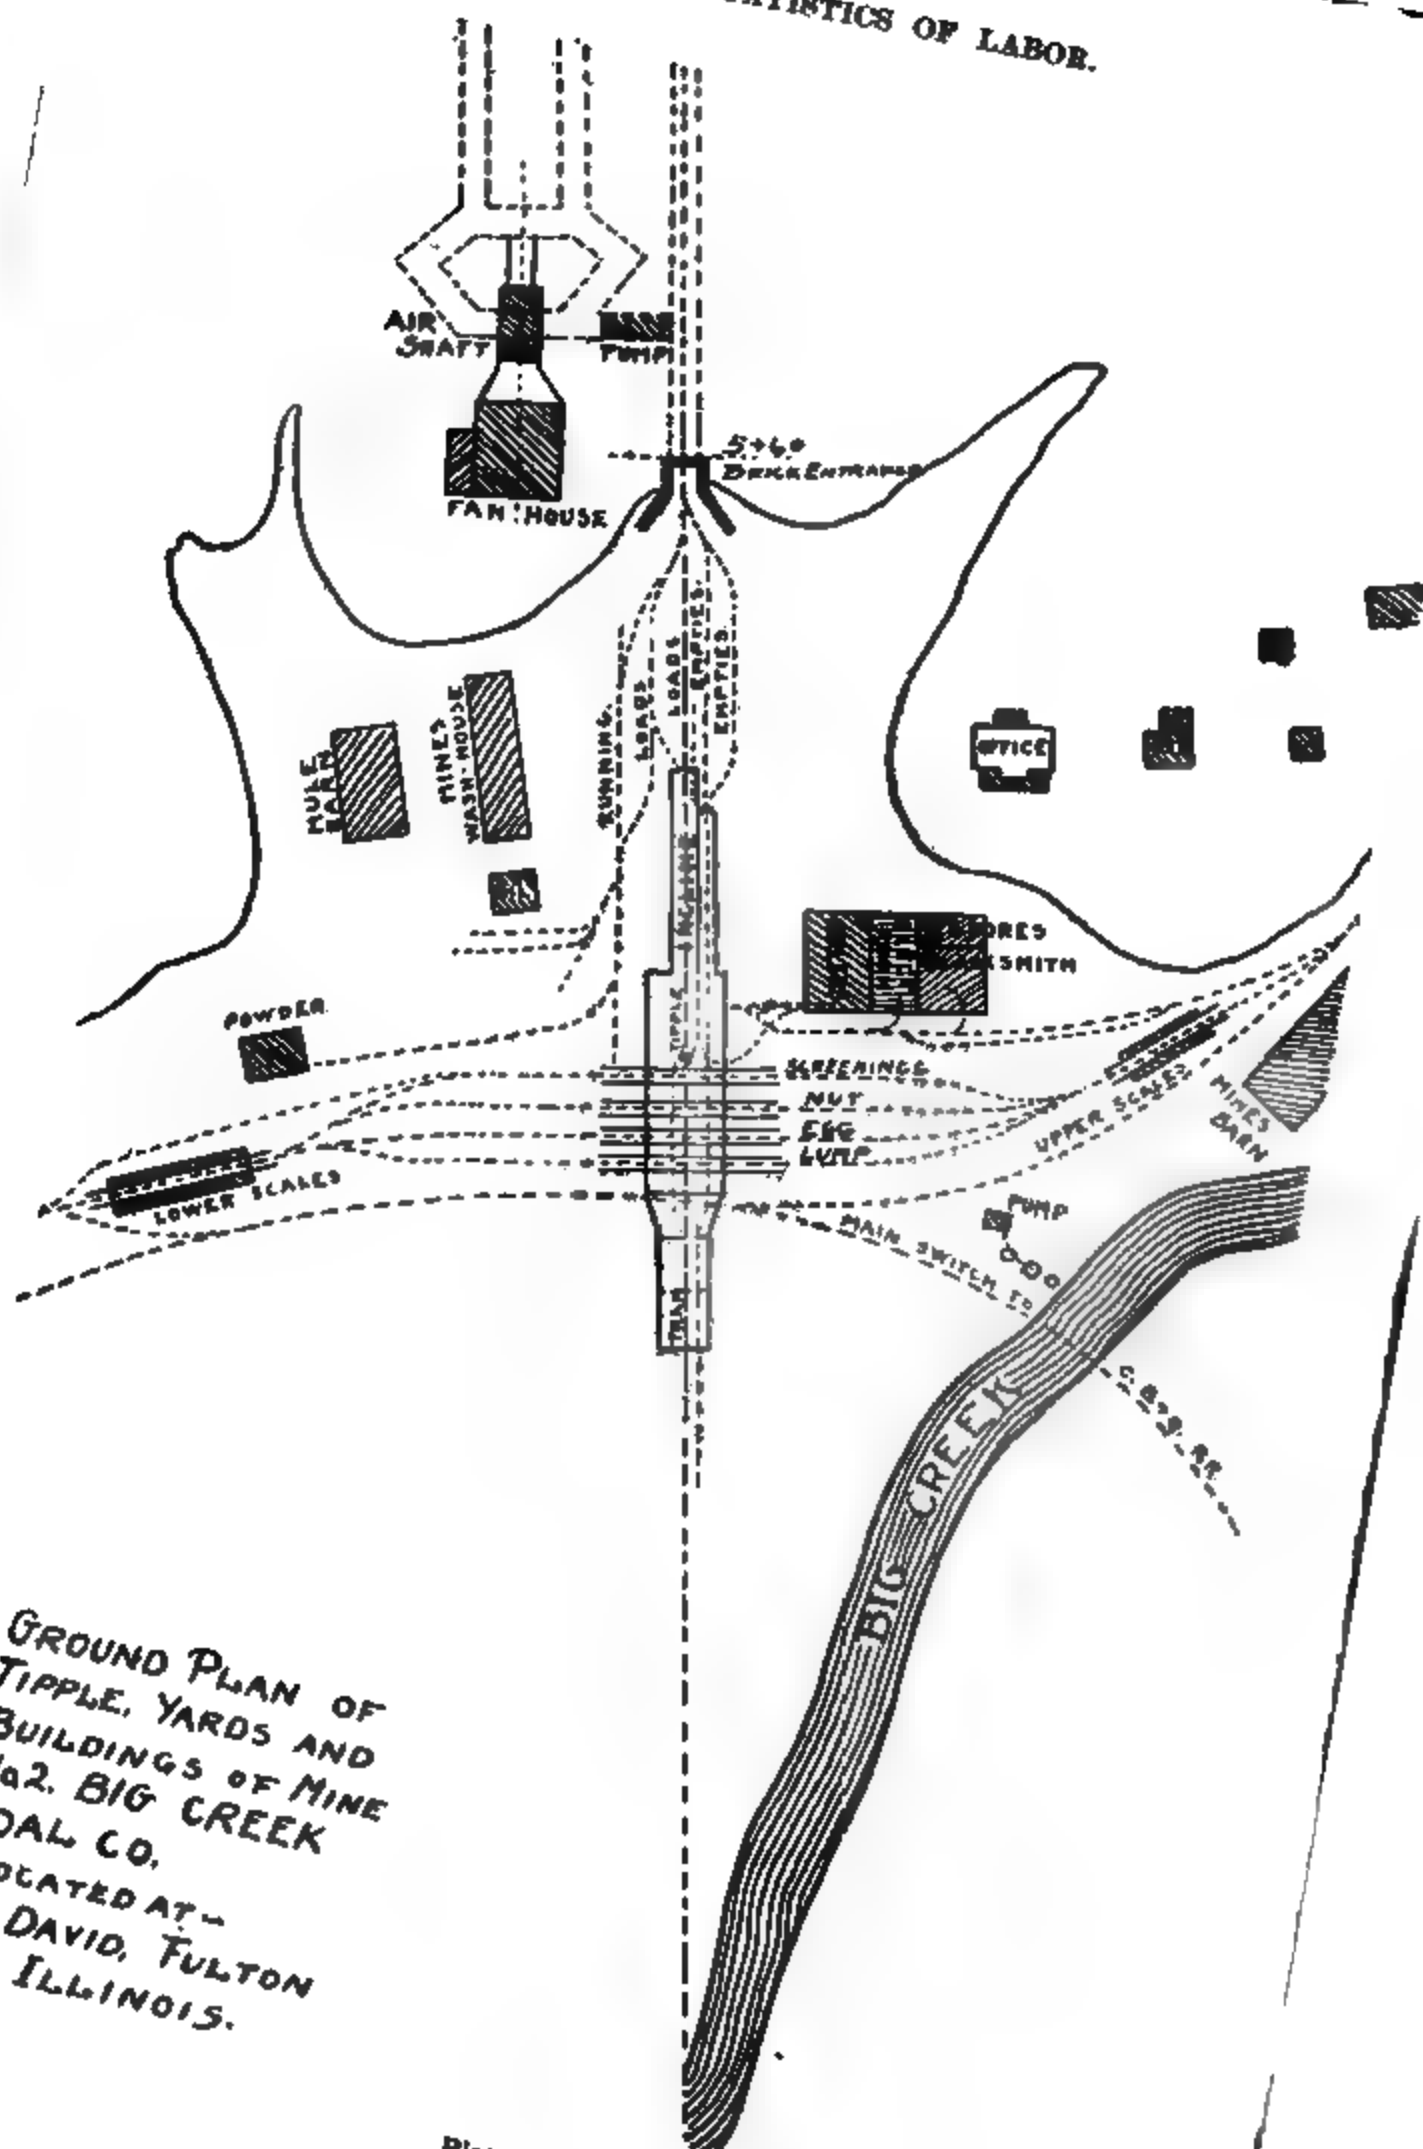

#### ESCAPEMENT SHAFTS.

For several years past Sholl Brothers and the Collier Co-Operative mines, which are located at Bartonville, Peoria county, have used a connecting passageway for an escapement. This passageway was condemned by me on account of its unsafe condition, it having been neglected by each company and allowed to become impassable. Both companies were notified to sink an escapement shaft to their mines, and considerable difficulty was experienced in prevailing upon them to start the work of sinking, finally I succeeded in getting them started.

Sholl Brothers got their escapement shaft down to the coal and connections completed with their main entries Nov. 20, 1904. Dec. 9, 1904, a fire was started on the main entry in this mine, by a trapper, who had dropped his lighted lamp on a quantity of hay, which had been allowed to accumulate at the door, which he was attending; the fire burned the door, also the timbers, and all combustible material for a distance of several hundred feet along the main entry. The mine timbers were burning fiercely and the hoisting shaft being the down-cast, the air current was conveying the smoke and fire towards the working face of the mine, where 121 men and boys were working. The engineer reversed the fan, thus making the hoisting shaft the up-cast, and thereby reversing the air-current, which prevented the fire and smoke from reaching the men, until they had had sufficient time to climb the ladder up the escapement shaft (the stairways had not been placed) to the surface.

## STATISTICS OF LABOR.

GROUND PLAN OF  
TIPTON, YARDS AND  
BUILDINGS OF MINE  
No. 2, BIG CREEK  
COAL CO.  
LOCATED AT—  
ST. DAVID, FULTON  
Co. ILLINOIS.

There were a number of old miners who were unable to climb the ladder, and were hoisted from the mine in the sinking bucket, which had not been removed from the escapement shaft.

At the time of the fire, if the new escapement shaft had not been sunk and connections been made, every one of the men in the mine would have perished. The fire was extinguished, after causing about \$2,000 damage to the main entry.

The escapement shafts at the mines of Sholl Brothers and the Collier Co-operative Company are now completed and in lawful condition.

#### NEW MINE.

The following constitutes in a general way a description of the equipment of mine No. 2 of the Big Creek Coal Company, located at St. David, Fulton county, including all machinery used in connection with the mining operations at this mine.

*The Tipple*—The method of handling the coal is by means of a link-belt, machinery chain-haul, which operates on an incline of 25 per cent; the haul-up chain conveying the coal to an automatic Phillips cross-over dump; the empty cars are returned to the lower yards by means of a kick-back, an auxiliary and a down-haul chain; the chain-haul is operated by a 10x14-inch Houston, Stanwood & Gamble engine. The shaker screens are of the Duncan type, and are driven by a 12x16-inch Atlas engine; the capacity of the chain-haul is from 2,200 to 2,500 tons per day of eight hours. The tipple is of mill construction covered with corrugated iron. An extension of 100 feet has recently been made to the tipple as a tramway at the end of which the slate is dumped from a height of about forty-five feet, the slate is handled in the same manner as the coal.

The power house and the boiler room equipment consists of three sixty-six-inch by eighteen feet Kewanee boilers, a total of 345 horsepower; also one fifty-four-inch Stillwell heater, and one 10x6x12-inch Epping-Carpenter feed pump, also one 7x12 foot water tank. The water for the boilers is obtained from Big Creek, being filtered before being admitted into a No. 4 Cameron pump, and forced into the tank, which is located in the boiler house; the two pumps located in the boiler house and in the pumping station in connection with the tank, furnish fire protection for the entire plant.

The generator room consists of one 100 Kilowatt-Goodman generator, which is driven by a 16x16-inch McEwen engine, having a 168 horsepower. This equipment furnishes the power for a twelve-ton Goodman motor and also the lighting for the entire plant. This room is so constructed that the machinery can be duplicated at any time; in the same building is located the blacksmith and repair shops, an electrical store room, also a general supply room.

*The Fan House*—This building is located on the top of a hill some 500 feet from the power house. The fan is of the Duncan type, twenty-two feet in diameter, and is driven by a 14x20-inch Atlas engine; the steam is conveyed to this engine from the power house, underground, and the exhaust is returned by an overhead main to the wash house, furnishing water to the miners for washing.

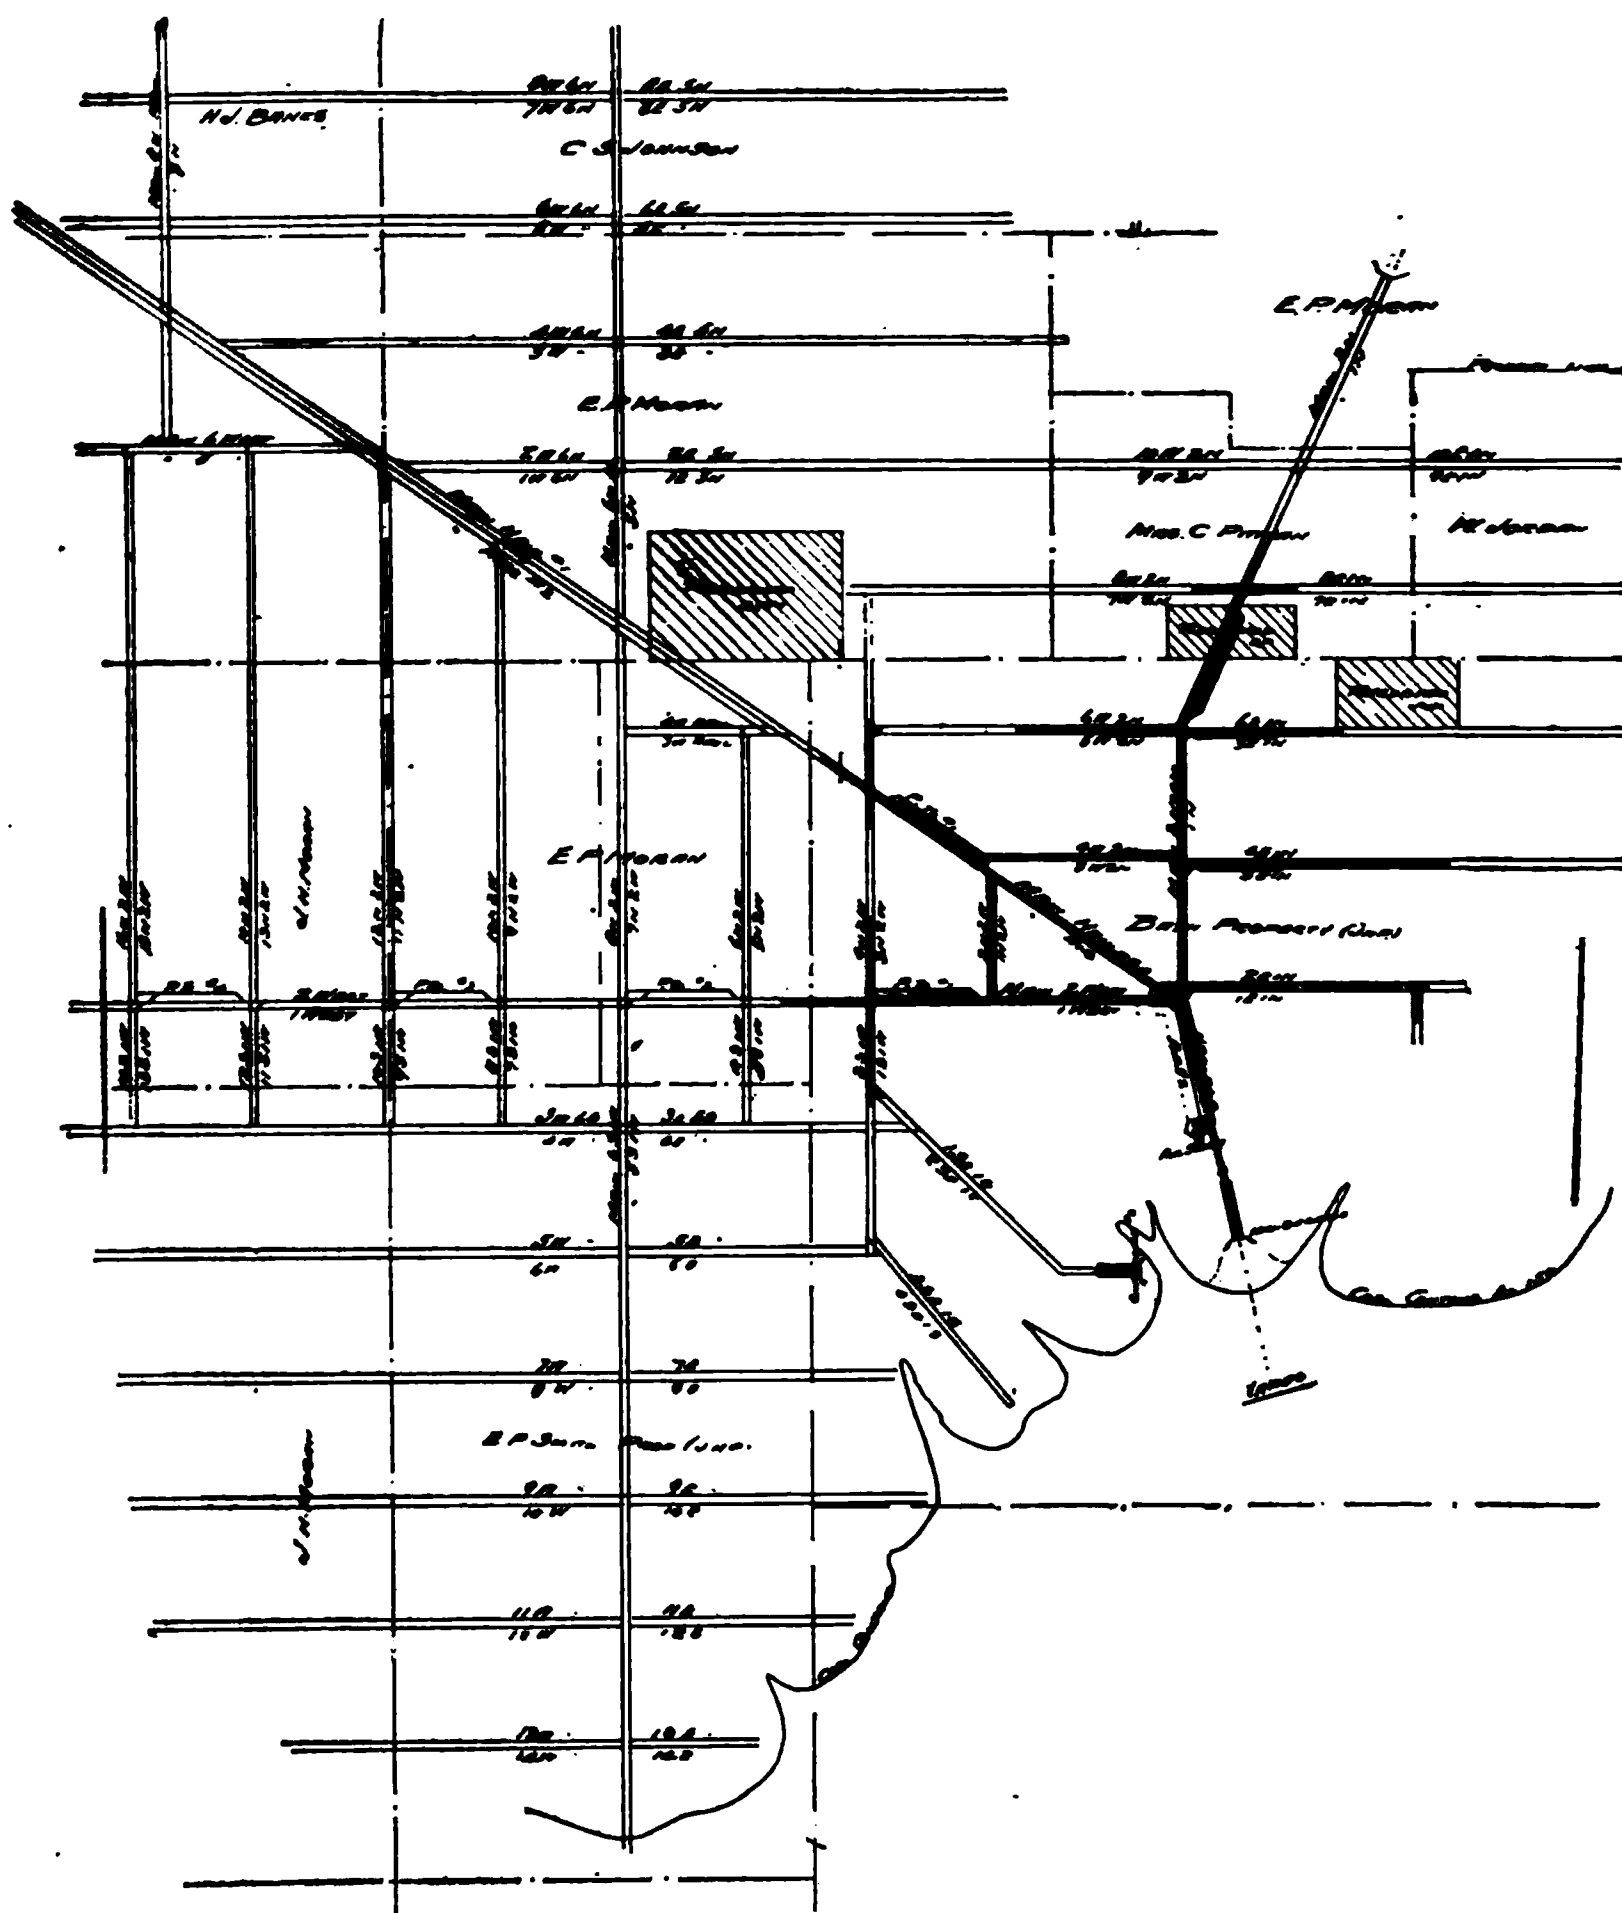

The other buildings, which constitute a portion of this plant, are the powder house, oil house, pumping station, wash house, mule barn, miners barn, office building, and residences. Plate 1 gives a general plan of the yards and buildings.

Following is a general description of the mine and the equipment for handling the coal.

The arrangements for handling the coal from the mine to the tipple consists, at the present time, of one twelve-ton Goodman motor and about 300 pit cars, of a average capacity of from 3,300 to 3,500 pounds; the coal is gathered from the rooms in cars which are hauled by mules to the partings, where the cars are readily accessible to be attached to the motor; the conditions for thus handling the coal are very favorable, the entrance being located on the low side of the dip, which has a rise of about ten feet to the mile, in a north-westerly direction from the entrance, giving all the advant.

age possible in favor of the hauling of the loads. The motor can handle very easily, on a single trip, from sixty to eighty cars. From the entrance of the mine to the foot of the incline the loaded tracks are on about a  $1\frac{1}{2}$  per cent grade, and can be easily handled on this grade; on the empty tracks the grade is about  $1\frac{1}{4}$  per cent:

The water in the mine is handled by means of a No. 7 Knowles pump, which is located immediately between the air shaft and the main entry, where the water is pumped into a 12-inch sewer that extends some 500 feet inside of the mine. Plate 2 gives a general idea of the layout of the inside of the mine.

RESPECTIVE MINE PLAN  
ENTRIES - Mine No 2  
BIG CREEK CO.  
St. Louis, Mo. & Kansas  
June 12, 1900  
J. C. Baker Co.  
Note: This plan shows the layout of the mine as it was in 1900.

All the different departments of the mine, as well as the inside of the mine, also the different mines owned by this company, are connected directly with the main office by an independent telephone system which brings the entire system in close communication. The company has under consideration and will probably construct within the next year another outlet to the mine, with increased facilities and trackage for handling the coal outside of the mine.

#### FATAL ACCIDENTS.

Aug. 22, 1904, R. M. Foster, miner, aged 32 years, single, was killed in Newsam Bros.' mine, Kingston, Peoria county, while drilling out a shot in his room, which had failed to explode the night before. It is assumed the drill struck a piece of sulphur, generating a spark and igniting the powder, the explosion following. The partner of the deceased, Ed Taylor, was in the room at the time of the accident, and was severely burned and cut on the back and face by flying coal and rock.

Nov. 14, 1904, John Wilson, shot firer, aged 55 years, single, was asphyxiated by powder smoke while firing shots for the miners working in the Phoenix Coal Co.'s mine, Wesley City, Tazewell county.

Feb. 1, 1905, John Kochin, miner, aged 28 years, single, was killed in the Tallula Coal Co.'s mine, Tallula, Menard county, by a fall of rock while working in his room. Deceased had been notified by both the mine manager and pit committee of the dangerous condition of the roof in his room, and had been advised to keep out until the timbermen had secured it. Kochin was an Austrian, and did not understand the English language nor comprehend the warnings given to him.

Feb. 13, 1905, L. Moore, miner, aged 42 years, married. was severely injured in the East Cuba Coal Co.'s mine, Cuba, Fulton county, when passing the crosscut in his room. A shot that had been fired in the second room from his blew the coal through into the crosscut, the flying coal striking him on the head. He died four days after the accident, leaving a widow and three children.

March 7, 1905, Arthur Finney, shot firer, aged 30 years, single, was killed in the Monmouth Coal Co.'s mine, Brereton, Fulton county, by a shot blowing through the entry pillar while he was lighting another shot on the parallel entry. The flying coal broke his ribs, a part of a broken rib penetrating his heart.

May 21, 1905, Joseph Dynjewic, miner, aged 21 years, single, was killed in the Maplewood Coal Co.'s mine No. 2, Farmington, Fulton county. One of the drivers, being desirous of laying off from work in the afternoon, the deceased was employed to drive a mule the rest of the day. He made one trip on the west side, bringing the loaded cars to the bottom of the shaft. The mule, in turning out of the track, turned to the right instead of the left. Dynjewic got in front of the cars and attempted to stop them, but was pushed under the descending cage, which killed him.

May 30, 1905, William Johnson, miner, aged 27 years, single, employed at the mine of the Greenview Coal Co., Greenview, Menard county, was killed while riding on an electric motor, coming in contact with the wire. He had finished his day's work and was riding to the bottom of the shaft.

June 3, 1905, William Panko, miner, married, aged 60 years, and his son, William, single, aged 21 years, were working in the mine of the South Mountain Coal Co., Petersburg, Menard county. Both were burned severely by an explosion of powder while filling a cartridge, a spark from a lamp igniting the powder caused the explosion. The father died at 6:00 p. m. the same day; the son died the next day. The father left a widow and three children.

The tabulation of the fatal and non-fatal accidents, and of the output of the mines, with other detailed information, by counties, follow.

Respectfully submitted,

JAMES TAYLOR,

*State Inspector of Mines, Third District, Peoria.*

## FOURTH INSPECTION DISTRICT—1905.

### TWENTY-SECOND ANNUAL REPORT.

Counties—Christian, Edgar, Logan, Macon, McLean, Shelby, Vermilion,  
Woodford.

THOMAS WEEKS, *Inspector*, Bloomington.

HON. DAVID ROSS,

*Secretary, State Bureau of Labor Statistics, Springfield, Ill.*

SIR—In compliance with the law of the State of Illinois, defining the duties of the State Inspectors of Coal Mines, I have the honor to herewith submit the twenty-second annual report of the coal mines in the Fourth Inspection district. The tabular statements in this report contain the different items called for in the schedules.

The following is a summary of the items contained in the report:

Number of mines.....	101
Number of new mines.....	26
Number of abandoned mines.....	21
Number of shipping mines.....	45
Number of local mines.....	56
Tons of mine run coal.....	2,658,764
Tons of lump coal.....	1,131,391
Tons of egg coal.....	51,471
Tons of nut coal.....	194,102
Tons of pea or screenings coal.....	314,155
Tons of slack or waste coal.....	127,749
Total tons of all grades of coal.....	4,477,632
Total output for six months ended December 31, 1904.....	2,163,195
Total output for six months ended June 30, 1905.....	2,305,682
Average value of coal per ton, mine run, shipping mines.....	\$1.1668
Average value per ton of lump, shipping mines.....	\$1.415
Average value per ton of egg, shipping mines.....	\$1.3164
Average value per ton of nut, shipping mines.....	\$0.9972
Average value per ton of pea or screenings, shipping mines.....	\$0.4325
Average value per ton of slack or waste, shipping mines.....	\$0.2839
Aggregate value of total product, all mines.....	\$5,142,840
Tons loaded on cars for shipment.....	3,517,943
Tons supplied to locomotives at mines.....	196,029
Tons sold to local trade.....	565,496
Tons consumed or wasted at the mines.....	198,164
Average number of days of active operation, shipping mines.....	206
Tons mined by hand.....	4,169,065
Tons mined by machine.....	308,567
Number of machines in use.....	46
Number of miners.....	5,000
Number of other employes underground.....	1,503
Number of boys underground.....	224
Number of employes above ground.....	714
Total number of all employes.....	7,441
Number of kegs of powder consumed.....	115,838
Amount of dynamite used, pounds.....	6,815
Number of fatal accidents.....	40
Number of non-fatal accidents.....	102

Number of wives made widows.....	25
Number of children left fatherless.....	58
Number of employes to each fatal accident.....	186
Number of tons of coal to each fatal accident.....	111,941
Ratio of fatal accidents per 1,000 persons employed.....	5.2
Number of employes to each non-fatal accident.....	73
Number of tons of coal to each non-fatal accident.....	43,907

#### NEW MINES.

The Stonington Coal Co. has completed the sinking of a new shaft at Stonington, Christian county, located on the Wabash railroad east of Taylorville. The seam is No. 6 of the geological section and at a depth of four hundred and eighty-one feet; the thickness of the coal is seven feet and three inches. The sinking of the escapement shaft was begun June 1, 1905, and will be completed by the time the tower, engine and boiler rooms are finished, and the necessary machinery is in place.

The Dering Coal Co. of Westville has put in operation two new mines, Nos. 3 and 4, which were sunk last year and has also completed the escapement shaft to both of these mines.

The Century Coal Co. of Tower Hill, Shelby county, the Blue Mound Coal Co. of Blue Mound and the Manufacturers and Consumers Coal Co. of Decatur, Macon county have also completed escapement shafts during the last year.

#### ABANDONED MINES.

There has been no large mines abandoned during the year. However, a number of small mines have been abandoned, or have gone out of business, while a like number have taken their places, so that the total number of mines is about the same as last year.

#### PROSPECTIVE MINES.

The Lovington Coal Mining Co., Lovington, Moultrie county, is still going on with sinking operations of its mine at that place; the sinking is now down to the solid strata, a depth of one hundred and sixty feet from the surface. During the sinking fifty-five feet of sand and gravel was encountered, also an immense quantity of water had to be contended with. The company is now putting in inside timbers and concrete, after the completion of which it does not anticipate any more trouble in sinking the shaft.

The Vermilion County Coal Co. has begun the sinking of a new shaft on the Big Four railroad near Georgetown, Vermilion county.

#### IMPROVEMENTS.

The Citizen's Coal Co., Lincoln, Logan county, has installed a new Cappel fan, 15 feet in diameter, from which is expected a decided improvement in the ventilation of its mine.

The Newbent Coal Co., Pana, Christian county, has also put in a 12½-foot Cappel fan, which has greatly improved the ventilation in that mine; the company has also put in shaker screens.

The Penwell Coal Mining Co., Pana, Christian county, has raised the tower at its mine, and is also putting in shaker screens.

The Kelleyville Coal Co., Kelleyville, Vermilion county, has extended the electric haulage on the west side of its No. 2 mine of that place.

The Dering Coal Co., Westville, Vermilion county, has made valuable improvements during the year at its No. 2 mine. A compressed air punching machine of the Harrison type has been installed, operated by a Norwalk air compressor. This is only for the purpose of driving narrow work. A Westinghouse 150 K. W. Generator, driven by a 19x18 inch 200 R. P. M. Ideal engine has also been installed; this electrical equipment is for the purpose of furnishing power for running four gathering motors of the Westinghouse-Baldwin type, to haul coal from the rooms. It is expected, when these motors are thoroughly equipped with experienced operators, all the coal will be hauled from the rooms, dispensing with mules in this mine.

In addition, this company has sunk mines Nos. 3 and 4 during the year. The size of the hoisting shaft is 12 x 14 feet; the depth to the coal is 187 feet at the No. 3 mine and 204 feet at the No. 4. At the latter mine, the air and escapement shaft is completed and connections have been made. Connections at the No. 3 mine will be made within a very short time. The equipments at these mines are as follows: No. 3 is equipped with a 24 x 36 inch hoisting engine, made by the Aetna Foundry and Machine Co., of Springfield, Illinois, having a steam reverse and a steam brake. also an automatic cut-off. The cages are of the Halbert Automatic self-dumping type, using one and three-eighths inch cable; the cars are of 9,000 pounds capacity, making a very complete hoisting outfit.

The engine room, boiler room and blacksmith shop are built of hollow block made by the Ayer-McAyerel Co., of Brazil, Indiana. the floors are of concrete and the roofs are granite. Both of these mines are equipped with the Sullivan straight line air compressors. driving punching machines of the Sullivan type for the driving of narrow work only. The No. 4 mine is equipped with a 24 x 36 inch hoisting engine, manufactured by the Danville Foundry and Machine Co., also a Halbert-Automatic self-dumping cage; this hoist will handle cars containing 9,000 pounds of coal at each lift. The boiler room is equipped with two 72 inch by 18 feet tubular boilers, with a working pressure of 150 pounds; the engine room, boiler room and blacksmith shop are of the same construction as at the No. 3 mine.

The Lincoln Coal Co. has repaired and installed the fan in the bottom of its mine, this is the fan used before the fire in this mine, December, 1903. It is expected that this will greatly improve the ventilation in the mine.

#### BUSINESS CHANGES.

The Kelleyville Coal Co., has disposed of its mines in Vermilion county to a company known as the Kelly Coal Co., which is now operating them, with the exception of mines Nos. 2 and three, which have not been working for three months. This change took place about the first of the year, 1905.

The Dering Coal Co. has purchased and is now operating the four mines formerly owned by the Westville Coal Co., Nos. 1 and 2, and are located in South Westville; No. 3 in Georgetown township and No. 4 in Catlin township, all in Vermilion county.

The Consumers' Coal Co., Chenoa, McLean county, has sold its mine at Chenoa, to the Illinois Coal Mining and Coke Co., of Chicago.

F. W. Davis has sold his mine at Muncie, Vermilion county, to the Atherton Coal Co., which in turn sold it to the Central Coal and Coke Co., of Chicago.

The Manufacturers' Fuel Co. has disposed of its Springside mine at Pana, Christian county, which was not operated last year, to the Smith-Lohr Co., also of Pana.

#### ENFORCEMENT OF THE MINING LAW.

During the year some six or seven miners in Vermilion county have been arrested and fined for violation of that part of the mining law relating to drilling and firing dead holes. While fortunately no serious consequences followed from these violations of the law, several of the men were burned and bruised slightly. These prosecutions have had a salutary effect as no more violations of the law have been observed.

June 8, 1905 through the States Attorney of Shelby county I made application for injunctions to restrain Widick Brothers, Brophy Brothers, W. W. Turney, M. R. Williams, and Hickey & Kingston, from the further operation of their mines, until they provided escapement shafts as required by law. All of these operators had persistently disregarded my instructions as to escapement shafts. The injunctions were granted in all the cases except Hickey and Kingston; the judge deciding that, as this firm did not employ any miners, were not required to have an escapement shaft.

## MINE FIRE.

January 16, 1905. shortly after noon, a fire broke out in mine No. 1 of the Decatur Coal Co., Decatur. Macon county. which resulted in the death of six men as follows: August Yagusch, miner aged 51 years; Charles Lachinski, driver, aged 35 years; Emil Knorr, miner aged 17 years; William Fagan, driver, aged 20 years; William Gollan, miner, aged 50 years; Paul Gollan, miner, aged 17 years; and endangering the lives of seven others, namely, John Dunn, Martin Cullen, Fred Knorr, William Kastner, Thomas Fagan, John Pride and August Rex, all of whom were cut off from escape by the fire; all of the other men working in the mine at the time, about sixty, escaped safely out of the workings.

The fire was discovered in the first north entry in the stable used to feed the mules, the stable being located about 2,100 feet from the bottom of the hoisting shaft. The mule feeder, Mr. Williams, went into that part of the mine about 1:30 o'clock P. M., and finding the fire attempted to extinguish it, but failing to do so, gave the alarm: Thomas Clark, mine manager, came to Williams' assistance and realizing the danger he at once sent runners around the mine to warn the men, and notify them to get out as soon as possible; all of the men escaped excepting those already named. On the first discovery of the fire, mine manager Clark also sent an alarm to the city fire department, which responded promptly, but, owing to the location of the fire so far underground, considerable time was consumed in preparing to get to the fire. A line of hose was connected to the nearest hydrant and carried to the shaft, a distance of seven hundred feet, and six hundred feet down the shaft, then inside twenty-one hundred feet to the fire, a total distance of thirty-four hundred feet. After several breaks in the hose, from the pressure due to the depth of the shaft in addition to the pressure from the pumps, the water was thrown on to the fire, and bringing the flames practically under control about six o'clock P. M. At this time John Dunn, Martin Cullen, Fred Knorr, William Castner and Thomas Fagan, who were among the missing, came out of the first east entry and reported that the body of Lachinski was lying a few feet back in the entry, or about 50 feet from the fire; the body was at once secured and removed to the surface. About three o'clock the next morning John Pride another of the missing men came out at the main east entry and reported that August Rex was in room No. 43 on the first south entry, off of the first east and that he was still alive; a rescuing party went to the place indicated and brought Rex out, who was in a very bad condition, but was finally resuscitated and taken to the hospital. It is supposed that he will fully recover.

The bodies of William Gollan and Emil Knorr were found at the same place where Rex was found. This point is about twenty-seven hundred feet from the fire; search was then made for the other missing men, and the body of August Yagusch was found on the first east entry, about nineteen hundred feet from the fire; the bodies of William Fagan and Paul Gollan were not discovered until about 10:00 o'clock a. m., January 17, for the reason that both men had gotten off of the open road and into the third east entry which had been abandoned; when these bodies were found, they were only about two hundred and fifty feet from where the fire was first located. William Crankshaw was in the mine at this time and assisted in the recovery of these two bodies.

William Fagan and Charles Lachinski were drivers and had been sent to warn the men, as they were both familiar with the mine, they would no doubt have gotten out safely if they had followed the face of the workings, but from the location of their bodies when found, they evidently had tried to get out on the roads on which they hauled coal, the one on the first north entry and the other on the first east were both cut off by the fire, as it was located at the intersection of these two entries.

The fire was undoubtedly caused by sparks from a pipe or a partially consumed cigarette, probably the latter, as the drivers were said to be addicted to the use of cigarettes. The damage to the mine is only trifling, consisting of the burning of the timbers in the stables and six mules which were suffocated by the smoke.

Since this report was submitted the following account, taken from the "Labor World," published at Decatur, in its issue of Oct. 27, 1905, gives in detail the settlements made by the company in consequence of the foregoing deaths.

"All of the cases against the Decatur Coal Company, which resulted from the disaster in the mine last winter, Jan. 16, 1905, have been settled. Five cases were settled for \$13,500. The Fagan case was settled through the administrator appointed by the county court a few days since, \$2,500 being paid the family. The father of Fagan was for many years pit boss in the mine and he is now stricken and helpless and more was given the Fagan family than the other families, where an unmarried man was killed.

Several days ago the case for damages for the death of Emil Knorr was tried. The jury disagreed as to the amount of damages, but it was known that all were in favor of giving damages.

Wednesday the cases of Bertha Lachiniski, as administratrix of the estate of Charles Lachiniski, came up. The trial was started but before it was finished a compromise was reached in this, and in all other cases. In each judgment was entered formerly in court and the jury was instructed to return a verdict which was done in each case. The amounts paid were as follows:

For the death of Charles Lachiniski, \$3,000; for the death of William Gollan, \$3,000; for the death of Paul Gollan, \$2,000; for the death of Emil Knorr, \$2,000; for the death of August Yagusch, \$3,000. In the cases where the men were married, \$3,000, and the families of the unmarried men were given \$2,000. The costs were also paid by the coal company and this made a total of \$13,500, together with the \$2,500 paid the Fagan family, \$16,000 all told."

#### FATAL ACCIDENTS.

July 9, 1904, Anton Daniealus, miner, aged 31 years, married, employed in the Kellyville Coal Co's. mine No. 4, Westville, Vermilion county, was fatally injured by a fall of rock; he was injured about 8 o'clock in the morning and died three hours afterwards. He leaves a widow and one child.

July 23, 1904, Woodford F. Pierce, a miner, aged 50 years, married, employed in the Kellyville Coal Co's. mine No. 4, Westville, Vermilion county, was fatally injured by a fall of rock about 7:30 a. m. He died from the injuries received about 1 o'clock p. m. the same day. He leaves a widow and two children.

August 11, 1904, Louis Rossini, miner, aged 47 years, married, employed in the Westville Coal Co's. mine No. 1, South Westville, Vermilion county, was instantly killed by a fall of rock, which came from a coal slip. The room, in which he was working, is No. 19, off of the 10th northwest entry and was in good condition, otherwise, and was well timbered. He leaves a widow and two children.

August 22, 1904, Anton Yaranska, miner, aged 27 years, single, employed in the Kellyville Coal Co's. Himrod mine, was fatally injured by a fall of rock. The deceased, who had driven his room into another in the opposite direction, was engaged in mining the coal out between the two rooms, when a large piece of rock fell on him with the result as stated. He died about ten hours after the accident.

September 17, 1904, William Bavries, miner, aged 40 years, married, employed in mine No. 3 of the Kellyville Coal Co., Westville, Vermilion county, was instantly killed by a fall of rock. The deceased and his partner had fired two shots in their room about 3 o'clock p. m., the above date; after the shots had exploded, Bavries went back to the face of the room to see the result of the shots, when a large piece of rock fell on him with the result stated.

September 23, 1904, Michael Alunis, miner, aged 26 years, single, employed in the Kellyville Coal Co's. mine No. 3, Westville, Vermilion county, was instantly killed by a fall of rock about 10:30 a. m. of the above date.

October 3, 1904, Anton Portsus, miner, aged 35 years, married, employed in the Kellyville Coal Co's mine No. 2, Kellyville, Vermilion county, was injured by a falling rock from the effects of which he died Feb. 20, 1905. He leaves a widow and one child.

October 8, 1904, Victor Malavale, miner, aged 41 years, married, employed in mine No. 4 of the Kellyville Coal Co., Westville, Vermillion county, was instantly killed in the face of the first south entry, about 12:10 p. m. of the above date. Deceased was engaged in loading a car when a piece of rock about eight feet long and three feet wide, and two feet thick fell on him with the result as stated.

October 13, 1904, Peter Barrista, timberman, aged 35 years, single, employed in the Jones and Adams Co.'s mine, located at Catlin, Vermilion county, was engaged in pulling up a cross-bar and was struck on the head by falling rock, about 9 p. m. the above date; apparently he was not hurt very much as he walked home from the mine, but gradually became worse during the night, and died about 10 o'clock the next morning, the blow on his head produced concussion of the brain.

October 20, 1904, Mike Gereaseverak, driver, aged 31 years, married, employed in the Minonk Coal Co.'s mine, Minonk, Woodford county, was fatally injured by being crushed between loaded pit cars. He died three days afterwards, leaving a widow and three children.

November 15, 1904, William Meyer, miner, aged 51 years, married, employed in the Kelleville Coal Co.'s Pawnee mine, Grape Creek, Vermilion county, was instantly killed by a falling rock. The accident occurred about 7:30 a. m. Deceased was loading coal into the mine car standing about 20 feet back from the face of his room, when the rock, which he knew was in a dangerous condition, fell on him. He leaves a widow and five children.

November 28, 1904, Mike Hartor, miner, aged 55 years, married, employed in the Newbent Coal Co.'s mine, Pana, Christian county, was instantly killed by falling coal. Deceased was engaged in mining or undercutting the coal in his working place. He had undercut the coal to a depth of seven feet, but had failed to put in sufficient sprags as supports, part of the coal fell striking him and breaking his neck. He leaves a widow and two children.

December 3, 1904, Teddy Tannell, miner, aged 48 years, single, employed in the Consolidated Coal Co.'s mine, Fairmount, Vermilion county, was fatally burned by the explosion of powder at 11 a. m. of the above date, from the effects of which he died two days afterwards. Deceased had opened a keg of powder for the purpose of charging his shots, he had some doubts as to whether or not the fuse he was about to use was a good one, to test it he cut off a piece of the fuse and lighted it, throwing it on the ground, the test proved successful as it ignited the keg of powder with the result as stated.

December 4, 1904, John Satigna, miner, aged 33 years, married, employed in the Jones and Adams Co.'s mine, Catlin, Vermilion county, was fatally injured by flying coal from a shot. Deceased was in his room alone at the time of the accident, his partner having gone home after lighting the shot, he attempted to get out of the room, but lost his light and was unable to reach a place of safety. He received his injuries about 1:30 p. m. and died at 8:30 the same day. He leaves a widow and five children.

December 7, 1904, Martin Morawski, miner, aged 38 years, single, employed in the Kelleyville Coal Co.'s Himrod mine, Himrod, Vermilion county, was instantly killed by falling coal from a standing shot, which he was working out, the accident occurred at 11:30 a. m.

December 15, 1904, Joe Yanushitis, miner, aged 22 years, married, employed in the Christian county Coal Co.'s mine, Taylorville, Christian county, was fatally injured by falling coal in room No. 14, first northeast entry. Deceased had fired a shot on the left side of his room, after it had been mined by the machine, the shot failing to throw the coal down, instead of taking it down he began loading his car and while doing so the coal fell, striking him on the forehead fracturing the skull. He died before reaching the surface, leaving a widow and one child.

December, 19. 1904, Raschi Ewangetista, miner, aged 45 years, single, employed in Mine No. 2 of the Kellyville Coal Co., Kellyville, Vermilion county, was instantly killed by flying coal from a shot; just how the accident occurred cannot be clearly shown as the body was not discovered until the night men went to work at 7 p. m., the shot having been fired about 3:15 p. m., his partner supposed deceased had gone out to the bottom on one entry, while he went out on the opposite one.

January 11, 1905. Joseph Battushi, miner, aged 38 years, married, employed in the Pawnee mine of the Kelly Coal Co., located at Grape Creek, Vermilion county, was fatally injured by falling rock in the face of his working room at 2:30 p. m. and died from his injuries about 11:30 the same day. He leaves a widow and two children in the old country.

January 12, 1905. Hugh Morgan, miner, acting as a shot-firer, aged 23 years, single, employed in the mine of the Latham Coal Co., Lincoln, Logan county, was fatally injured by flying coal from a shot and died from his injuries three days afterwards. Deceased with his partner had gone into a room for the purpose of firing two shots: the shot Morgan lighted exploded before he could reach a place of safety, with the result as stated.

The following is the conjugal relations of the six men who lost their lives in the mine fire at Decatur, the details of which have been given:

January 16, 1905. August Yagusch, miner, aged 51 years, leaves a widow and five children. Charles Lachinski, driver, aged 33 years, leaves a widow and two children. Emil Knorr, miner, aged 17 years, single. William Fagan, driver, aged 20 years, single. William Gollan, miner, aged 50 years, leaves a widow and two children. Paul Gollan, a miner, son of William Gollan, aged 17 years, single.

January 21, 1905. Joe Glovitski, miner, aged 30 years, married, employed in the Kelly Coal Co.'s mine at Himrod, was injured by falling rock: he was standing in the neck of a room, where he had taken refuge, while his partner was firing a shot in the room in which they were working. He died in about twenty minutes after being taken from under the rock. He leaves a widow and four children.

January 24, 1905. Mathew Regis, miner, aged 40 years, married, employed in the mine of the Roanoke Coal Mining Co., Roanoke, Woodford county, was instantly killed by falling coal. His head was caught between the coal and a prop. He leaves a widow and two children.

February 2, 1905. Tony Norkis, powderman, aged 30 years, married, employed in mine No. 5 of the Kelly Coal Co., Westville, Vermilion county, was instantly killed by falling rock the evening of this date. Deceased was employed to deliver powder to the different rooms in the mine, the powder being sent into the mine in the evening for the next day's work: while in the performance of this duty, Norkis was struck by a falling rock with the result as stated. He leaves a widow and two children.

February 3, 1905. Charles Sabalunski, miner, aged 38 years, married, employed in mine No. 1 of the Dering Coal Co., South Westville, Vermilion county, was fatally injured by falling rock. He died the next day. Deceased was mining out a standing shot, when the rock which had been loosened by a shot fell on him with the result as stated. He leaves a widow and three children.

February 11, 1905. August Seaburg, miner, aged 39 years, single, employed in mine No. 5 of the Kelly Coal Co., Westville, Vermilion county, was injured by falling rock from the effects of which he died March 8, 1905.

February 11, 1905. Alexander Capron, Miner, aged 30 years, married, employed in the mine of the Assumption Coal & Mining Co., Assumption, Christian county, was instantly killed on the right hand side of his working place by a fall of rock about 3 p. m. This was an accident that could not have been foreseen or guarded against, as there was a slip in the roof which lay outwards from the face of the coal, the mine being worked long wall and as soon as the coal was taken down, the rock, which was about ten feet long, four feet wide, and two and one-half feet thick, fell between the coal face and the building, catching Capron, crushing out his life. He leaves a widow and two children.

March 3, 1905. Fred A. Carter, miner, aged 18 years, single, employed in the mine of the Electric Coal Co., near Danville, Vermilion county, was fatally injured by falling coal, while working off a standing shot, from the effects of which he died three days afterwards.

March 10, 1905. Joseph Friddle, topman, aged 31 years, married, employed in the mine of the Stonington Coal Co., Stonington, Christian county, was instantly killed by falling down the shaft: the accident occurred about 10 p. m., while the men were changing shifts, the shaft being in process of sink-

ing. Deceased was alone at the top of the shaft, and no one saw him fall, but the supposition is that he lost his balance while raising the door which covered the top of the shaft, falling to the bottom, a distance of 370 feet. He leaves a widow and three children.

March 21, 1905, George Carrington, miner, aged 34 years, married, employed in mine No. 5 of the Kelly Coal Co., Westville, Vermilion county, was injured by falling rock while working down loose coal from a standing shot, from the effects of which he died April 13, 1905. He leaves a widow and one child.

March 27, 1905, Peter Waitkuis, miner, aged 34 years, single, employed in mine No. 2 of the Kelly Coal Co., at Kellyville, Vermilion county, was fatally injured by falling rock while working down a standing shot. He died from the effects of the accident the next day.

May 13, 1905, Eli Dinguel, miner, aged 24 years, single, in the employ of the Roanoke Coal & Mining Co., Roanoke, Woodford county, was instantly killed by falling rock and timber about 8:00 p. m.

May 19, 1905, Garrett Mann, Jr., driver, aged 24 years, single, in the employ of the Latham Coal Co., Lincoln, Logan county, was fatally injured by being crushed between loaded pit cars. The accident occurred about 7:30 a. m.: he died about two hours afterwards.

May 19, 1905, Jonas Stankevics, miner, aged 45 years, single, employed by the Kelly Coal Co. at its Pawnee mine, located on Grape Creek, Vermilion county, was fatally injured by falling rock about 11:30 a. m., and died before reaching the surface.

May 25, 1905, Leonard Stone, miner, aged 36 years, married, employed in mine No. 2 of the Kelly Coal Co., Kellyville, Vermilion county, was instantly killed by flying coal from a shot. Deceased had gone back in his room to light a fuse, which he had previously attempted to light, but thought he had failed to do so, when he got back into the face of his room and opposite the shot it exploded with the result as stated. He leaves a widow and four children. Deceased came to this country from England about nine months before his death.

June 28, 1905, Thomas McGray, driver, aged 24 years, married, employed in the Moweaqua Coal Mining & Manufacturing Co.'s mine, Moweaqua, Shelby county, was instantly killed by being crushed between a mule and loaded pit cars.

In concluding this report I wish to acknowledge the ready and serviceable assistance of the several county mine inspectors of this district.

Respectfully submitted,

THOMAS WEEKS,

*State Inspector of Mines, Fourth District, Bloomington, Ill.*

## FIFTH INSPECTION DISTRICT—1905.

### TWENTY-SECOND ANNUAL REPORT.

Counties—Brown, Calhoun, Green, Jersey, Macoupin, Montgomery, Morgan, Sangamon, Scott.

WALTON RUTLEDGE, *Inspector*, Alton.

HON. DAVID ROSS,

*Secretary, State Bureau of Labor Statistics, Springfield, Ill.*

SIR—In compliance with the statute of the State defining the duties of the State inspectors of coal mines, I herewith submit the twenty-second annual coal report of the coal mines in the fifth inspection district for the year ended June 30, 1905.

A tabular statement is herewith given of the statistics in each county, showing the number of mines operated during the year, both shipping and local; the new and abandoned mines; the depth of coal below the surface with the geological number and thickness of the various coal seams; the number of miners and other employes working in the mines and on the surface; the total tonnage of all grades of coal; the average value of coal at the mines, and the aggregate value of the total product in the district, with the casualties in and around the mines, both fatal and non-fatal.

The following summary is given as a recapitulation of the principal facts found in the schedules of the various counties:

Number of mines .....	112
Number of new mines .....	16
Number of abandoned mines .....	6
Number of shipping mines .....	56
Number of local mines .....	56
Total output of tons (2,000) .....	7,435,952
Tons of mine run coal .....	1,717,325
Tons of lump coal .....	3,566,968
Tons of egg coal .....	182,132
Tons of nut coal .....	278,159
Tons of screening (pea) coal .....	1,554,850
Tons of duff coal .....	136,518
Tons loaded on cars for shipment .....	6,527,037
Tons supplied to locomotives .....	192,815
Tons sold to local trade .....	411,135
Tons consumed and wasted at the mines .....	304,965
Tons mined by hand .....	4,561,019
Tons mined by machines .....	2,874,933
Average number of days of operation, shipping mines .....	186
Number of mines using machines .....	15
Number of machines in use .....	213
Number of miners .....	6,646
Number of other employes underground .....	1,957
Number of boys employed underground .....	326
Number of other employes on the surface .....	940
Total number of employes .....	9,869
Average value per ton of lump coal at the mine .....	\$1.198
Average value of mine run at the mine, per ton .....	\$0.973
Average value per ton of egg coal at the mine .....	\$1.184

Average value per ton of nut coal at the mine.....	\$0.824
Average value per ton of screenings at the mine .....	\$0.438
Average value of duff coal at the mine.....	\$1.237
Total valuation of product at the mine.....	\$8,996,345
Number of machines using compressed air .....	173
Number of machines using electricity.....	40
Number of fatal accidents .....	23
Number of non-fatal accidents.....	81
Number of tons mined to each fatal accident .....	323,302
Number of persons employed to each fatal accident .....	442
Ratio of persons killed to each 1,000 persons employed.....	2.3
Number of tons mined to each non-fatal accident.....	91,803
Number of kegs of powder used in blasting coal .....	210,635
Number of kegs for other purposes.....	494
Dynamite used in sinking (pounds).....	5,693

Coal production by counties in the fifth district, with the increase or decrease in each for the years ended June 30, 1904, and June 30, 1905, is shown in the following table:

COUNTIES.	TOTAL OUTPUT IN TONS.		Increase.	Decrease.
	1904.	1905.		
Brown .....	1,583	1,606	23	.....
Calhoun.....	3,110	2,880	.....	230
Greene .....	10,904	14,659	3,775	.....
Jersey.....	3,405	3,141	.....	264
Macoupin.....	2,221,474	2,530,840	309,366	.....
Montgomery .....	494,501	468,198	.....	26,303
Morgan .....	4,300	4,702	402	.....
Sangamon .....	4,516,358	4,395,050	.....	121,308
Scott .....	24,652	14,876	.....	9,776
Totals .....	7,280,287	7,435,952	313,546	157,881

Total net increase, 155,665 tons.

The district shows a net increase of 155,665 tons, which is due to the two new mines of the Superior Coal Co., located at Gillespie, Macoupin county, giving the county an increase of 309,366 tons over last year. Sangamon county shows a decrease of 121,308 tons. Montgomery county shows a loss of 26,303 tons; this is largely due to dull business during the year. Scott county shows a falling off of 9,776 tons; this was due to the destruction by fire of the top works of the Wm. H. Bates mine at Winchester.

NEW MINES,

The Consolidated Coal Co. of St. Louis. Mo., has put in operation during the year, a new mine, one and a half miles west of Mount Olive, in Macoupin county; a spur from the Wabash railroad, a distance of 13,200 feet runs to the mine; this mine will be known as No. 15. Coal was reached in both hoisting and air shaft Nov. 2, 1904. The size of both shafts is 8 feet 10 inches by 15 feet 6 inches, and timbered with eight inch curbing. The depth to the top of the coal is 362 feet. The coal seam is seven feet eight inches thick. Entries are driven from the bottom of the main shaft a distance of 400 feet; both shafts are connected and a substantial stairway is constructed in the air shaft for escapement. An eight foot Murphy fan has been installed to furnish ventilation and a wooden tower is being constructed with self dumping cages and shaker screens. Four boilers have been installed, each 72 inches in diameter by 18 feet long, containing 70 four inch tubes, each boiler is rated at 175-horse power. A straight Sullivan air compressor is installed to furnish power for the coal cutting machines; punching machines are to be used. The hoisting engines are 24x36 inches. The engine room, compressor room, tipple

and boiler house are constructed with corrugated iron. A 30,000-gallon water tank, and a coal washer having a capacity of 100 tons per hour have been installed.

A new mine has been put in operation during the year one mile south of the city of Auburn, Sangamon county, on the line of the C. & A. railroad, which will be known as the Black Diamond Coal Co., and owned by Robert Solomon & Sons. The main shaft is 8 feet 6 inches by 14 feet; the air shaft is 8 feet 6 inches by 15 feet 10 inches; a substantial stairway is in the air shaft for escapement; each shaft is 293 feet deep. For ventilation, a 16-foot fan has been erected; the hoisting engines are 24x36 inches, with self-dumping cages and shaking screens. The steam power is generated by four boilers—two plain cylinder and two tubular boilers; the engine, boiler and fan houses are of brick, and said to be fire proof; the tower and tippie houses are built of wood; an electric machine has been installed for cutting the coal by cutters operated by a 19x18 in. engine geared direct to a 150 K. W. generator. The mine is now being opened out with a view of having a large output the coming year.

A new mine has been put in operation during the year at Cora, Sangamon county on the line of the C. P. & St. L. R. R., and will be known as the Cora Coal Co. The main shaft is 7x14 feet; the air shaft is not yet completed; good machinery and boiler power has been put in, also dump cages and shaking screens.

A new mine has been put in operation during the year by the Springfield Colliery Co., located at Springfield, Sangamon county. Both the main and escape shafts have been sunk to the coal; the hoisting shaft is 16 feet 6 inches by 10 feet; the air and escapement shaft is 14 feet 6 inches by 7 feet; the escapement chamber is 5x7 feet, with a suitable stairway. The hoisting engine is 24x36 inches; three Erie boilers have been set up, each one is 150 horse power.

The mine is located on the C. & A. R. R., and everything in the way of equipment will be up to date when the mine is completed. The officers of the company are H. C. Adams, president; C. F. Evans, vice president; D. W. Heath, secretary and treasurer. The main office of the company is located at 975 Old Colony building, Chicago.

#### IMPROVEMENTS IN MINES.

At mine No. 6, Staunton, Macoupin county, owned by the Consolidated Coal Co., there has been installed one John O'Brien boiler, 6x18 feet with 70 four-inch tubes rated at 157 horse power. Pipes have been placed for pneumatic signals, but are not yet in operation on account of the air chambers not being received.

At mine No. 7, Staunton, Macoupin county, owned by the Consolidated Coal Co., there has been constructed a new wooden tippie with self-dumping cages and shaker screens. The 8-foot Murphy fan has been removed, and a 22-foot Duncan fan put in its place. Two John O'Brien boilers, 6 by 18 feet, with 70 4-inch tubes have been installed. The main haulage ways have been relaid with 30-pound steel rails, taking the place of the 12-pound rails; this improvement is made with a view of putting in electric haulage. The foundation of the hoisting engine has been renewed; an iron hoisting drum has been put in, replacing one made of wood. Pipes have been placed for pneumatic signals, and will be in operation in a short time.

At mine No. 8, located at Mt. Olive, Macoupin county, owned by the Consolidated Coal Co., a new wooden tippie has been constructed; self-dumping cages and shaker screens have also been introduced. Two John O'Brien boilers, 72 inches by 18 feet have been installed, each boiler having 70 four-inch tubes and rated at 157 horse-power. There has also been installed one 250 K. W. generator of the general electric type. The main east and west entries, also the 14th south on the east side have been laid with 30-pound steel rails. Two 10-ton general electric mine motors have also been put in operation; pneumatic signals have been put in and are now in operation.

At mine No. 10, also located at Mt. Olive, Macoupin county, owned by the Consolidated Coal Co., two John O'Brien boilers have been installed, each 72 inches by 18 feet, with 70 four-inch tubes; they are rated at 157 horse-power; an overcast has been constructed in the west entry into the 6th, 11th and 15th north entries.

The Consolidated Coal Co., at its mine No. 14, Staunton, Macoupin county, has made extensive improvements. A washery has been constructed, the capacity being 100 tons per hour; a Smith gravity box-car loader has been introduced; one John O'Brien boiler has been put in, 72 inches by 18 feet, with 70 four-inch tubes, rated at 157 horse-power. A 22-foot Duncan fan has been constructed; a 100 K. W. generator has been installed for the purpose of lighting the washery, pumping, etc. A stairway in the air shaft has been built to be used as an escapement.

The Woodside Coal Co., Woodside, Sangamon county, has sunk a new shaft one-half mile east of the main shaft and at the head of the working entries, to be used as an air shaft and escapement.

The West End Coal Co., Springfield, Sangamon county, has installed electric haulage.

The Williamsville Coal Co., Selbytown, Sangamon county, has rebuilt the tower at its plant, retimbered both shafts, and put in a new stairway in the escapement shaft; it has also put in dump cages, and shaking screens and built a number of new dwelling houses.

#### CHANGES OF CORPORATE NAMES.

The Illinois Collieries Co., Chicago, (Railway Exchange Bldg.) has bought the Chicago-Virden Coal Co.'s mines Nos. 1, 2 and 3, also the Virden Coal Co.'s shaft, all at Virden, Macoupin county. This company has also bought the Girard Coal Co.'s shaft at Girard, the Jones and Adams Coal Co.'s shaft at Springfield, and the Litchfield Mining and Power Co.'s shaft at Litchfield. These several mines will be known as No. 1 at North Virden, No. 2 at Auburn, No. 3 at Chatam, No. 4 at South Virden, No. 5 at Girard, No. 7 at Litchfield, and No. 8 at Springfield.

J. P. Gorden of Salisbury, Sangamon county, has sold his shaft to W. U. Whitehurst.

#### PROSPECTIVE MINES.

The Shoal Creek Coal Company, main office 734 Rookery building, Chicago, is sinking a new mine at Donnellson, Montgomery county; the shaft is now down 194 feet and coal is expected to be reached at 375 feet; the air shaft is being sunk at the same time as the hoisting shaft. The boiler and engine houses will have brick walls and iron roof trusses; it will be a machine mine, punching machines will be used; everything around the mine will be put in first class condition. Steel tower, dump cages and shaking screens are to be used, and it is said that the shaft will have a capacity of 2,000 tons in eight hours, when properly opened out.

The Clover Leaf Coal Co., Coffeen, Montgomery county, is sinking a new mine at that place on the T. St. L. & W. R. R., one mile west of their present shaft; this mine will be known as No. 2.

The Superior Coal Co., Gillespie, Macoupin county, is sinking a new shaft designated as No. 3, at a point three miles southeast of Gillespie, on the line of its own road, the Macoupin County Railroad. The company expects to reach the coal (Mount Olive seam) about September 1st next. The depth of the shaft will be 335 feet; the size of the main shaft is 9 by 17 feet; the air shaft is 9 by 15 feet.

The equipment will be a hoisting engine 24 by 36 inches, with 7-foot straight drum; a brick boiler and engine house, with steel trusses and slate roof; the machine power house is 42 by 89 feet and built of brick with steel trusses and slate roof; the blacksmith and repair shop is 26 by 60 feet; the building the same as the power house. Two air compressors will be installed, capacity 1,840 cubic feet per minute; the engine to be placed will be of 1,200 horse power, with two tubular boilers 72 inches in diameter by 18 feet long, seventy 4-inch tubes in each boiler. The coal will be mined by machines, operated by compressed air; self-dumping cages and 2½-ton mine cars will be used. A brick stack 125 feet in height has been built, the base is 13 feet 4 inches square and 8 feet 6 inches at the top, the internal diameter is 6 feet and is lined with fire brick. Two 70-foot track scales will be installed.

The company now has twenty-five dwelling houses and a hotel erected, and the Hillsboro Building and Loan Company is building twenty-five more houses. The location of the shaft is very good, as little grading for yard work will be required. The houses for the men and families are located where there is a very fine view of the surrounding country and a good location for a town.

The Peabody Mining Co. has secured a large tract of coal land near Nokomis, Montgomery county, on the lines of the C. C. C. & St. L. and Frisco roads, and is now sinking a shaft; the company expects to reach the coal seam eight and one-half feet thick at 650 feet in depth from the surface.

The Trutter Coal Co., Springfield, Sangamon county, is sinking a new shaft on the line of the B. & O. R. R., four miles west of Springfield. The main shaft is now down to the coal, 174 feet, the coal seam is about six feet thick.

The Mechanicsburg Coal Co., Mechanicsburg, Sangamon county, is sinking a new shaft one and one-half miles from that town on the line of the Illinois Traction Co.'s road.

Several new local mines have been opened out and others have been abandoned during the year.

#### FIRES AT MINES.

Dec. 10, 1904, the tower, locomotive chutes and outbuildings of the Woodside Coal Co., Springfield, were destroyed by fire, the origin of the fire is supposed to have been caused by sparks from passing locomotives. Twenty-eight mules were suffocated. The fire occurred at night; some twelve or fourteen men were working in the mine, but got out safely by the escapeway. Every thing has been rebuilt and the mine commenced work again Jan. 18, 1905.

Dec. 19, 1904, the top works at the Wm. H. Bates mine at Winchester, Scott county, were destroyed by fire. Engine, boiler house, blacksmith shop, wagon scale, shed and locomotive chutes were all destroyed. The fan-house was untouched; all of the mules were saved, being hoisted out of the escape shaft by the men; fortunately there were no men at work in the mine when the fire broke out. This fire was also said to have originated from sparks from passing locomotives. All of the buildings destroyed have been rebuilt and the mine is now at work.

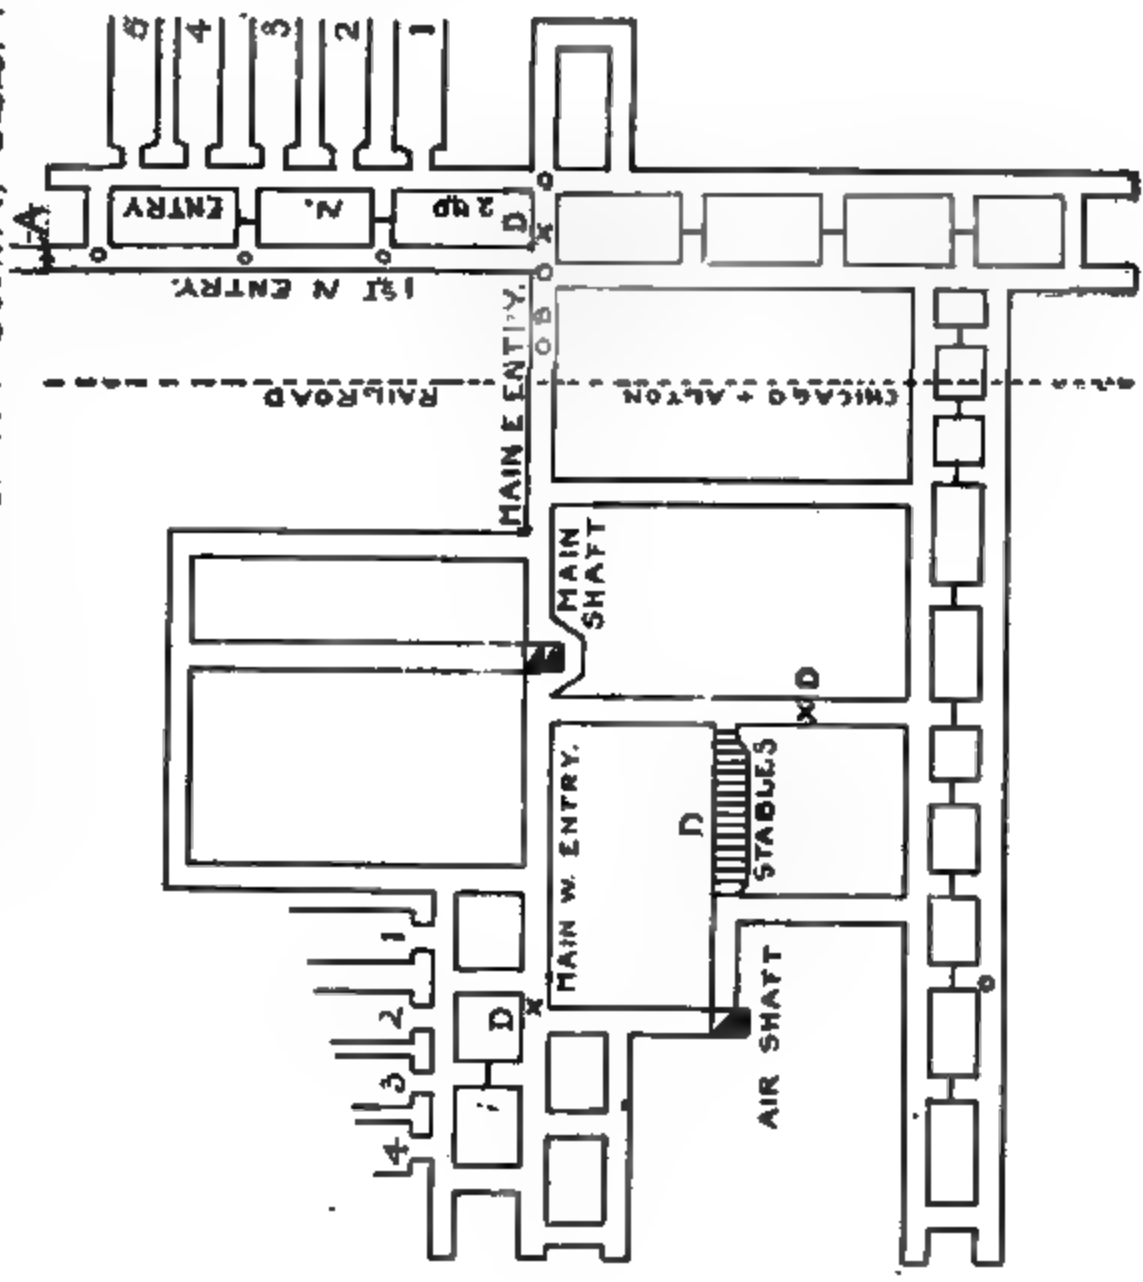

#### EXPLOSION IN MINES.

November 11, 1904, at 1:15 a. m., an explosion occurred in the Peabody Mining Co.'s mine at Sherman, Sangamon county, because of which James McGee and Anton Maruscha lost their lives. I visited the mine the next day, November 12; in company with James Smith, county inspector of Sangamon county. The following is a detailed report of our inspection, accompanied by a map showing where the explosion took place, the location of the various exploded powder kegs which had been ignited by the blast, also other points.

The explosion occurred in the first north entry off the main east entry on the east side of the mine; in this latter entry Anton Maruscha, one of the men killed, was working. The entry had been worked in a distance of 311 feet from the main east entry, the face of the entry was 70 feet from the last open cross-cut, and work had been commenced to drive the next cross-cut through at 60 feet.

Three shots had been prepared and fired in the face; a top hole, and a bottom hole directly underneath, also a top hole at right angles to the other holes in the cross-cut; the two holes in the entry had been drilled in a line with the left rib of the entry, and both had been placed in the solid, with no chance whatever to bring down the coal; there was also a roll in the roof, running diagonally across the face of the entry for four feet back from the face, that still further prevented the shots from dislodging the coal. The bottom hole it was found, had blown off part of the heel of the shot, but left 11 inches of the remaining hole; the top hole had blown its tamping, also about six inches was blown off the mouth of the hole, and twenty-seven in remained dead. The hole in the

NEW 12166

crosscut was 15 5 feet from the two holes on the left rib in the entry, and was a stiff hole blowing the heel but leaving 10.5 inches of the remaining hole dead.

At the last open crosscut, seventy feet from the face. pieces of cut fuse were found, and also small portion of the lid of a powder box with the staple and padlock attached; the balance of this box could not be identified in the wreckage lying around. At, or opposite, the mouth of the first north entry, about twelve feet from where the body of Maruscha was found. a powder keg was found that had been exploded; also at the mouth of the second north entry on the main east entry. twenty feet from the first north entry on the main east entry, another powder keg was found, also exploded.

The body of Maruscha was found against the south side of the main east entry and about seventeen feet diagonally from the mouth of first north entry, and about 328 feet from the face of the first north entry, and about 275 feet from the hoisting shaft. In the back entry, or second north entry, the face of the entry was fifty-five feet from the open cross-cut; in this entry there are five rooms turned: room 5 is turned twenty-three feet outside of the last open cross cut. and is worked in eighteen feet from the entry. One keg full of powder, and one partly full were found in this entry; the full keg was in the room and the other one on the entry.

The body of James McGee was found in what is known as the west escapement entry, on the west side of the mine, at a distance of 575 feet from the hoisting shaft, also 1,178 feet from the face of the first north entry and 275 feet from the air shaft.

The explosion was of considerable violence, on the east side of the mine the stoppings were blown out and large timbers on the main east entry were knocked down, letting down large masses of rock and strewing debris in all directions, the south cage was jammed into a twisted mass of iron. At the bottom and in the west escapement entry, where McGee was found, the pit cars were piled together; the stairs were blown down in the escape shaft, and the fan house wrecked, as was also a part of the steel sheeting covering the tippie at the hoisting shaft. The stable was set on fire, owing to hay catching fire from the flames and five mules were burned to death. The bodies of the two men were terribly burned, and the head of Anton Maruscha was badly mangled by being crushed against the rib of the entry.

#### CAUSE OF EXPLOSION.

There is no doubt but that these three shots were all fired at the same time, and by fuse, as pieces of fuse had been found at the open cross cut where the powder box had been found. The holes had been very badly placed, and consequently the whole force of the powder was expanded on the atmosphere, producing what is commonly known as windy shots: conditions were further aggravated by one of the shots being at right angles to the other two, the carbonic oxide gases given off by these shots being ignited from the flame of the shots; the flames passing out to the cross-cuts. At the first open cross cut from the face, where the shots were fired, Maruscha's box was standing, in which he kept his powder; and, as this box was blown to pieces, it must have contained a quantity of powder, which exploding, intensified the force of the blast; also the flames following the explosion, set off other powder. still further intensifying the force of the blast, as four kegs were found that unmistakably had been exploded; thus making more intense the force of the explosion, this, together with the force of the blast going against the incoming air. caused it to extend to the west side of the mine, following the path of the least resistance to the escapement or air-shaft, where, at that point, it would have the effect of a huge piston, driving the air up the tube-like air shaft with an enormous pressure and velocity, stripping all obstructions in its path. The flames following the explosion, also passed to the west side of the mine. and going through the stable, setting fire to the hay, and other combustible matter, and burning fatally the five mules. The flames also passed up the west escape entry to where McGee was found, as his body was terribly burned; here also was found a keg of powder that had been exploded. *I do not believe that dust was a factor in this explosion. as I could not find any traces of charred coal dust.*

## FATAL ACCIDENTS.

The following is a detailed statement of the fatal accidents that have taken place in the fifth inspection district during the year ended June 30, 1905:

Aug. 5, 1904, William Sloan, miner, aged 19 years, single, was killed in the Wilmington & Springfield Coal Co.'s mine, Springfield, Sangamon county, by suffocation. He went back on shots previously fired and was overcome by the smoke and gases from the shots.

Aug. 16, 1904, Chas. Gedudis, miner, aged 40 years, married, was killed by falling slate at the working face in the Springfield Coal Mining Co.'s No. 4 mine, Springfield, Sangamon county. He leaves a widow and three children.

Aug. 27, 1904, Thomas Younger, miner, aged 40 years, married, was killed by falling slate at the working face in the Trutter Coal Co.'s mine, Pleasant Plains, Sangamon county. He leaves a widow and two children.

Aug. 30, 1904, F. Creith, miner, aged 22 years, single, was killed by falling top coal at the working face in the Royal Colliery Co.'s mine, Virden, Macoupin county.

Sept. 21, 1904, Chas. Molitris, miner, aged 29 years, married, was killed by falling top coal at the working face in the Victor Coal Co.'s mine, Pawnee, Sangamon county. He leaves a widow and one child.

Sept. 29, 1904, P. Caulfield, roadman, aged 29 years, single, was injured by being caught between mine cars at the Springfield Coal Mining Co.'s No. 4 mine, Springfield, Sangamon county. He died Oct. 5, 1904.

Oct. 9, 1904, P. Caspere, miner, aged 27 years, single, was killed by falling slate at the working face in the mine of the Barclay Coal Mining Co., Barclay, Sangamon county.

Oct. 22, 1904, Michael Delmo, miner, aged 35 years, married, was killed by a premature blast in the Royal Colliery Co.'s mine, Virden, Macoupin county. He leaves a widow and three children.

Oct. 22, 1904, H. H. Berg, driver, aged 24 years, single, was killed in the the Superior Coal Co.'s mine No. 1, Gillespie, Macoupin county, by being caught between mine cars.

Oct. 31, 1904, Carl E. Hedrick, timberman, aged 19 years, single, was killed by falling slate while timbering on the hauling road in the Woodside Coal Co.'s mine, Springfield, Sangamon county.

Nov. 11, 1904, Anton Maruscha, miner, aged 40 years, single, was killed by an explosion caused by badly placed shots at the Peabody Mining Co.'s mine, Sherman, Sangamon county.

Nov. 11, 1904, James McGee, miner, aged 32 years, married, was killed by an explosion at the Peabody Mining Co.'s mine, Sherman, Sangamon county. The explosion was caused by badly placed shots. He leaves a widow.

Nov. 21, 1904, Ed. J. Mooney, machine helper, aged 25 years, single, was killed by falling coal at the working face in the Madison Coal Co.'s mine No. 6, Divernon, Sangamon county.

Nov. 25, 1904, Alvin Maxey, miner, aged 48 years, married, was killed by flying coal from a shot in the Springfield Coöperative Coal Co.'s mine, Springfield, Sangamon county. He leaves a widow.

Dec. 20, 1904, Michael Nehering, miner, aged 43 years, single, was injured by falling slate while working in the Island Grove Coal Co.'s mine, Old Berlin, Sangamon county. He died two days after the accident.

Dec. 30, 1904, Neverest Rhiebold, miner, aged 39 years, married, was killed by coal flying from shot in the Springfield Coal Mining Co.'s No. 3 mine, Springfield, Sangamon county. He leaves a widow and four children.

Jan. 25, 1905, Peter Greff, miner, aged 30 years, married, was injured by falling over a prop in an old and abandoned room in the Illinois Collieries Co.'s mine No. 5, Girard, Macoupin county. He died the next day. He leaves a widow and one child.

Feb. 25, 1905, Edward Acres, carpenter, aged 34 years, married, was killed by falling down the shaft of the Illinois Collieries Co.'s No. 1 mine, Virden, Macoupin county. A mine car had been thrown from the dump cage into the weigh pan; a chain was attached to the car to draw it back to the cage; Acres was standing on top of the cage, when the chain broke, causing the cage to rebound, throwing him off and down the shaft. He leaves a widow and two children.

March 24, 1905. Frank Vota, miner, aged 26 years, single, was killed by falling top coal at the working face in the Montgomery Coal Co.'s mine at Paisley, Montgomery company.

April 7, 1905. John A. Forseyth, aged 26 years, married, was injured by an explosion of powder in the Superior Coal Co.'s No. 1 mine at Gillespie, Macoupin county. While in the act of charging a shot, a spark from his own or his partner's lamp fell into the powder can, causing the explosion. He died the next day. Inhaling the fumes of the powder caused his death. He leaves a widow and three children.

April 16, 1905. F. B. Lowery, timberman, aged 33 years, married, was killed by a fall of slate in the Jefferson Coal Co.'s mine, Springfield, Sangamon county. He leaves a widow and two children.

April 26, 1905. John Rink, timberman, aged 45 years, single, was killed by a fall of slate in the Victor Coal Co.'s mine at Pawnee, Sangamon county.

June 8, 1905, James F. Homer, miner, aged 24 years, single, was killed by falling slate in the Madison Coal Co.'s No. 5 mine at Mount Olive, Macoupin county.

Following will be found the regular tables for each county, also the tables for fatal and non-fatal accidents. Respectfully submitted.

## SIXTH INSPECTION DISTRICT—1905.

### TENTH ANNUAL REPORT.

(The Sixth Inspection District was formed in 1895, the first annual report was for the year ended June 30, 1896.)

Counties—Bond, Clinton, Madison, Marion, St. Clair.

JOHN DUNLOP, *Inspector, Centralia.*

HON. DAVID ROSS,

*Secretary, State Bureau of Labor Statistics, Springfield, Ill.*

SIR—In compliance with an act of the General Assembly of this State, defining the duties of the State inspectors of coal mines, and requiring annual reports, I herewith submit the tenth annual report of the sixth inspection district, for the year ended June 30, 1905. The counties of the district producing coal are Bond, Clinton, Madison, Marion and St. Clair.

This report gives tabulated statements by counties of the number of mines operated, with the names of the companies or firms operating the same; the total output of all grades of coal, and the disposition of the same; the aggregate value of the output at the mine; the number of miners and other employés; the tonnage mined by hand, also by cutting machines; the number of machines in use and how operated; the number of kegs of powder used in blasting coal; the number of mines using electric motors for hauling coal; the number of fatal and non-fatal accidents, and the number of widows and children left dependent.

The following is a summary taken from the statistical tables for the fiscal year:

Number of counties in which coal is produced.....	5
Total number of mines.....	127
Number of new mines, shipping.....	12
Number of mines abandoned, shipping.....	4
Number of shipping mines.....	92
Number of local mines.....	35
Number of new mines, local.....	2
Total tonnage of shipping mines.....	8,392,443
Total tonnage of local mines.....	114,486
Total tonnage of all mines.....	8,506,929
Tons loaded on cars for shipping.....	7,505,551
Tons supplied to locomotives.....	291,423
Tons sold to local trade.....	219,696
Tons consumed and wasted at the mine.....	375,773
Aggregate value of total product.....	\$7,164,435
Number of miners in all mines.....	7,157
Number of other employés, including boys underground.....	2,363
Number of employés above ground.....	1,116
Total number of persons employed.....	10,636
Average number of days of active operation, shipping mines.....	187
Total number of mining machines in use.....	393
Total tons cut by machines.....	3,775,953

Total tons produced by hand in all mines.....	4,730,976
Number of fatal accidents.....	25
Number of non-fatal accidents, losing 30 days or more.....	59
Number of wives made widows.....	19
Number of children left fatherless.....	59
Number of tons produced for each fatal accident, shipping mines.....	340,277
Number of tons produced for each non-fatal accident.....	144,115
Number of persons employed to each fatal accident.....	425
Number of persons employed to each non-fatal accident.....	180
Ratio of fatal accidents to 1,000 persons employed.....	2.4

The following table shows the coal production by counties, with increase and decrease in each for the year ended June 30, 1904, and June 30, 1905:

COUNTIES.	TOTAL OUTPUT OF ALL GRADES OF COAL, IN TONS.		Increase.	Decrease.
	1904	1905		
St. Clair.....	3,418,469	3,398,032	.....	20,437
Madison .....	3,030,892	2,987,906	.....	42,986
Marion .....	1,083,734	1,086,350	2,616	.....
Clinton .....	925,515	904,826	.....	20,689
Bond .....	176,116	129,815	.....	46,301
Totals .....	8,634,726	8,506,929	2,616	130,313

Total net decrease, 127,697 tons.

During the past year twelve new mines of the shipping class have been opened; most of them are equipped to handle an output of from 1,000 to 2,500 tons per day. Judging from the large decrease in the output, the coal trade does not seem to justify the opening up of these plants. In looking over the report for 1904, and comparing it with the present year, it shows that the earnings of the miner for the year are much less; this is brought about by the increase in the number of new mines, also in bringing in of more miners, which has had a tendency to reduce the number of active working days. There has been a decrease from last year of 21 working days, the number of miners has increased 525, and the total increase of all employes is 971.

The number of fatal accidents for the year shows a decided decrease, being 10 less than reported for 1904. The ratio per thousand of the number of persons killed, shows for 1903, 3.83; for 1904, 3.62, and this year 2.35, a decrease of 1.27 from last year.

#### NEW MINES.

The following description is given of the equipment of the mine of the New Staunton Coal Co., located at Livingston, Madison county: The hoisting shaft is 8½x17 feet, divided into three compartments, two for hoisting and the other for pipes and electric cable; the depth is 287 feet to the top of the coal; the size of the timbers used for timbering the shaft is 8x12 inches. The air shaft is 15x9 feet, the air chamber 10x9, and the escapement 5x9; the timbering is the same as in the main shaft. The hoisting arrangement consists of an engine, two-cylinder, 24x36 inches, furnished by the Danville Foundry & Machine Co., Danville, Ill.; the diameter of the drum is 8 feet; the ropes are 1½ inches crucible steel, furnished by Leschen & Sons Rope Co., of St. Louis, Mo. The cages are of the Bonds patent, self-dumping, made by the Ellison Machinery & Foundry Co., of St. Louis, Mo.; the sheave wheels are 8 feet in diameter. The electric equipment consists of a McEwen engine, 16x16 inches, driving a 100 K. W. Goodman generator. There are four Brownell boilers, 6x18 feet, with 72 4-inch flues, two McDowen pumps, 7x5x10 inches, and one Cochran heater, 2,000 horse power. The tibble is 75 feet in height, from the ground to the sheave wheel, and is built of wood. The

shaker screens are constructed so as to furnish four grades of coal; each track has an 80-foot scale; these scales are placed in a concrete sealed pit, and were furnished by Moser, of St. Louis. All of the coal is dumped into a hopper and weighed in the tippie by automatic scales, also furnished by Moser. The fan providing ventilation in the mine was furnished by the Danville Foundry & Machine Company. It is 20 feet in diameter and 6 feet wide, is driven by direct connection to an engine, the cylinders of which are 12x18 inches. The buildings are all constructed of fire-proof material, excepting the tippie; the engine rooms are built of brick, the boiler rooms, shop, fan house and oil house are constructed of corrugated sheet iron; the powder house is also built of brick. The machine shop, which is very essential at all large mines, is equipped with all the latest machinery, such as lathes, drill press, and pipe machines, and such other machinery necessary for carrying on successfully the work at a large mine.

The Mt. Olive & Staunton Coal Company's mine No. 2, Staunton, Madison county, is described as follows: The hoisting and escapement shafts are both the same size, each being seventeen feet, two inches by eight feet, two inches; the hoisting arrangement consists of an engine having two cylinders 24x36 inches, which were furnished by the Litchfield Machine & Foundry Company, Litchfield, Ill. The drum is eight feet in diameter; the ropes are one and one-fourth inches in diameter; the cages are self-dumping, made by the Duncan Foundry Company, Alton, Illinois.

The electric equipment consists of a 150-K. W. generator, driven and directly connected to a McEwen engine; there are four boilers of the O'Brien type, each 150-horse power fitted with the necessary pumps and heater. The tippie is constructed of steel, having concrete piers for the foundation, it is 65 feet high from the ground to the top of the sheave wheel; it is equipped with a hopper and shaker screens, the screens making four grades of coal, three Howe scales are so placed that all coal is weighed before leaving the mine. The fan is 22 feet in diameter, made by the Duncan Foundry Company, Alton, Ill. The buildings are all built of brick, engine and boiler rooms, blacksmith, carpenter and machine shops, fan house and office; the company has built fifty dwelling houses and a general store.

The new mine of the St. Louis & O'Fallen Coal Company, East St. Louis, St. Clair county, is a remarkably well equipped mine. The main shaft is 9x17 feet in the clear; the depth to the coal is 197 feet; the air shaft is 7x15 feet; the tippie is built of steel. The hoisting engine is 24x26 inches and was made by the Litchfield Machine & Foundry Company, Litchfield, Ill.; the cable used is one and one-half inches in diameter. Self-dumping cages are installed, and mine cars with a capacity of three and one-half tons are used, all made by the Duncan Foundry Company, Alton, Ill. Two engines are directly connected with the shaker screens, with four tracks, thus enabling the loading of four cars at the same time; there are six boilers built in two batteries, with a capacity of 850-horse power. The company has also installed two stage Sullivan air compressors, each having a capacity to operate thirty mining machines.

The foregoing are the largest mines that have been opened and equipped in this district during the year; each one is built with a capacity to handle 2,000 to 3,000 tons of coal per day. My purpose in giving in detail the description of these plants is to impart a general idea of the equipment necessary for coal mines intended for a like capacity. All of the new mines are reported for the year excepting a new mine which has been sunk by the Consolidated Coal Company, three miles south of Collinsville in St. Clair county, to be known as No. 17. It is the intention of the company to equip this mine to handle a large product, and in addition a large washery will be built.

#### CHANGES IN THE NAMES OF COMPANIES.

A great many changes in the names of companies have taken place during the year:

The Dutch Hollow Coal Company, Belleville, has changed its name to that of the Avery Coal & Mining Company; the O'Fallon Coal & Mining Company, O'Fallon, has been purchased by the Silver Creek Coal Company, a new corporation; the Skellet mine, formerly owned by the Skellet Coal Company,

Belleville, is now owned and operated by the Fullerton Coal Company; the Valley Coal & Mining Company, East St. Louis, is now being operated by the Kolb Coal Company of Mascoutah, the Marissa Coal & Mining Co., Marissa, is a new corporation and are now operating what was known as the Zildorph mine, also the White Oak mine at the same place, which is now designated as the Oak Ridge mine; the Madison Coal Company has changed the name of its No. 7 mine at Belleville and are now operating it under the old name, that of the Crown Coal & Iron Company No. 4, which originally opened up this mine.

The mine of the Belleville & O'Fallon Coal Company, Belleville, has been sold to the Humboldt Coal Co., but is being operated under the name of the old company. The principal owner of the old company is now deceased, and I was unable to get from the administrator of the estate a report of the coal produced by the company; the report of the mine in the table only shows the coal mined by the Humboldt Company.

The Richland mine at Belleville, owned by the Consolidated Coal Company, has been leased to Herman Pfuhl; this company has also leased its Gartside mine No. 4, Belleville, to the Johnson Coal Co.

#### MINES ABANDONED DURING THE YEAR.

The Consolidated Coal Co. has abandoned its mine at Trenton, Clinton county, also its mines Schurman and Rose Hill, at Belleville; two mines have been closed during the year, the Ruby mine, operated by William Ratican, at Caseyville, and the Dutch Hill Coal Co.'s mine at New Athens; both of these mines are in St. Clair county.

#### FATAL ACCIDENTS.

The following is a detailed account of the fatal accidents occurring in this district during the year:

July 21, 1904, Alexander McLean, sinker, aged 30 years, married, employed in sinking a shaft for the New Staunton Coal Co., Livingston, Madison county, was killed. McLean was being lowered, with other men employed, to the bottom of the shaft, the engineer lost control of the engine, the bucket falling suddenly to the bottom caused his death; the others were slightly injured. He leaves a widow.

July 25, 1904, George Bohlkamp, miner, aged 36 years, married, employed in Frank Sergeant's mine, near Belleville, St. Clair county, was instantly killed by falling slate. He leaves a widow and two children.

September 8, 1904, Jacob Reed, miner, aged 52 years, married, employed in the Crown Coal Co.'s mine No. 4, Belleville, St. Clair county, while mining off loose coal was instantly killed by falling slate. He leaves a widow and four children.

September 12, 1904, James Schneeberger, miner, aged 38 years, married, employed in Fred Murphy's mine, Belleville, St. Clair county, was instantly killed by falling slate. He leaves a widow and four children.

September 16, 1904, Eugene Kidd, mine examiner, aged 43 years, married, employed in the Mentor mine, operated by Joseph Taylor, O'Fallon, St. Clair county, was making an examination of the mine, before the men commenced work, and was instantly killed by falling clod. He leaves a widow and four children.

September 29, 1904, H. R. Manley, miner, aged 47 years, married, employed in Donk Bros. Coal & Coke Co.'s mine No. 1, Collinsville, Madison county, was instantly killed by falling clod. He leaves a wife and seven children.

October 1, 1904, Andrew Billpauch, machine runner, aged 29 years, married, employed in the Madison Coal Co.'s mine No. 4, Glen Carbon, Madison county, was instantly killed by falling slate. He leaves a widow and one child.

October 1, 1904, Thomas Funderburk, dumper, aged 25 years, married, employed at the Mt. Olive & Staunton Coal Co.'s mine No. 2, Staunton, Madison county, was killed by falling down the shaft. He was engaged in dumping coal at a temporary landing; in going back with the empty car to the cage he went to the wrong side of the shaft, and, as there was no protection, the car went down the shaft, dragging him with it. He leaves a widow.

October 22, 1904, John Krause, miner, aged 57 years, married, employed in the Madison Coal Co.'s mine No. 4, Glen Carbon, Madison county; was killed by a fall of coal knocking down a prop which struck him on the head and body causing his death. He leaves a widow and five children.

November 4, 1904, Charles Williams, machine helper, aged 20 years, single, employed in the DeCamp Coal Co.'s No. 1 mine, Staunton, Madison county, was killed by falling top coal and clod. He was a son of John E. Williams, State Inspector of Mines, for the Fourth district from 1897 to 1901.

December 9, 1904, Henry Quitmeyer, miner, aged 56 years, married, employed in the Breese & Trenton Coal Co.'s mine No. 2, Trenton, Clinton county, was fatally injured by falling clod, and died December 22. He leaves a widow and five children.

December 12, 1904, John Marchutte, miner, aged 56 years, married, employed in the Consolidated Coal Co.'s Heintz Bluff mine, was killed by falling clod. He leaves a widow and four children.

January 18, 1905, Edward Monroe, miner, aged 39 years, married, employed in the Lebanon Coal and Mining Association's mine, Lebanon, St. Clair county, was killed. After firing two shots, which had knocked out some props, he went back into the face to fire another shot, when a mass of soap stone fell on him, causing his death. He leaves a widow and five children.

January 18, 1905, Edward Grunz, miner, aged 40 years, married, employed in the Breese & Trenton Coal Co.'s mine No. 1, Breese, Clinton county, was killed by falling top coal. He leaves a widow and three children.

January 19, 1905, James Liddle, driver, aged 26 years, single, employed in the Consolidated Coal Co.'s mine, Trenton, Clinton county, was killed by a trip of loaded cars running over him.

February 6, 1905, Andy Yacup, miner, aged 29 years, married, employed in the new Staunton Coal Co.'s mine No. 1, Livingston, Madison county, was killed by falling slate. He leaves a widow and three children.

February 6, 1905, William Thomas, machine helper, aged 20 years, single, employed in the Lumaghi Coal Co.'s mine No. 2, Collinsville, Madison county, was killed by falling coal.

February 28, 1905, Tony Palo, miner, aged 29 years, married, employed in the Lumaghi Coal Co.'s mine No. 2, Collinsville, Madison county, was fatally injured by a trip of cars running over him. He died April 14, from the effects of the injury, leaving a widow.

March 1, 1905, Charles Shanual, miner, aged 56 years, married, employed in the St. Louis & O'Fallon Coal Co.'s mine No. 2, East St. Louis, St. Clair county, was killed by falling slate while working down loose coal. He leaves a widow and four children.

March 25, 1905, Joseph Issler, driver, aged 25 years, single, employed in the Crown Coal and Iron Co.'s mine No. 4, Belleville, St. Clair county, was caught between the door and the trip of cars, causing his death.

March 28, 1905, William Weiss, miner, aged 32 years, married, employed in the St. Louis & O'Fallon Coal Co.'s mine No. 1, East St. Louis, St. Clair county, was killed by falling slate. He leaves a widow.

April 4, 1905, Samuel Ogden, miner, aged 35 years, single, employed in Donk Bros. Coal & Coke Co.'s mine No. 1, Collinsville, Madison county, was killed by falling clod.

April 10, 1905, Roy Steele, miner, aged 25 years, married, employed in the Illinois Colliers Co.'s mine, Sorento, Bond county, was killed by the explosion of a shot. He leaves a widow and one child.

May 19, 1905, John Kutthner, miner, aged 47 years, single, employed in the Superior Coal Co.'s mine No. 1, near Belleville, St. Clair county, was killed by falling slate.

June 28, 1905, Louis Zedio, miner, aged 47 years, married, employed in Donk Bros. Coal & Coke Co.'s mine No. 1, Collinsville, Madison county, was killed by falling clod. He leaves a widow and seven children.

Respectfully submitted,

JOHN DUNLOP,

*State Inspector of Mines, Sixth District, Centralia, Ill.*

*Fatal Casualties—Sixth District—July 1, 1905.*

## SEVENTH INSPECTION DISTRICT—1905.

### TENTH ANNUAL REPORT.

(The seventh inspection district was formed in 1895, the first annual report was for the year ended June 30, 1896).

Counties—Franklin, Gallatin, Hamilton, Jackson, Jefferson, Johnson, Perry, Randolph, Saline, Washington, White, Williamson.

WILLIAM ATKINSON, *Inspector*, Murphysboro.

It becomes our sad duty to chronicle the death of William Atkinson, late State Inspector of Mines for the Seventh Mine Inspection District. Of the dangers to which this class of State servants are exposed, he was the first to lose his life while engaged in the performance of his duty. It was nearly noon, April 3, 1905, when he learned that the coal mine at Zeiglar, Illinois,

had been wrecked by a great gas explosion and that everyone in the mine had been killed. Hurrying to the place of the disaster he descended the mine in company with a few other brave men, for the purpose of recovering the dead bodies, and to rescue those whom they hoped might yet be living. While engaged in this most commendable undertaking he had, in his anxious search, stepped for a moment out of the line of the air current, was seized by the deadly after-damp, and died before his companions could reach him. Deceased was born Feb. 2, 1848 at Alnwick, England, and came to this country in 1862. Shortly after reaching New York he enlisted in the Union Army, joining Company K, New York Volunteer Infantry, and served with distinction until the close of the war. His honorable discharge bears the date of July 18, 1865.

After the close of the war he located at Murphysboro, Illinois, where he continued to reside. He was married to Zerilda Kilgore, at Harrisburg, Illinois, February 16, 1876. Of this union nine children were born, but three of whom are living. Mr. Atkinson was appointed July 1, 1901, by Governor Yates as a member of the State Board of Mine Examiners. He continued to serve in that capacity until July, 1904, when he succeeded Even D. John, as State Inspector of Mines for the Seventh District. Prior to his connection with the State Service he had served as mine manager for several coal companies in the Southern part of the State. While deprived in early youth of the advantages of an education, he possessed a bright observing mind, and accumulated a considerable store of information on a variety of subjects. Aside from his experience in the army, before coming to this country, he followed the occupation of a British sailor, and, in the line of that employment, had visited nearly every port in the world. His extensive travels gave him an intimate knowledge of human affairs and quickened his judgment of men. His was the positive type of character, combined with deep sympathy and most generous impulses. His disposition was extremely kind and he was never so happy as when performing a service for others. He was a member of several secret societies, and was buried with Masonic honors at Murphysboro, April 7, 1905. Those who enjoyed his acquaintance will long remember him for his many loving qualities of head and heart.

Owing to the untimely death of State Inspector Atkinson, the report of the condition of the mines in the district is necessarily quite limited. However, several of the operators have furnished descriptions of new plants that have been put in operation during the year.

The most noticeable event occurring in the district during the year was the terrific explosion in the mine of the Zeigler Coal Co., at Zeigler, Franklin county, April 3, 1905, whereby fifty men lost their lives. The explosion was the most disastrous to human life, with one exception, that has ever occurred in the history of coal mining in the State. The exception was the calamity that befell the Diamond Mine at Braidwood, February 16, 1883, wherein 69 men were drowned by the sudden flooding of water into that mine.

The explosion at the Zeigler mine was made the matter of special notice by Governor Deneen, who instructed the State Mining Board and the State Inspectors of Coal Mines to thoroughly investigate the cause and results of this explosion, and make an official report to him of their findings. The Governor also appointed James Taylor, Peoria, State Inspector of Coal Mines for the Third District, and John G. Massie, Belleville, ex-State Inspector, formerly of the Fifth District, as experts to prosecute a similar investigation and report thereon. The several reports of these investigations will be found in a foregoing special article in the text of this report on the explosion at the Zeigler mine.

#### NEW MINES.

The Majestic Coal and Coke Co., Duquoin, Perry county, has opened and equipped a new mine four and one-half miles southeast of Duquoin. The shaft is one and one-quarter miles south of the line of the Illinois Central R. R. from St. Louis, with a switch from the main line, having yard room for 100 coal cars. The sinking of this shaft was begun July 5, 1904, and completed in January, 1905; the depth of the shaft is 402 feet to a seam of coal 9¼ feet thick. The output of the mine is now from 1,200 to 1,400 tons a

day, and steadily increasing. The mine has a steel tower; the tower house is 45x49 feet; the engine room is 30x40 feet, with two hoisting engines, 24x26 inch cylinders, each 300 horse power, and conical drums 6x8 feet; there are two boilers, 6x18 feet, with heater attachment. The powder house is built of brick with a storage capacity for 2,000 kegs of powder; there is also a corrugated iron building with concrete floor, having tanks for storing oils. The machine and blacksmith shops are fully up to date, being fully equipped for doing all necessary work and repairs. A wash house for the men, heated by radiators and with all necessary conveniences is furnished; also a barn with forty stalls for miners' horses. A daily passenger train service to and from the mine is supplied. The mine is supplied with a Jeffrey shaker screen, having a 2,000 tons capacity, a Christy box car loader, two pair of 100 ton Standard scales, with 42 inch beams; one of the scales has an automatic weighing attachment. The ventilating fan is 20 feet in diameter, capacity 100,000 cubic feet per minute, made by the Blakeslee Manufacturing company, Duquoin. There are two self dumping cages; the mine cars hold  $1\frac{3}{4}$  tons of coal.

The Zeigler Coal Co., Zeigler, Franklin county, has furnished the following description of the property and equipment of its plant: There are 7,550 acres of coal land, with an average thickness of twelve feet of coal. The present coal hoisting mechanism was placed in operation June 8, 1904. The general surface equipment connected with the hoisting and operation of coal is as follows:

**Head Frame**—At the head of the shaft there is a steel head frame consisting of vertical steel columns strongly framed and braced together, provided with back stays, well anchored to the foundations, the stays forming a stairway for access to the top of the head frame. The head frame is of the double compartment type, arranged with steel guides for two hoisting buckets; the buckets are of the self dumping skip type, so arranged that they discharge their contents automatically at the top of the head frame into a large steel receiving bin, from which the coal flows down into the breakers or screens; the skips are attached to  $1\frac{1}{2}$  inch hoisting cables. The head frame is equipped with two 8-foot sheave wheels; the vertical distance from the top of the foundation of the head frame to the center of the sheave wheels is 125 feet.

**Hoisting Engines**—The hoisting plant consists of a pair of bored guide heavy balanced slide valve engines, coupled at right angles to one shaft: the engines are fitted with a Stephenson link reverse motion. The drums are fitted with a heavy brake band operated by means of double connections to hand reverse on operating platform.

**Automatic Dumping Skips**—The plant is equipped with two automatic dumping skips 5 feet 11 inches square, by 9 feet  $11\frac{3}{4}$  inches deep; the hoisting bails of each skip are provided with safety release catches, whereby, in case of overwinding, the end of the hoisting cable is released from the skip and is automatically held up by means of hooks at the top of the head frame. At the bottom of the shaft the coal from the pit cars is dumped into an eighty ton receiving bin, the coal being discharged from the receiving bin into the hoisting skips.

**Revolving Tippler**—The coal from the pit cars is dumped by means of a revolving tippler, consisting of four steel rings forming bearing rollers, upon which the tippler rolls; two cars are dumped at a time.

**Breaker Building**—The breaker building is of fire proof steel construction, about 60x80 feet, and 100 feet high, and is equipped with 12 and 9 foot Bradford patent coal breakers. The coal from these breakers is discharged in its prepared state by means of conveying chutes, into cars below, or transferred to an 800 ton storage bin by means of a 140 foot belt conveyor; the breakers and belt conveyor are operated by electric motors.

**Power Plant**—The boiler room is equipped with four 400 horse power Heine water tube boilers; these boilers are equipped with automatic stokers; one boiler is provided with Green traveling link grates; one grate is 7 feet wide by 9 feet deep; this grate has a flat hanging igniting arch, consisting of steel cross girders, supporting on their lower flanges, laterally adjustable cast iron beams, between which special tile is suspended. The boilers are

connected up to a steel concrete breeching, which, in turn, is connected to a steel concrete chimney, 153 feet high, inside diameter 6 feet. All the water pumped into the boilers is passed through a Pittsburg feed water heater.

**Compressors**—The air plant consists of three class G Ingersoll-Sergeant steam driven duplex air compressors, with simple steam and cross compound air cylinders, of the piston inlet type, and a special improved receiver inter-cooler, the compressors are provided with the Meyer adjustable steam cut-off, and with an automatic airball governor.

**Electrical Equipment**—The electrical equipment consists of three Edison Bi-Polar Generators operating at 250 volts. These generators are driven by a 500-horse-power Bass Corliss engine, built with a driving wheel 18 feet in diameter; this equipment furnishes power for the mine, electric lights for the streets, houses, and power for the ice plant. The engine room is supplied with a ten-ton traveling crane, equipped with a Pilling air engine hoist.

**Ventilating Fan**—The ventilating fan is a 16 foot Robinson pattern, capable of delivering 200,000 cubic feet of air into the mine per minute.

**Machine Shop**—A brick machine shop 40 x 100 feet is situated just north of the power house, and is equipped with lathe, pipe machines, bolt machine, radial drill, bull-dozer, punch and shear, trip hammer, band saw and a wood turning and cutting machine. The wood working shop is prepared to rapidly turn out pit cars.

**Miners' Houses**—There are 115 houses, running in size from three to six rooms; three room houses rent for \$6.00 per month, including water; four room houses rent for \$7.00; five room houses for \$8.00 and six room houses for \$9.00, with water.

**Miners' Comfort**—A concrete wash house is provided, having 285 lockers, hot and cold water, with tub and shower baths.

An ice plant has been erected, provided with an electrically driven 15-ton refrigeration.

The store building is equipped with a cold storage room capable of holding two carloads of meat, the store has about 7,000 square feet of floor area.

The mine is connected with the Illinois Central Railroad and Iron Mountain & Southern Railway by the Chicago, Zeigler & Gulf Railway.

The town is supplied by a complete water system, the supply of water being pumped from the big muddy river. The office is a two story brick building.

The hospital is a one story frame structure with basement, and will accommodate from twelve to thirty patients, according to the necessity that may arise, and will at present accommodate twenty-six. It is well equipped and modern in all respects.

The schoolhouse is a new fire-proof concrete building, having four rooms, halls, etc., and is capable of accommodating 200 pupils; the instructions given are as good as the best in the State.

The Equitable Coal Co., Duquoin, Perry county, has erected a new steel tower.

The Forester Coal Co., Duquoin, has put in a new engine 20 x 36 inch cylinders, a conical drum 8 feet in diameter; the boilers are 6 x 18 feet with seventy 4-inch flues. The fan is of the Guibal pattern, 20 feet in diameter.

#### FATAL ACCIDENTS.

There were seventy-nine men killed in this district during the year, fifty of whom lost their lives by the explosion at the mine of the Zeigler Coal Company, April 3, 1905. Owing to the death of State Inspector Atkinson, the detailed circumstances leading up to the causes of these fatalities are not as complete as is usually reported to the Bureau by the State inspectors. However, the Zeigler Coal Company has reported direct to the Bureau a carefully prepared list of the names of the killed by the explosion April 3, 1905, giving all the information possible to be obtained as to the nativity, residence and conjugal relationship of each man killed. Of the forty-nine men employed at the Zeigler mine losing their lives by this calamity, the bodies of forty-one were recovered and identified, while eight are reported as

missing, or their remains, if found, unrecognizable, therefore unidentified. The bodies of thirty of these unfortunates, identified, were buried at Zeigler, while eleven bodies were shipped to other places for burial. The occupation of the forty-nine killed or missing, forty-six have been given in the table following as that of miner, as no report was made as to their occupation, the ages were not ascertained; the place of burial, nativity, and the conjugal and family relationship so far as could be discovered, are given as follows:

Aured, C. O., buried at Zeigler, father living, no other near relatives known.

Baxter, William, mine manager, was buried at Ladd, Illinois, leaving a widow and one child, a daughter.

Baxter, William A., buried at Ladd, Illinois, leaving a widow.

Babincak, Mike, buried at Zeigler, leaving a widow and two children in Maltza, Hungary, Austria.

Babincak, Paul, buried at Zeigler, leaving a widow and three children in Maltza, Hungary, Austria.

Brunlick, Gustaff, buried at Zeigler, leaving a father and mother, possibly also brothers and sisters.

Campbell, Rolla, buried at the Harrison Cemetery, leaving a widow, no children, at Christopher, Illinois.

Davis, Robert T., single, buried at Coulterville, leaving parents and one brother.

Dombay, Ivan, single, buried at Zeigler, native of Nagy Kanisa, Hungary, leaving a brother in New Washington, Pennsylvania.

Dudas, Emerick, buried at Zeigler, leaving a widow and one child in Maltza, Hungary.

Dudas, John, buried at Zeigler, leaving a widow and three children in Maltza, Hungary.

Fedorka, Jonas, buried at Ziegler, leaving a widow and three children, address unknown.

Geisler, Joseph, single, buried at Zeigler, leaving mother and brothers and sisters, residence of family unknown.

Graham, John, mine examiner, was one of the rescuing party, and was overcome by after-damp. He was buried at Zeigler, relatives, if any, unknown.

Hare, Robert, buried at Greensburg, Penn., leaving a widow.

Haydukovic, Valent, buried at Zeigler, leaving a widow and four children in Carola Croatia, Hungary.

Jankowich, Peter, buried at Zeigler, leaving a widow, previously deserted, residence unknown, also a cousin in Philadelphia, Penn.

Jones, Everett, single, buried at Mulkeytown, Illinois, the home of his parents.

Koski, Capi, buried at Zeigler.

Koski, John, buried at Zeigler, nothing known of the relatives of these two men.

Kostick, Andrew, buried at Zeigler, leaving a widow and one child in Berek, St. Miklos county, Hungary.

Kostick, Frank, buried at Zeigler, leaving a widow and one child at the same address as the one previous.

Kowach, B., buried at Zeigler, leaving a widow and three children at Mandock, Hungary.

Kowachich, Ivan, single, buried at Zeigler, relatives at Nagy, Kanisa, Hungary.

Lindsey, John, one of the rescuing party, was overcome by the after-damp, was buried at Mulkeytown, Illinois. Nothing given as to family.

Lovrek, Mike, single, Austrian, buried at Zeigler; relatives unknown.

McKenzie, Andrew, buried at Zeigler, leaving brothers and a sister.

McKenzie, William, buried at Zeigler, leaving a widow and four children; location not given.

Macky, Oscar, buried at Zeigler, single, relatives unknown.

Moretti, David, buried at Zeigler, single, cousin, 623 N. 6th St., St. Louis, Mo. Parents in Milan, Italy.

Perryman, Frank, buried at Zeigler, deserted wife in Jackson, Miss. seven years ago, relative of Dr. Stam, Holly Springs, Miss.

Rayburn, James, buried at Carterville, leaving widow and one child at that place.

Rabby, A., buried at Zeigler, leaving widow residing at Witnyed, county Sopron, Hungary.

Robinson, C. B., buried at Crawfordsville, Indiana, leaves a widow at that place.

Sabolich, Steve, buried at Zeigler, leaving a widow and two children in Godala, Croatia, Hungary.

Semivan, Louis, buried at Zeigler, leaving a widow and two children in Nagy, Kanisa, Hungary.

Sloh, Joseph, buried at Zeigler, single, an Austrian-Pole, relatives in that country.

Tinan, David, buried at Zeigler, single, leaves a brother and sister, residence unknown.

Vinar, George, buried at Zeigler, single, relatives living in Pothering county, Borek, Hungary.

Withrow, H. M., buried at Newton Upper Falls, Mass., leaving brother and sister at that place.

Wood, J. O., was killed while working in the tower for a Construction Company, was buried at Cleveland, Ohio; nothing known of relatives.

The bodies of the following eight men were not recovered or were not identified:

Canfield, Mike, leaves a widow and six children, who will remove to Sheffield, Illinois.

Ipsan, Stif., leaves a widow and two children in Velika Croriza, Croatia, Hungary.

Maros, John, single, home same as preceeding.

Mikesie, T., leaves a widow, whereabouts unknown, native of Croatia, Hungary.

Nolan, J. T., leaves a mother.

Rashance, Mike, leaves a widow and one child in Torchich, Croatia, Hungary.

Roper, John, leaves a widow and four children in Chisholm, Minnesota, where he owned property.

Suke, Mike, single, so far as known, a native of Austria.

William Atkinson, State Inspector of Mines for the Seventh District, whose home was at Murphysboro, led the first rescuing party to enter the mine, and was soon overcome by gas or after-damp.

Following will be found the tables of the fatal and non-fatal accidents, also the usual county tables, giving the detailed information, of the coal mining industry of the district:

*Fatal Casualties—Seventh District—July 1, 1905.*

REGISTER OF CERTIFICATED—  
MINE MANAGERS.  
HOISTING ENGINEERS.  
MINE EXAMINERS.

---

Illinois Free Employment Offices  
SEVENTH ANNUAL REPORT.

---

---

## MINE MANAGERS HOLDING CERTIFICATES OF COMPETENCY.

NOTE—This list includes all the mine managers to whom certificates have been issued prior to Jan. 1, 1906.

The names which are printed in *italic* are those who hold both certificates of service and subsequent certificates of competency acquired through examination.

The names which are followed by the abbreviation "ex." are those who have exchanged certificates of service for those of competency, without examination, under the provisions of the amendment of 1895. Names followed by the letter "d" are deceased.

The postoffice addresses here given, and in all the lists following, are those recorded at the time the certificates were issued, and in many cases are not the present addresses of the certificate holders.

## MINE EXAMINERS HOLDING CERTIFICATES OF COMPETENCY.

NOTE—The revised mining law of 1899 changed the title or name "Fire Boss" to that of "Mine Examiner," and provided that those holding certificates as Fire Boss could exchange the same for that of Mine Examiner.

The names followed by the abbreviation "ex." have made such exchange, those by "d" are deceased.

SEVENTH ANNUAL REPORT

OF THE

Bureau of Labor Statistics

OF THE

ILLINOIS

Free Employment Offices

FOR THE

Year Ended October 1, 1905.

(Established August 2, 1899.)

---

DAVID ROSS, Secretary, Springfield.

SPRINGFIELD:  
ILLINOIS STATE JOURNAL CO., STATE PRINTERS.

1906

## INTRODUCTION.

---

The report for this year shows a substantial and gratifying increase in the number of applications for employment and help, and in the number of positions obtained. Compared with the record for the year preceding the increase numbers 7,830 for employment and 7,874 placed in positions. While the primary purpose in establishing these offices was to aid the common or unskilled laborer in getting work without cost to him or her, their influence has not been limited to that class. The offices are open and available for all people in need of employment. That the opportunities afforded by them have been taken advantage of by those following more specialized occupations will appear upon reference to the table relating to skilled and unskilled labor. From this it is shown that nearly 8,000 people, representing established skilled trades, including commercial and professional pursuits, have secured positions during the year. When it is remembered that the free offices have neither the time nor the means to publicly or personally solicit or place men who have qualified themselves for employment requiring technical ability, the showing made is quite creditable. When the facilities offered by such offices in this direction become more generally known they will be in a better position to meet the demands of the higher and more specialized grades of employment. The modern tendency to specialization is very apparent in this as in other lines of enterprise. The better class of private employment agencies will accept only applications for a certain service, mainly of a professional character. Committed to meet the wants of a particular class all their attention in soliciting applications from firms in need of such help, in looking up references, advertising, etc., etc., is devoted to that purpose. It is not to be expected that offices engaged as those of the State are, in the business of supplying general help, can do much along special lines. To attempt to encourage specialties would in effect diminish their usefulness, and in a measure frustrate the purpose for which they were organized.

There is more or less security in an established trade or profession. When industrial fluctuations take place, it is the common or unskilled workman who is first affected, his services as a rule can be easier and more readily dispensed with; thus it becomes the special concern of the State, through its offices, to render such classes all possible assistance.

We regret having to record the death of two of the officers of the Peoria Free Employment Office—Mr. Charles Easton, Assistant Superintendent, after a brief illness died February 6, 1905; and Mr. Edward E Walker, Superintendent, March 11, 1905. Mr. Walker had been a sufferer for several months, and his death was not unexpected. Both men were efficient and faithful workers in the line of their duties, laboring to establish and advance the practical usefulness of the office over which they had charge.

# SEVENTH ANNUAL REPORT.

## OF THE

# Illinois Free Employment Offices,

## 1905.

(Established August 2, 1899.)

The work accomplished by the Illinois Free Employment offices for the year ended October 1, 1905, is presented in this, the seventh annual report.

The summing up of the business transacted by these offices for the year is presented in the following table:

**TABLE 1—Showing the Combined Business of the Four Offices for the Year Ended October 1, 1905.**

OFFICES. (Three in Chicago, one in Peoria.)	APPLICATIONS FOR EMPLOYMENT.			APPLICATIONS FOR HELP.	
	Number filed.	Number positions secured.	Number unfilled.	Number filed.	Number unfilled.
North Side Office—Males .....	4,257	4,216	41	4,603	387
North Side Office—Females.....	3,874	3,809	65	4,810	1,001
Totals.....	8,131	*8,025	106	9,413	1,388
South Side Office—Males.....	9,142	8,622	520	9,777	1,155
South Side Office—Females.....	4,260	4,083	177	5,185	1,102
Totals.....	13,402	†12,705	697	14,962	2,257
West Side Office—Males .....	13,329	10,010	3,319	10,034	24
West Side Office—Females .....	2,784	2,030	754	2,923	893
Totals.....	16,113	12,040	4,073	12,957	917
Peoria Office—Males .....	5,345	4,804	541	4,937	133
Peoria Office—Females .....	2,332	2,024	308	2,308	284
Totals.....	7,677	6,828	849	7,245	417
Total Males—Four Offices .....	32,073	27,652	4,421	29,351	1,699
Total Females—Four Offices .....	13,250	11,946	1,304	15,226	3,280
Grand totals .....	45,323	‡39,598	5,725	44,577	4,979

\*Of this number 191 males and 113 females, a total of 304 were secured positions on applications filed last year.

†Of this number 16 males and 128 females, a total of 144 were secured positions on applications filed last year.

‡Of this number 207 males and 241 females, a total of 448 were secured positions on applications filed last year.

The total number of persons registering, seeking places to work, was 45,323; of this number 32,073, or 70.77 per cent, were males, and 13,250, or 29.23 per cent, females; the total number is augmented by 448; males 207, females 241, being applications on file and brought forward from the previous year, so that the total number of applications handled during the year was 45,771.

The following table of percentages gives a more explicit reading of the work of each of the four offices regarding both male and female applicants and the positions secured both sexes:

TABLE 2—Percentages of Applicants for Employment and for Help, and Positions Secured by Each of the Four Offices for the Year.

(OFFICES.	PERCENTAGE OF—					
	APPLICATIONS FOR EMPLOYMENT.		APPLICATIONS FOR HELP.		POSITIONS SECURED.	
	Males.	Females.	Males.	Females.	Males.	Females.
North Side Office .....	52.36	47.64	48.90	51.10	52.54	47.46
South Side Office .....	68.21	31.79	65.35	34.65	67.86	32.14
West Side Office.....	82.72	17.28	77.44	22.56	83.14	16.86
Peoria Office.....	69.63	30.38	68.14	31.86	70.36	29.64
The four offices .....	70.77	29.23	65.84	34.16	69.83	30.17

This is the largest number registered during any one year since the organization of these offices; of this number 83.23 per cent was filed in the three Chicago offices.

The number for whom positions were secured is larger than for either of the past two years, and was only exceeded in 1902; the total number this year is shown to be 39,598; of this number 27,652 or 69.83 per cent were males, and 11,946 or 30.17 per cent, females. These proportions vary but a fraction from those shown for applications for employment.

The total number of applications registered by employers seeking help was 44,577; of this number 29,351, or 65.84 per cent, were for males, and 15,226 or 34.16 per cent for females. The total number registered was nearly 8,000 more than last year.

The results accomplished by each of the four offices are better shown in a table of percentages, giving the proportion of both male and female applicants who were placed in positions; also the corresponding information as to help supplied to employers:

**TABLE 3.—Percentages of Positions Secured and Percentages of Help Furnished, both Male and Female.**

OFFICES.	PERCENTAGE OF POSITIONS SECURED APPLICANTS FOR EMPLOYMENT.			PERCENTAGE OF APPLICATIONS FOR HELP FURNISHED.		
	Males.	Females.	Both Sexes.	Males.	Females.	Both Sexes.
North Side Office.....	99.04	98.32	98.70	91.59	79.19	85.25
South Side Office.....	94.31	95.85	94.80	88.19	78.75	84.92
West Side Office.....	75.10	72.92	74.72	99.76	69.45	92.92
Peoria Office.....	89.88	86.79	88.94	97.31	87.69	94.24
The four offices.....	86.22	90.16	87.37	94.21	78.46	88.83

Observing the Chicago offices, it will be seen that the North Side office secured positions for the largest proportion of both male and female applicants for positions. The West Side office supplied employers with the largest per cent of applications for male help, while the Peoria office furnished the largest percentage of females to employers, and combining both males and females, supplied a larger per cent than either of the other offices.

Considering the work of all the offices in securing positions for those desiring work during the year, the percentages show a decided increase in efficiency over last year. Regarding the supplying of help to employers a similar increase is shown, excepting the furnishing of female help, which shows a slight decrease; altogether the work performed by all the offices presents very satisfactory results.

To bring out fully and in compact form the work accomplished by these offices, since their establishment, a series of tables are introduced, showing for the six complete years, from Oct. 1, 1899, to Oct. 1, 1905, the extent of the business in hand and completed in each year during the period named. The first presentation is arranged by classified occupations, and by years, giving the number

of applications, both for employment and for help, also the number of positions secured, with the percentages of positions secured to both classes of applicants:

TABLE 4—*Classified Occupations (Male and Female) with percentages—for Six Years.*

SEX AND CLASSES OF OCCUPATIONS.	Number of occupations in each class.	NUMBER OF APPLICATIONS FOR -		Number of positions secured.	PERCENTAGES OF POSITIONS SECURED FOR—	
		Employment.	Help		Applicants for employment.	Applicants for help.
Males—totals six years	...	151,196	142,208	128,123	84 74	90 10
NOT CLASSIFIED.	...	...	...	4,965	...	...
AGRICULTURAL	...	7,306	7,629	6,459	88 42	84 66
1900	5	962	1,008	919	95 59	91 17

That this exhibit may be correctly understood, it is to be noted that the first annual report (1899), to conform to the fiscal year provided in the law, covered only a period of nine weeks, from Aug. 2, to Sept. 30, 1899; while in the third annual report (1901), the Peoria office represented but three months of its business, namely, from July 1 to Sept. 30, of that year. By reference to the table it will be seen that the showing is for six complete years, with the fractional years referred to omitted. The record is that of 233,472 persons registered in these offices for places to work, during these six years; this is an average of 38,912 for each year. Of the total number registering for places 151,196, or 64.76 per cent were males, and 82,276, or 35.24 per cent females.

The total number of places secured during the six years to those applying for positions was 204,714, being an average of 34,119 for each year; of this total number 128,123, or 62.59 per cent were males, and 76,591, or 37.41 per cent were females.

The highest percentage of positions secured for males was in the class of manual laborers, for females in that of domestic service.

Table 4 is summarized in three additional tables: the first showing, by years, the number of applications for employment registered each year by both sexes; the number of positions secured to each, and the number unfilled. To these tables are added the fractional years, heretofore referred to, making a complete record of all the business transacted during the entire time these offices have been in operation.

SKILLED AND UNSKILLED LABOR.

An arbitrary division as to skilled and unskilled labor has been made from Table 4, which is presented for the six years in the following tables:

TABLE 8—*Skilled Labor, Males and Females, [Number of Applicants for Employment and Help. Positions Secured, with Percentages for Six Years.*

CLASSIFICATION, SKILLED.	NUMBER OF APPLICANTS. FOR—		Number of Positions Secured.	PERCENTAGES OF POSITIONS SECURED. For—	
	Employ- ment.	Help.		Employ- ment.	Help.
Six years—Males.....	22,937	13,766	11,092	48.36	80.57
Clerical.....	2,787	868	833	29.89	95.97

Professional.....	189	89	83	43.92	93.26
Trades .....	14,283	9,130	7,335	51.35	80.34
Six years—Females.....	5,151	4,195	2,831	54.96	67.49
Clerical.....	1,619	549	481	29.71	87.61
Commercial.....	1,181	1,072	576	48.77	53.73
Professional .....	1,547	1,492	1,175	75.95	78.75
Trades .....	804	1,082	599	74.50	55.36

TABLE 9—*Unskilled Labor, Males and Females—Number of Applicants for Employment and Help—Positions Secured, with Percentages for Six Years.*

CLASSIFICATION, UNSKILLED.	NUMBER OF APPLICANTS. For—		Number of positions secured.	PERCENTAGES OF POSITIONS SECURED. For—	
	Employ- ment.	Help.		Employ- ment.	Help.
Six years—Males.....	128,259	128,442	112,066	87.37	87.25
Agricultural.....	7,305	7,629	6,459	88.42	84.66
Domestic Service.....	21,845	19,274	18,172	83.19	94.28
Manual Labor.....	66,008	74,102	63,681	96.47	85.94
Transportation.....	11,541	9,961	8,830	76.51	88.65
Miscellaneous .....	21,560	17,476	14,924	69.22	85.40
Six Years—Females.....	77,125	92,105	71,265	92.40	77.37
Domestic Service.....	72,889	85,965	67,717	92.90	78.77
Personal Service.....	111	50	40	36.34	80.00
Miscellaneous.....	4,125	6,090	3,508	85.04	57.60

Referring to table 8 it will be seen that the demand for male employes in skilled labor met with a supply equal to 80.57 per cent, while for those seeking employment in this class less than one-half secured positions. For females the demands by both employes and employers are more evenly divided. However, the total number in both classes, employes and employers, is a very small proportion of the whole number considered.

For the so-called unskilled labor presented in table 9, the numbers and percentages show a very even division as to both employes and employers.

APPLICATIONS FOR EMPLOYMENT.

The detailed work of the four offices for the year is presented in a series of tables that follow. The first showing is the applications registered by persons seeking positions. These are shown separately for males and females; the classification of occupations for males, shows 180 different vocations registered and fifty-four for females.

TABLE 10. Work of all the Offices—Three in Chicago, One in Peoria Receiving Applications for Employment.

Comparing the number of males registering at the different offices, it will be seen that the West Side office accounts for 13,329 applicants, this number is almost equal to the applicants of both the North and South Side offices combined. This is explained by the very large number of laborers filing applications at the West Side office.

For females the number of applicants for employment shows a more even distribution among the different offices.

APPLICATIONS FOR HELP.

The number of employers seeking help at the several offices is presented in the following table:

TABLE 11--*Work of All the Offices—Three in Chicago, One in Peoria—Receiving Applications for Help.*

The classification as to occupations shows 147 for males and forty-seven for females.

POSITIONS SECURED.

The ultimate and most important purpose of these offices is reached by securing positions for the large number of persons seeking work of various kinds, through the medium thus provided by the State. These results are shown in the following table:

TABLE 12—Work of all the Offices—Three in Chicago and One in Peoria—Securing Positions.

The first line in the table shows the total number of persons placed in the several occupations by each of the offices.

The total number for whom positions were secured was 39,598, of these 27,652, or 69.83 per cent were males, and 11,946, or 30.17 per cent were females.

Observing the different occupations for males, and the number securing places, it will be seen that applicants of laborers are far in excess of any other occupation; they account for 56.86 per cent of the total number. Directing attention to the occupations of females, it

is found that positions were secured for 80 per cent of the total number desiring work in what may be termed domestic or household service, such as chambermaids, cooks, day workers, dining room help, dishwashers, domestic service, general house work, housekeepers, kitchen work and waiters. However, the next table presented gives the total number of both applications for employment and help, with the number of positions secured, by the four offices combined, also the percentages of positions secured for both classes of applicants:

TABLE 13—*Number of Applications for Employment, Applications for Help, Positions Secured, also Percentages of Positions Secured Applicants for Employment and Applicants for Help—Four Offices.*

Attention is directed to the last two columns of the table; here is shown the completed work of these offices. Out of the total number of applicants for employment 87.37 per cent were placed in positions, while 88.83 per cent of the employers were supplied with the help

sought for. The number of men applying for work as ordinary laborers and railroad laborers, is shown to be 16,242, or 50 per cent of the total number making application for places. Of this number 15,722, or 96.80 per cent, were furnished with positions to work.

In the classification of occupations, it has been the endeavor of the superintendents to diminish the number of classes, and show in a more contracted form the list of applicants, both for employment and for help, but the number increases rather than decreases. However, as in former reports, a selection has been made of the leading occupations of both sexes, as shown in the following table, reducing the number to twenty-eight occupations for males and twenty for females:

TABLE 14—Summary of the Leading Occupations, Showing Applications for Employment and Help, With Percentages.

20	Waitresses.....	548	721	496	90.51	68.79

The twenty-eight occupations of males in this table accounts for 27,872, or 86.9 per cent, of the total number making applications for employment; 25,959, or 84.44 per cent, of employers wanting help; and 24,443, or 88.4 per cent, of those placed in positions. Of the twenty occupations shown for females, the table gives 11,596, or 87.52 per cent, of the total number seeking employment; 13,038, or 85.63 per cent, of employers; and 10,202, or 85.4 per cent, for whom positions were secured.

There is a very slight difference shown in the percentages of the totals as to both sexes.

The classification of all of the occupations is presented under nine different callings for males and seven for females. The number of applications for employment, and for help, also the number of positions secured, with the per cent that each occupation bears to the total number in the class. The table follows:

TABLE 15—Classified Occupations of Applicants for Employment, Positions Secured and Applications for Help, in the Four Offices, with Percentages in Each Class.

7	Miscellaneous.....	12	855	6.45	731	6.24	1,120	7.36

It will be seen that of the male applicants 16,243, or 50.64 per cent were registered for manual labor. The increase for positions in this class is nearly 6,000, or 55 per cent over last year. The total number of male applicants for employment shown in the classified list was 32,073; omitting the number included as miscellaneous, we have 27,289 in the eight classes, of this number 23,974, or 87.85 per cent were secured places.

Considering the females applying for employment, and omitting the miscellaneous class, it is found that of the 12,395 applicants in the six classes, 10,974, or 88.53 per cent were given positions.

The percentages of positions secured, in each class, of the number applying for employment, and the number applying for help, for both males and females, are shown in the following table, computed from the foregoing table:

TABLE 17—*Percentages of Positions Secured to Employee and Employer.*

OCCUPATIONS.	MALES.		FEMALES.	
	PERCENTAGES—POSITIONS SECURED FOR—		PERCENTAGES—POSITIONS SECURED FOR—	
	Employee.	Employer.	Employee.	Employer.
Agricultural .....	86.94	88.52	.....	.....
Clerical .....	44.55	97.97	35.77	89.09
Commercial .....	77.28	79.62	69.82	68.88
Domestic service .....	85.77	97.18	90.51	78.17
Manual labor .....	96.79	94.34	.....	.....
Personal service .....	.....	.....	30.00	75.00
Professional .....	61.54	88.88	80.93	77.68
Trades .....	55.50	84.60	78.87	61.20
Transportation .....	79.19	99.05	.....	.....
Total .....	87.85	93.56	88.53	77.80

Referring to the proportion of positions secured for both sexes in all of the occupations a very slight difference will be noticed. For males the range is from 44.55 per cent in clerical service to 96.79 per cent in manual labor; for females, from 30 per cent in personal service to 90.51 per cent in domestic service. As to the employers of labor it is shown that 93.56 per cent applying for male workmen were supplied, the range being 79.62 per cent in commercial service to 99.05 per cent in transportation employments. In securing the services of females the proportions are notably less, the range being from 61.20 per cent in trade occupations to 89.09 per cent in clerical work, and 77.80 per cent for all classes of occupations.

## AGE PERIODS OF APPLICANTS.

In the table following is presented the age periods for applicants seeking employment at the four offices. These are arranged by the different classifications of occupations and for both sexes:

TABLE 18—*Age Periods of Applicants, by Classified Occupations.*

Observing the first line in the table it is shown that, of the total number, 352 have no report of their age; deducting this number from the total, we have 31,721 persons enumerated under the different age periods, of whom 11.85 per cent were under 20 years of age; 42.19 per cent, 20 but under 30 years; 31.02 per cent, 30 but under 40 years; 12.32 per cent, 40 but under 50 years; 2.31 per cent, 50 but under 60 years, and less than one-third of 1 per cent over 60 years.

Referring to the total number of females there were 698 failing to report ages; deducting this number we have a total of 12,552 under the several age periods. Of the total number their ages are shown, as follows: 19.43 per cent under 20 years of age; 37.05 per cent, 20 but under 30 years; 27.25 per cent, 30 but under 40 years; 12.20 per cent, 40 but under 50 years; 3.44 per cent, 50 but under 60 years, and less than two-thirds of 1 per cent 60 years and over.

The only marked difference in the proportion of the sexes, under the several age periods shown, is of those under 20 years of age, the females being about 8 per cent more than the males.

The following table is a summary of the preceding table:

TABLE 19—Summary of Age Periods of Applicants, by Classified Occupations.

The four lines at the head of this table gives the totals and percentages of the number in the different age periods.

## CONJUGAL CONDITIONS.

The conjugal relationship of the applicants for positions, both sexes, also the number belonging to trade unions, the average days of lost time, and the number willing to accept work outside of the two cities, are shown in the following table:

**TABLE 20.--Conjugal Conditions. Members of Trade Unions. Days Idle, and Number Willing to Accept Work Out of City.**

Number.	SEX AND CLASSIFICATION OF OCCUPATIONS.	CONJUGAL CONDITIONS.			Number members of trades unions.	Average days idle.	Number willing to work out of city.
		Number married.	Number single.	Number of dependent children.

Trades.....	5	194	81	113	46	1	3	9
Miscellaneous.....	12	855	385	470	37	16	9	57

The first two lines at the head of the table gives the totals under the different headings, and the next two lines show the percentages. Of the males 24.75 per cent were married, and 75.25 per cent single;

the females show 38.82 per cent married and 61.18 per cent single. The married men report 8,928 dependent children, which signifies slightly over two members to each family; of the females 70 per cent reported having dependent children. Less than 5 per cent of the males and 1 per cent of the females were members of trade unions. The average days of lost time were eleven for males and seven for females. Those of the males signifying a willingness to accept positions outside of the cities, constitute 50 per cent of the total. Of the females 1,953 or only 14.74 per cent agreed to accept work outside of the cities; of this number of females, however, 1,760, or 90 per cent registered for places in domestic service.

#### NATIONALITY

The final presentation is that of the nationality of the applicants for employment, this showing is also under the classified form, and is shown in detail as to occupations in table 22. This is followed by a recapitulation presented in table 23. Referring to this recapitulation it will be seen that of the total number of males 1,786 are grouped as miscellaneous and not reported; this leaves 30,287 answering the question as to nationality.

The classification represents eighteen nationalities, four of these account for 72.68 per cent of the total stated, as follows: American, 38.90 per cent; Germans, 18.11 per cent; Irish, 8.15 per cent; Swedes, 7.52 per cent; leaving 27.32 per cent distributed among the other fourteen classes.

Referring to the females the four nationalities mentioned represent 82.58 per cent of the total number, to-wit: Americans, 39.89 per cent; Irish, 18.09 per cent; Germans, 13.92 per cent; Swedes, 10.68 per cent; leaving 17.42 per cent to the other fourteen nationalities.

WEST SIDE FREE EMPLOYMENT OFFICE, CORNER CANAL AND  
RANDOLPH STREETS, CHICAGO.

---

SEVENTH ANNUAL REPORT, FOR THE YEAR ENDED SEPT. 30, 1905.

(S. P. REVERE, Superintendent.)

HON. DAVID ROSS,

*Secretary Bureau of Labor Statistics, Springfield, Illinois.*

SIR—In compliance with section six of the act of the General Assembly, creating the Illinois Free Employment offices, I herewith submit the seventh annual report of the business transacted in this office for the year ended Sept. 30, 1905, together with the expense account for maintaining the office for the same period.

The report shows a great increase in the number of applications for help, also for positions secured applicants for employment, over previous years. This in a great measure is due to the fact that we have been called upon to furnish the entire system of the Chicago & Northwestern Railway with laborers, through its labor agent, Mr. T. S. Bertrand.

We have furnished a great many laborers to other railroads, and have during the past year received applications for help from all over the city and State, also a great many requests come from outside of the State even as far as California. During the past six months we have been unable to supply the demand made for laborers, and, while there has been a slight decrease, the demand will undoubtedly be renewed and continue indefinitely.

The past year we have succeeded in compelling several private employment agencies to return money obtained from applicants for positions when they had refused to do so after the legal limit had expired. In this connection I desire to suggest that to make this office more effective all private employment agencies located on the west side of Chicago be put under the control of this office. Any violation of the law by any agency located on this side of the city should be prosecuted by this office. If this authority is given to this office, I will be able in a very short time to eradicate from the west side, all of the private employment agencies that are being conducted unlawfully.

Respectfully submitted,

S. P. REVERE,  
*Superintendent.*

Expense Account from Oct. 1, 1904, to Sept. 30, 1905.

PEORIA FREE EMPLOYMENT OFFICE—PEORIA, ILLINOIS.

---

FIFTH ANNUAL REPORT FOR THE YEAR ENDED SEPT. 30, 1905.

(D. E. Conigisky, Assistant Superintendent.)

HON. DAVID ROSS,

*Secretary Bureau of Labor Statistics, Springfield, Illinois.*

SIR—In compliance with section six of the act of the General Assembly of the State, creating the Illinois Free Employment offices, I herewith submit the fifth annual report of this office for the year ended Sept. 30, 1905, together with an itemized statement of the expenses for maintaining the office for the year.

The report shows a material increase in the number of positions secured for the unemployed, demonstrating that work has been reasonably plentiful and that the people have confidence in the Free Employment Agencies of this State.

Respectfully submitted,

D. E. CONIGISKY,

*Assistant Superintendent.*

Statement of the Expenses of the Peoria, Illinois Free Employment Office for the Year Ended Sept. 30, 1905.
